This process may include several stages, such as

Software development has several key characteristics that are essential for creating effective and high-quality applications such as the following

- Iterative and Incremental
- Collaborative
- Requirements
- Testable
- Evolutionary
- Scalable
- Documentado

Software development is the process of designing, creating, testing, and maintaining computer programs or applications In addition, the software can follow various approaches and methodologies, such as agile development, the waterfall model, or development based on prototypes, among others. Each methodology has its own practices and processes to manage the project and ensure the quality of the software.
