ALCALDÍA MAYOR DE BOGOTÁ D.C.
BOGOTÁ

ACTA DE REUNIÓN
No: _____

GD-F-08
Versión 5

CONVOCA: Gestión Documental	DD	MM	AA
	08	04	2022
LUGAR: Teatro Taller Filarmónico	HORA		
	9:00 am		

OBJETIVO: Verificar el espacio de almacenamiento de la colección de las agrupaciones juveniles, pre juveniles y orquesta.

ASISTENTES

NOMBRE	CARGO	ÁREA	FIRMA
MARÍA ISABEL GUTIERREZ	CONTRATISTA	DIRECCIÓN DE FOMENTO Y DESARROLLO	
AURA MURCIA	CONTRATISTA	FUNDACIÓN SANTO DOMINGO	
DIEGO PEREIRA	PROFESIONAL UNIVERSITARIO 219-02	DIRECCIÓN SINFONICA-BIBLIOTECA	
DIANA COLLAZOS	CONTRATISTA	DIRECCIÓN SINFONICA-BIBLIOTECA	
ALEJANDRA PADILLA G	CONTRATISTA	GESTIÓN DOCUMENTAL Y CORRESPONDENCIA	

ORDEN DEL DÍA

Revisar el espacio para definir las acciones a implementar con el fin de mejorar las condiciones de almacenamiento de la colección.

AMPLIACIÓN DE TEMAS

Se mencionaron las condiciones generales del espacio y los riesgos asociados a este lugar de almacenamiento como:

- Alta humedad relativa
- Entrada y salida constante, sin supervisión permanente, de personas no vinculadas al proceso de manipulación y préstamo de la colección.
- Alto nivel de material particulado (el espacio se encuentra sobre una calle transitada y la puerta de acceso se encuentra abierta de manera habitual).
- Fácil acceso de plagas.
- Acumulación de material.

Se mencionó que actualmente el espacio cuenta con un equipo deshumidificador y un datalogger, como elementos de seguimiento y control de condiciones ambientales.

A primera vista se determinó que la estantería se encontraba completamente ocupada y que ya no había estantes disponibles para la ubicación de partituras. Luego se revisaron las estanterías, con el fin de ver la forma en la cual estaban ordenadas las partituras, e identificar el material dispuesto en ellas. Tras la revisión, se encontró material no perteneciente a ninguna de las colecciones que se encuentran allí, el cual fue retirado y se dio de baja el contenido que no se utiliza junto con los folders dañados, con el fin de liberar espacio de la estantería.

Posteriormente se propuso reordenar la colección con el fin de aprovechar mejor el espacio y poder ejercer un mayor control de ella. Para esto, se realizará una jornada de reorganización, en la cual se ubicaran cada una de las colecciones en espacios particulares.

Igualmente se resaltó la necesidad de más estantería, ya que teniendo en cuenta el ritmo de crecimiento de la colección, la estantería actual no es suficiente. Se propuso como mecanismo de contingencia la búsqueda de bandejas que puedan ser acopladas a la estantería actual aumentando su capacidad, para lo cual se hablara con el área de Gestión Administrativa y Almacén.

CONVOCA: GESTION DOCUMENTAL	DD	MM	AA
	21	04	2022
LUGAR: TEATRO TALLER FILARMONICO	HORA		
	11:50		

OBJETIVO: SOCIALIZAR LA METODOLOGIA RELACIONADA CON EL PROCESO DE REVISION DE LOS DESHUMIDIFICADORES Y EL DILIGENCIAMIENTO DE LA PLANILLA EN DONDE SE CONSIGNA LA INFORMACIÓN LEVANTADA.

ASISTENTES

NOMBRE	CARGO	ÁREA	FIRMA
MANUEL CORTES	CONTRATISTA	GESTION ADMINITRATIVA Y ALMACEN	
SEVERO TORRES	CONTRATISTA	MUNDO LIMPIEZA LTDA	
ALEJANDRA PADILLA	CONTRATISTA	GESTIÓN DOCUMENTAL Y CORRESPONDENCIA	

ORDEN DEL DÍA

La charla fue ordenada de la siguiente manera:

1. Recomendaciones para manipulación de equipos deshumidificadores.
2. Desarrollo de la actividad.
3. Programación del modelo de equipo que se encuentra en ese espacio.

AMPLIACIÓN DE TEMAS

Recomendaciones generales:

- Si el equipo se ha traslado y se ha movido fuertemente, cambiando su posición de vertical a horizontal, se deben esperar al menos dos horas para que sea encendido y puesto en funcionamiento.
- Si el equipo se ha traslado un espacio corto, y ha sufrido de una vibración leve, esperar al menos 30 minutos para encender y poner en funcionamiento.
- Los equipos deben instalarse sobre una superficie plana.
- Deben estar separados de otra superficie u objeto alrededor de ellos por al menos 25 cm.
- Debe ser instalado en un lugar donde no se ponga en riesgo su integridad (por ejemplo, pasar el cable eléctrico por entre rieles que puedan cortarlo), ni la de funcionarios que entren a las bodegas.
- Una vez instalado y encendido se debe evitar moverlo.

Desarrollo de la actividad:

- Antes de retirar el tanque, el equipo debe ser apagado y desconectado, y se debe esperar un par de minutos para que el agua que está en los conductos termine de caer. Para esto se recomienda que el proceso sea cíclico, realizando primero el apagado general de los equipos.
- Una vez apagados y descansados por unos minutos los equipos, retirar el tanque, y establecer la cantidad de agua almacenada.
- Si el equipo dice que está lleno, igualmente realizar la medición del agua en el tanque y especificar en la planilla que está lleno y la cantidad de agua.
- Una vez instalado nuevamente el tanque, programar el deshumidificador teniendo en cuenta los rangos de humedad relativa establecidos para cada espacio (los cuales serán proporcionados por el restaurador del área).

MIPG OPERA

- En la casilla de observaciones se deben anotar todas aquellas anomalías que se presenten, por ejemplo, tanque caliente al tacto, ruidos inusuales, si hay regamiento de agua, o si el equipo se encuentra apagado, al igual que cualquier movimiento.
- Si hay regamiento de agua, apagar completamente y revisar el filtro para comprobar si hay congelamiento, Si hay congelamiento, dejar apagado, hacer la anotación en observaciones y mantener seguimiento del equipo.
- La actividad se debe realizar una vez al día.
- Se debe seguir el cronograma de descanso de los equipos, el cual se enviará para que lo tengan en esta sede.

Luego se hicieron las recomendaciones particulares para el equipo Airplus:

- Se identificaron las partes del equipo. Pantalla principal, botones de programación y luces de alerta, ubicación del filtro y del tanque de agua, el cual en este caso se encuentra en la parte inferior trasera.
- Si el equipo se encuentra apagado, se debe verificar si se apagó porque el tanque se encuentra lleno, en este caso, la luz de alerta de tanque lleno estara encendida y no se podra obaservar la medicion de humedad relativa que realiza.
- Si el equipo se encuentra apagado y el tanque no está lleno, esto se puede deber a un corte eléctrico o a una falla en el cable o el tomacorriente, revisar y dejar las observaciones que sean necesarias.
- El tanque de este equipo no presenta ninguna marcación, por lo que es necesario pasar el contenido a un balde u otro embace que permita su medición.
- Al sacar el agua de este tanque, se puede regar fácilmente por lo que se recomendó que la medición se debía realizar fuera de las áreas de archivo para minimizar salpicaduras a las unidades de almacenamiento.

Se llevará a la sede copia del instructivo de deshumidificadores para que lo tengan a disposición.

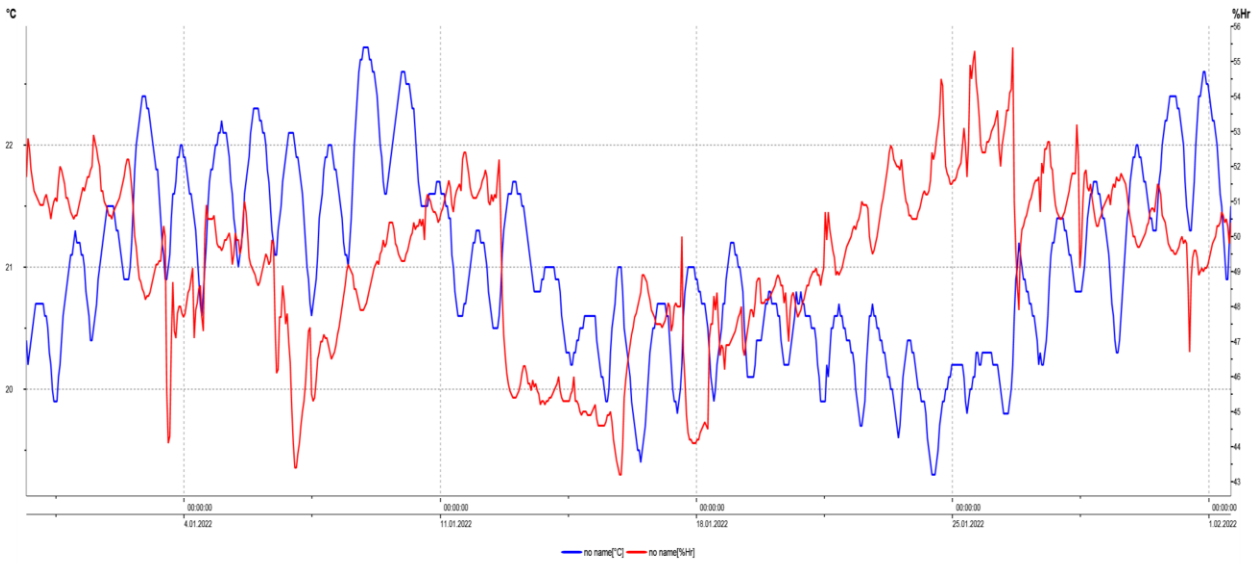
Banco de Partituras mediciones datalogger primer trimestre (enero, febrero, marzo) 2022

Como parte de los programas de conservación preventiva se realiza diariamente el monitoreo de condiciones ambientales del banco de partituras, con el fin de establecer los patrones de comportamiento de la humedad relativa y la temperatura de este espacio y como impactan sobre la colección, y proponer de ser necesario acciones de mejora que contribuyan a la protección del acervo documental de la entidad.

A continuación, se resume el comportamiento de dichas variables por mes.

Datalogger banco de partituras enero 2022				
Variable	Medición menor	Medición mayor	Promedio	Moda
Temperatura (C°)	19.3	22.8	21.003	21
Humedad relativa	43.2	55.4	49.294	50
Fecha inicio medición 30/12/2021 04:30:00 p.m		Fecha final medición 01/02/2022 02:30:00 p.m.		

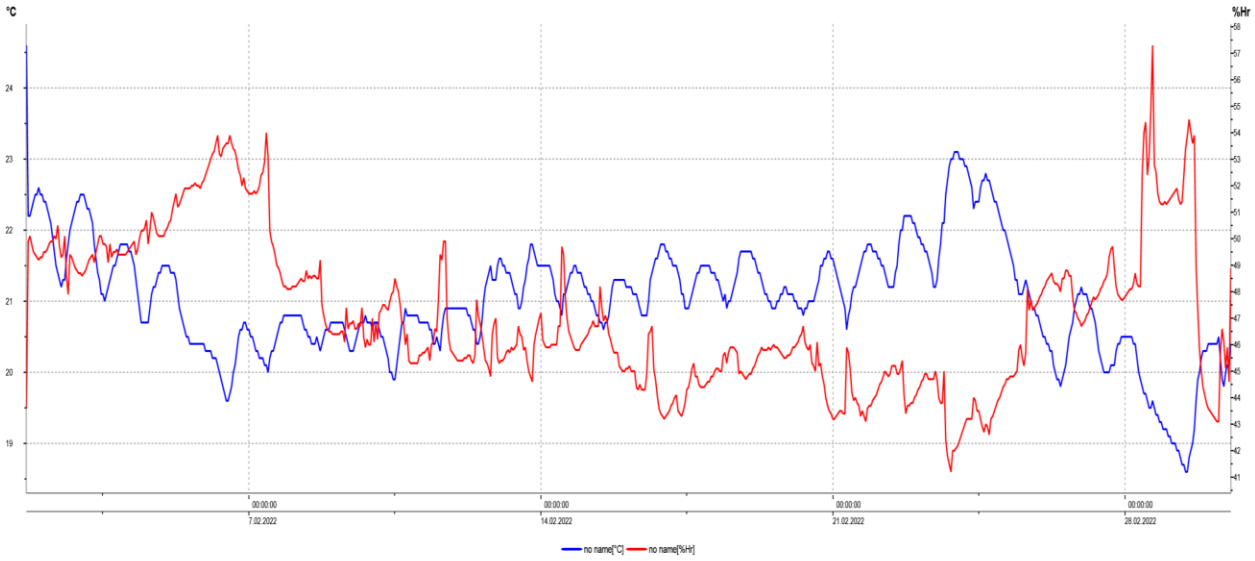
Tabla 1. Resumen datos datalogger mes de enero.



Grafica 1. Variaciones variables Hr% y T° mes de enero.

Datalogger banco de partituras febrero 2022				
Variable	Medición menor	Medición mayor	Promedio	Moda
Temperatura (C°)	18.6	24.6	21.029	21
Humedad relativa	41.2	57.3	47.123	45
Fecha inicio medición 01/02/2022 04:00:00 p.m		Fecha final medición 02/03/2022 01:00:00 p.m.		

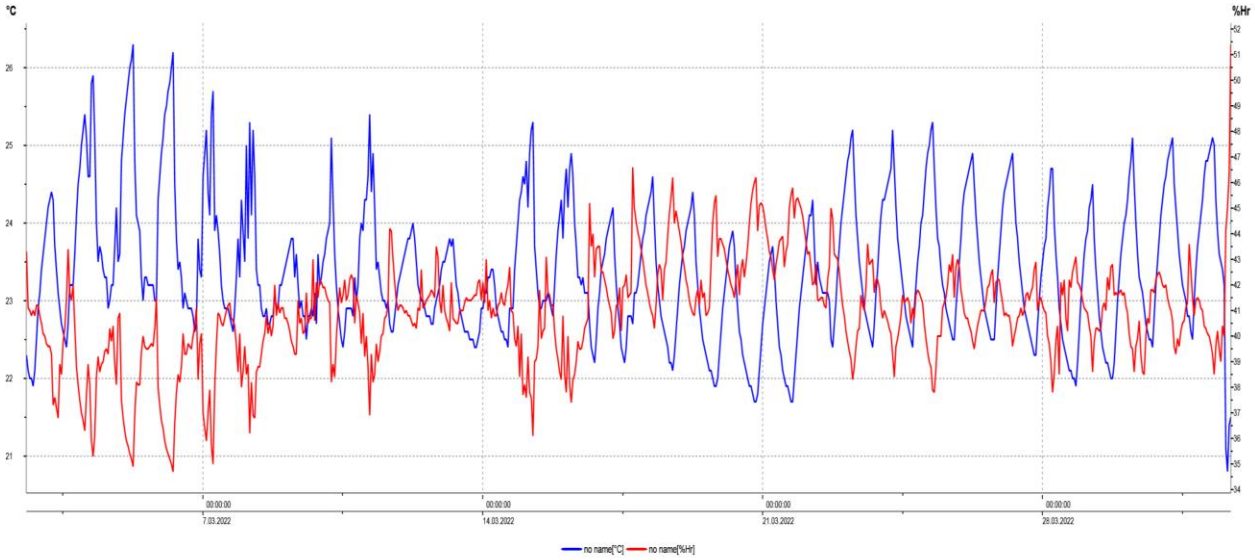
Tabla 2. Resumen datos datalogger mes de febrero.



Grafica 2. Variaciones variables Hr% y T° mes de febrero.

Datalogger banco de partituras marzo 2021				
Variable	Medición menor	Medición mayor	Promedio	Moda
Temperatura (C°)	20.8	26.3	23.414	23
Humedad relativa	34.7.	51.4	40.879	41
Fecha inicio medición 02/03/2022 02:00:00 p.m		Fecha final medición 01/04/2022 05:00:00 p.m.		

Tabla 3. Resumen datos datalogger mes de marzo.



Grafica 3. Variaciones variables Hr% y T° mes de marzo.

Observaciones:

Para el análisis de los datos recogidos se tendrá en cuenta lo consignado en el ACUERDO No. 049 del 5 de mayo de 2000, por el cual se desarrolla el artículo del Capítulo 7 “Conservación de Documentos” del Reglamento General de Archivos sobre “condiciones de edificios y locales destinados a archivos”, en donde se establecen los siguientes valores para la humedad relativa y temperatura:

Soporte	Temperatura	Humedad relativa
Papel	15° a 20° C con una fluctuación diaria de 4° C.	entre 45% y 60% con fluctuación diaria del 5%.
Fotografía Blanco y Negro:	15° a 20° C.	40% a 50%
Fotografía Color:	Menor a 10° C.	25% a 35%
Grabaciones:	10° a 18° C	40% a 50%
Medios magnéticos	14° a 10° C.	40% a 50%
Discos Ópticos:	16° a 20° C.	35% a 45%
Microfilm:.	17° a 20° C	30% a 40%

Tabla 4: Condiciones ambientales de humedad relativa y temperatura de edificios y locales destinados a archivos

Igualmente, se debe mencionar que el deposito del banco de partituras, tiene un área de 34. 10 metros cuadrados y un volumen de 71.17 metros cúbicos y solo cuenta con un datalogger, por lo que los datos, reflejan las condiciones puntuales de aproximadamente 9 metros cuadrados y 27 metros cúbicos. Se emplea el termino aproximadamente, porque el rango de medición del equipo, se verá influido por su ubicación en el espacio, y lo que le rodea.

Junto con lo anterior, también se debe mencionar que el 4 de febrero, se instaló un segundo deshumidificador, con el fin de mejorar el control de la humedad relativa del espacio. Es necesario mencionar que la selección de los puntos de ubicación de los equipos, se hace aprovechando los espacios disponibles en el banco de partituras, y en donde se afecta menos y hay menor riesgo para el tránsito de los funcionarios por el deposito, también se debe aclarar que el impacto que los equipos tienen sobre la humedad relativa del espacio es limitado, debido a la distribución espacial de las estanterías y la acumulación de material.

En enero, el datalogger se encontró ubicado en la parte sur del muro occidental, quedando frente y entre la estantería rodante, a partir del mes de febrero, se trasladó al extremo norte del depósito, ubicándolo sobre el muro occidental, junto a la ventada queda al cuarto de servidores, y en uno de los corredores de tránsito para el acceso a la estantería, este punto también se emplea para almacenar el insumo de papel que biblioteca emplea, por lo que no hay mucho flujo de aire.

Durante el primer mes de mediciones, se observa que las fluctuaciones de temperatura se mantuvieron dentro de los rangos adecuados, mientras que la humedad relativa, presentaron picos mucho mayores, aunque, se debe aclarar que estos cambios de manera paulatina, sin exceder lo +/- 4 grados. Es necesario tener en cuenta que durante este mes se presentaron lluvias, lo que contribuyó al aumento de la humedad relativa.

A partir del mes de febrero, y debido al cambio de ubicación del datalogger, se pudo monitorear el comportamiento de otra zona del depósito, en donde se evidencia una mayor temperatura y una menor humedad relativa, lo cual seguramente se encuentra relacionado a su cercanía con el cuarto de servidores y la puerta de acceso, que generalmente permanece abierta, y permite el flujo de aire.

Debido a las lecturas del catalogar y la humedad recolectada por el equipo deshumidificador[1] en el punto 1 (el más cercano a la puerta de acceso al depósito y al datalogger), se concluye que el control de humedad en esa zona, no es necesario, igualmente, esto se puede deber a que, en los meses de febrero y marzo, las lluvias disminuyeron.

Se puede decir que el deposito cuenta con dos zonas con condiciones ambientales diferentes, y que esto debe ser tenido en cuenta durante los traslados internos del material.

[1] Se anexan las planillas de deshumidificadores de estos meses.

Teniendo en cuenta los rangos recomendados de estas condiciones ambientales, que se presentan en la tabla número 4 de este documento, se puede decir que en términos generales el banco de partituras se encuentra entre los rangos aceptables, lo que no garantiza la adecuada conservación de los documentos, ya que se observan fluctuaciones de las variables que exceden los rangos recomendados, siendo la humedad relativa la variable que debe ser atendida con mayor urgencia , ya que sus fluctuaciones llegan a ser de un 20%.

De igual manera, aunque la temperatura no mostro fluctuaciones tan amplias como la humedad relativa, y tanto su moda, como los promedios de cada mes se encontraron dentro de los rangos recomendados, durante todos los meses, si se presentaron temperaturas que excedían por uno o dos grados la mayor temperatura permitida para los espacios de almacenamiento de papel.

Teniendo en cuentas las condiciones de almacenamiento de este depósito, se puede concluir que estas están influyendo en las mediciones ambientales, ya que, al haber material documental ubicado en corredores, en la parte superior de la estantería y cajas apiladas en esquinas y en las zonas del depósito que lo permitan, se está limitando el flujo de aire que contribuiría a una mayor ventilación y por ende a la disminución en los rangos de humedad relativa y temperatura. Se debe aclara que las condiciones de almacenamiento del depósito, son el resultado de la falta de espacio para el almacenamiento adecuado de material documental y bibliográfico que se presenta en la entidad.

Elaboro: Alejandra Padilla Gutierrez/Contratista Restauradora del área de Gestión Documental y Correspondencia

vie, 22 abr, 8:33

Buenos dias, quisiera cotizar mantenimiento correctivo y/o preventivo a 10 equipos deshumidificadores.

Adjunto envío información de los mismos.

Código equipo en entidad	Referencia	Descripción estado
6124	Bionaire BD 20	Se encuentra en buen funcionamiento. Se le realizó mantenimiento preventivo.
6125	Bionaire BD 20	Se encuentra en buen funcionamiento. Se le realizó mantenimiento preventivo.
6126	Bionaire BD 20	Se realizó mantenimiento preventivo y limpieza de desagüe.
6127	Bionaire BD 20	No está recogiendo humedad, al sacar el tanque de agua se siente caliente, al igual que la parte inferior del equipo. Se le realizo cambio de sensor de humedad
6128	Bionaire BD 20	Se encuentra en buen funcionamiento. Se le realizó mantenimiento preventivo.
6129	Bionaire BD 20	El equipo no está recogiendo humedad del ambiente, al prenderlo suena rarísimo y durante toda su actividad suena muy fuerte, se recalienta, lo que se hace evidente al tocar la parte inferior del deshumidificador y el tanque, y se está presentando congelación. Se realizó cambio de tarjeta de distribución.
6132	Bionaire BD 20	No está funcionando, no recoge humedad. Al equipo se le realizó la reparación de la tarjeta principal
6133	Bionaire BD 20	Se realizó mantenimiento preventivo y limpieza de desagüe.
7952	Frigidaire FFAD5033W1	Se realizó mantenimiento preventivo.

Quedo pendiente de su respuesta, y muchas gracias por su ayuda.
