10/26/2021

Representatives of the Instituto Colombiano Agropecuario,

We are pleased to have the opportunity to introduce the qualifications of Agdia Incorporated on behalf of Biopruebas Ltda. Founded in 1981, Agdia provides diagnostic products and services to the international agricultural community. These tests are designed to detect plant pathogens (virus, viroid, bacteria, phytoplasma, oomycete and fungus), identify genetic traits (GMO), quantify plant hormones, and distinguish invasive ant species. We work in collaboration with the scientific community in the development and validation of our assays, all of which are produced under strict ISO quality standards.

Enclosed for your consideration are the following certifications:

- ISO 9001 Certificate
- ISO/IEC 17025 Certificate and Scope of Accreditation
- USDA APHIS PPQ Permit for International Diagnostic shipments

The Testing Services plant disease diagnostic laboratory at Agdia Incorporated performs a half million tests every year on behalf of growers, researchers, consultants, and government agencies worldwide. Agdia Testing Services is currently the only privately owned laboratory recognized by the USDA CPHST National Plant Pathogen Laboratory Accreditation Program (NPPLAP) for its work with *Plum pox virus*. Additionally, Agdia was the first company to be authorized by USDA Export Services to perform phytosanitary testing of *Solanum tuberosum* minitubers.

A complete listing of available tests and associated technologies can be found here: https://www.agdia.com/testing-services/by-test. All tests are performed under the quality systems requirements of ISO/IEC 17025 (see below).

Serological	**Molecular**
Enzyme linked immunosorbent assay (ELISA)	Conventional PCR and RT-PCR
Lateral Flow Assay (i.e., ImmunoStrip®)	Real-time PCR and qRT-PCR
Immunoblot	Nucleic acid hybridization
	Isothermal amplification (i.e., AmplifyRP®)

Please let us know if you have any questions about the information presented above. Additional documentation may be supplied on request.

Sincerely,

Baziel W. Vrient
