STORAGE AND TRANSPORT SOLUTIONS

Carts and shelving for clinical applications

HermanMiller for Healthcare

SELECTION CREATES VALUE THAT ENSURES PERFORMANCE

Nearly 30 years of designing and developing storage and transport solutions for clinical settings keeps us focused on selection, value, and performance.

Selection — Our commitment is to address specific clinical applications. Since our development of Co/Struc, the original clinical modular-based storage system, we have been providing the broadest array of carts, shelving, and accessories in the marketplace.

Value — Our products stand up to rigorous daily use and carry multi-year warranties that are the best in the market, clear evidence of the confidence we place in our products' durability.

Performance — Our broad product offering works together as a total system to improve productivity. By keeping accessories handy, organizing materials and equipment conveniently, and changing configurations easily as needs dictate, our storage and transport products support how people really work.

Selection, value, and performance are evident in our five major product categories:

Procedure/Supply — Interchangeable components and numerous accessories that meet specific needs and reconfigure quickly to address new requirements

Co/Struc — A modular-based storage system that reduces labor costs through an integrated approach to storage and transport with application from bedside to clean utility

Technology — Carts and cabinets that provide stable, secure, mobile ways to support the advanced equipment required for video-based procedures

Case — Stainless steel case carts with extensive features and, in addition to standard sizes and configurations, available in nearly any custom size and setup for special applications

Wire Carts/Shelving — A diverse, cost-effective offering that includes everything from simple utility carts to specialty designs, as well as wire and plastic shelving and a movable aisle system

PROCEDURE/SUPPLY CARTS

We configure our plastic procedure/supply carts to meet specific needs, yet you can quickly change them to handle new requirements. This flexibility extends the useful life of every cart. A wide selection of cart sizes and an extensive assortment of interchangeable components, including durable plastic drawers that can be used in other Herman Miller storage and transport products, make this flexibility a reality.

CO/STRUC

The Co/Struc system delivers flexibility and capacity when it comes to organizing and storing supplies. Its drawers are interchangeable with other Herman Miller transport and storage products, so staff pack them once and don't handle them again until point of use. Lockers operate as high-density stationary or mobile storage units that relocate easily. The L Cart provides general-purpose transport in a space-saving footprint.

TECHNOLOGY PRODUCTS

Our technology products provide stable, secure ways to support advanced equipment. Specially designed units protect sensitive, costly scopes and feature self-storing tambour doors and interiors that adjust to various-sized scopes. Carts with heavy-duty casters and strong bases offer stability and ease of movement. Their side-mounted, interchangeable accessories keep materials handy, while adjustable shelves locate equipment where it is most convenient.

CASE CARTS

Our stainless steel case carts are an important part of an overall, laborsaving delivery system. They feature durable, easy-to-clean drawers that interchange with our other storage and transport products so that supplies can be packed once and not handled again until point of use. Drawers and shelves can be located anywhere inside carts and easily relocated when necessary.

WIRE CARTS AND SHELVING

Our wire products contribute to an efficient overall materials management system. The line features shelving and carts in a variety of sizes, from simple utility to sophisticated supply delivery, from suture to security. Units accept a range of accessories, including tote boxes and dividers. A high-density storage system with an overhead track makes the most productive use of available floor space.

CREATING FLEXIBLE HEALTHCARE ENVIRONMENTS FOR OVER 30 YEARS.
