- _____: To help nature with new ecologic ideas for a long time.
- _____: Animals and plants that grow in natural conditions.
- _____: A structure with walls and a roof, like apartments or companies.

Eco-cities

Some friends of nature are creating Eco-cities, cities that are created to be eco - friendly. For example, there is easy access to public transportation, so people don't need to use cars to visit the places of the city, and the community is connected by many bicycle and pedestrian walking paths.

In addition, eco-cities use sustainable energy by using solar and wind power to protect the polar bears. Eco-cities also have green space, including parks and forests that give a natural habitat for wildlife, and community gardens where residents can plant and grow fruits and vegetables.

Also, the buildings in an eco-city are constructed using ecological materials, such as recycled bricks made of plastic bottles and wood. Creating all the eco-cities, people think we should start helping our planet.
