PRESUPUESTO OFICINA LOCAL MAGANGUÉ

ITEM	DESCRIPCION	UND.	CANT	V/UNIT.	SUBTOTAL
1.00	**PRELIMINARES**				**$ 25,969,267.00**
1,1	LOCALIZACIÓN Y REPLANTEO	M2	815.90	$ 3,301.00	$ 2,693,285.90
1,2	DESMONTE DE VENTANAS	M2	4.880	$ 11,772.00	$ 57,447.36
1,3	DEMOLICIÓN MANUAL DE MESÓN EN CONCRETO	M2	1.80	$ 21,021.00	$ 37,837.80
1,4	DESMONTE DE APARATO SANITARIO	UND	5.00	$ 28,488.00	$ 142,440.00
1,5	DESMONTE DE LAVAMANOS	UND	4.00	$ 17,296.00	$ 69,184.00
1,6	DESMONTE DE DIVISIÓN PARA BAÑO EN ACRILICO	M2	2.52	$ 4,763.00	$ 12,002.76
1,7	DEMOLICIÓN MANUAL DE ENCHAPE O PAÑETE (REVOQUE)	M2	49.12	$ 10,425.00	$ 512,076.00
1,8	DESMONTE DE MARCOS Y PUERTAS	UND	13.00	$ 13,585.00	$ 176,605.00
1,9	DESMONTE DE POCETA EN ACERO INOXIDABLE	UND	1.00	$ 17,296.00	$ 17,296.00
1,10	DESMONTE Y REINSTALACIÓN DE ARCHIVADORES, CONSISTE EN LA REUBICACIÓN DE LOS ARCHIVADORES EN EL ÁREA DOCUMENTAL, ESTO CON EL FIN DE REDISTRIBUIR EL ESPCIO ACORDE CON EL ACUERDO 049 DE 2000 REPOSITORÍO NORMATIVO ARCHIVO GERENERAL DE LA NACIÓN.INCLUYE RESANE DE PISOS.	M2	40.00	$ 1,509.00	$ 60,360.00
1,11	INSTALACIÓN DE CERRAMIENTO PROVISIONAL EN TELA VERDE POLIETILENO DE ALTA DENSIDAD Y RESISTENCIA 65 GR/M2 CON UNA ALTURA DE 2,10 M, ESTACONES DE MADERA COMÚN PARA FIJACIÓN VERTICAL DE ALTURA DE 2,50 M PUESTO MÍNIMO CADA 2,0 M, ELEMENTOS DE FIJACIÓN, INCLUYE: SUMINISTRO, TRANSPORTE, INSTALACIÓN, EXCAVACIÓN, CONCRETO DE FUNDACIÓN PREPARADO EN OBRA DE 17 MPA - 2500 PSI, DIÁMETRO APROXIMADO 0,20 M Y PROFUNDIDAD APROXIMADA 0,30 M, CABLE O ALAMBRE TENSOR PARTE INFERIOR Y SUPERIOR HORIZONTAL, MANTENIMIENTO, DESMONTE Y TODOS LOS DEMÁS ELEMENTOS NECESARIOS PARA SU CORRECTA INSTALACIÓN Y OPERACIÓN.	M	190.00	$ 22,096.00	$ 4,198,240.00
1,12	DESMONTE DE CANAL EN LÁMINA Ó PVC	M	28.38	$ 4,612.00	$ 130,888.56
1,13	DESMONTE DE CIELO RASO	M2	350.00	$ 7,935.00	$ 2,777,250.00
1,14	DESMONTE DE CORTINAS, PERSIANAS Y CORTINEROS.	M2	34.13	$ 10,564.00	$ 360,549.32
1,15	DESMONTE DE AIRE ACONDICIONADO	UND	3.00	$ 137,407.00	$ 412,221.00
1,16	DESMONTE DE CERRAMIENTO EN ALAMBRE DE PUAS CON POSTES DE MADERA	M	90.00	$ 6,645.00	$ 598,050.00
1,17	RETIRO Y BOTADA DE ESCOMBROS. INCLUYE CARGUE, TRANSPORTE Y BOTADA DE MATERIAL.	M3	100.00	$ 39,157.00	$ 3,915,700.00
1,18	ROCERÍA Y LIMPIEZA MANUAL Y/O CON EQUIPO, CONTROL DE MALEZA Y CRECIMIENTO DE MATERIAL VEGETAL (INCLUYE RETIRO Y DISPOSICIÓN FINAL)	M2	1,201.18	$ 2,185.00	$ 2,624,578.30
1,19	DESMONTE DE TEJA DE ASBESTO CEMENTO EXISTENTE. LA MANO DE OBRA INCLUYE LOS ELEMENTOS REQUERIDOS DE PROTECCIÓN PARA EL MANEJO DE ESTA TEJA. INCLUYE MANEJO ESPECIAL, CARGUE, TRANSPORTE Y BOTADA ESPECIAL AL SITIO	M2	381.00	$ 7,046.00	$ 2,684,526.00
1,20	DESMONTE DE ESTRUCTURA DE CUBIERTA EXISTENTE. INCLUYE MANO DE OBRA DE DESINSTALACIÓN, CARGUE, TRANSPORTE Y BOTADA CON DERECHO A BOTADERO	M2	381.00	$ 6,974.00	$ 2,657,094.00
1,21	DESMONTE DE ESCRITORIOS Y SILLAS.INCLUYE MOVERLOS O TRASLADARLOS A SITIO DE ACOPIO DEBIDAMENTE ENVUELTOS EN PLÁSTICO	UND	10.00	$ 19,182.00	$ 191,820.00
1,22	PODA DE RAMAS	UND	30.00	$ 49,706.00	$ 1,491,180.00
1,23	DEMOLICIÓN PISOS, ANDENES, CUNETAS Y BORDILLOS DE CONCRETO, EN CUALQUIER ESPESOR. INCLUYE: RETIRO DE MALLA DE REFUERZO SI EXISTE, COMPRESOR NEUMÁTICO CON MARTILLO, ADEMÁS RECUPERACIÓN DE LO MATERIALES APROVECHABLES, CARGUE, TRANSPORTE HASTA EL SITIO DE ACOPIO INDICADO POR LA INTERVENTORÍA Y BOTADA DE ESCOMBROS	M3	5.00	$ 29,727.00	$ 148,635.00
2.00	MOVIMIENTO DE TIERRAS				**$ 6,464,687.73**
2,1	EXCAVACIÓN MANUAL H= 0-2 M. INCLUYE CARGUE Y RETIRO.	M3	87.75	$ 51,093.00	$ 4,483,410.75
2,2	LLENO COMPACTADO CON RECEBO COMÚN	M3	16.54	$ 119,787.00	$ 1,981,276.98
3.00	CERRAMIENTO				**$ 117,709,707.00**
3,1	MANTENIMIENTO CERRAMIENTO EXISTENTE EN PINTURA ANTICORROSIVA Y ACABADO EN ESMALTE PARA EXTERIORES.	M	90.00	$ 17,363.00	$ 1,562,670.00
3,2	CERRAMIENTO EN TUBO REDONDO GALVANIZADO DE 2". INCLUYE PATA DE ANCLAJE Y TAPON METALICO PINTADO CON PINTURA ANTICORROSIVA Y ACABADO EN ESMALTE PARA EXTERIORES.	M	90.00	$ 718,220.00	$ 64,639,800.00
3,3	ACERO PARA REFUERZO	KG	3,492.00	$ 6,491.00	$ 22,666,572.00
3,4	CONCRETO DE 3000 PSI	M3	30.00	$ 718,355.00	$ 21,550,650.00
3,5	SOLADO EN CONCRETO CICLOPEO	M3	15.00	$ 486,001.00	$ 7,290,015.00
4.00	INSTALACIONES HIDRÁULICAS Y SANITARIAS				**$ 3,519,255.00**
4,1	TUBERÍA CPVC PRESIÓN Ø= 1/2" (INCL. ACCESORIOS)	M	60.00	$ 14,159.00	$ 849,540.00
4,2	TUBERÍA PVC PRESIÓN Ø= 2" (INCL. ACCESORIOS)	M	20.00	$ 21,220.00	$ 424,400.00
4,3	TUBERÍA PVC SANITARIA Ø= 3" (INCL. ACCESORIOS)	M	20.00	$ 32,453.00	$ 649,060.00
4,4	PUNTO HIDRÁULICO CPVC DE 1/2" (3 M)	UND	2.00	$ 65,661.00	$ 131,322.00
4,5	VALVULA DE REGISTRO DE 1/2" INCLUYE TAPA DE REGISTRO	UND	2.00	$ 39,461.00	$ 78,922.00
4,6	TUBERÍA DRENAJE MINI SPLIT PVC 1" (INCL. ACCESORIOS)	M	25.00	$ 20,204.00	$ 505,100.00
4,7	REJILLA PARA PISO EN PVC 3"X2"	UND	2.00	$ 9,168.00	$ 18,336.00

4,8	TUBERÍA PVC Ø= 4" (INCL. ACCESORIOS)	M	15.00	$ 36,573.00	$ 548,595.00
4,9	SUMINISTRO E INSTALACION DE TUBERÍA PVC-S SANITARIA Ø= 2" (INCLUYE ACCESORIOS)	M	15.00	$ 20,932.00	$ 313,980.00
5.00	CUBIERTA				**$ 161,893,544.00**
5,1	SUMINISTRO, TRANSPORTE E INSTALACIÓN DE CUBIERTA (TEJA TERMOACÚSTICA KINGROOF ECO - PANEL TIPO SANDWICH CON AISLANTE EN POLISOCIANURATO PIR SAFE E:30MM BLANCO O VERDE, CALIBRE 28, LÁMINA INTERNA FOIL VINIL COLOR NATURAL). INCLUYE LOS CABALLETES Y REMATES REQUERIDOS, ADEMÁS DE LOS ACCESORIOS PARA SU DEBIDA INSTALACIÓN, Y RECUBRIMIENTO DE COLOR.	M2	390.00	$ 136,791.00	$ 53,348,490.00
5,2	CONSTRUCCIÓN Y MONTAJE DE ESTRUCTURA METÁLICA CON PERFILERIA TIPO PERFILERIA TIPO IPE, HEA, PHR-C, PTE PARA ELEMENTOS DE CUBIERTA, FACHADA, RAMPAS O ÁREAS DE CIRCULACIÓN METÁLICAS, SEGÚN DISEÑO. INCLUYE: SUMINISTRO Y TRANSPORTE DE LÁMINAS, PLATINAS, UNIONES, SOLDADURAS DE ACABADO O PRESENTACIÓN, ANCLAJES Y PERNOS A ESTRUCTURA DE CONCRETO Y MADERA. INCLUYE ENSAYOS A SOLDADURAS, OBRA FALSA Y TODO EL EQUIPO Y LA HERRAMIENTA NECESARIA PARA EL MONTAJE.	KG	7262.30	$ 11,950.00	$ 86,784,485.00
5,3	CANAL EN LÁMINA GALVANIZADA CAL. 20 S= 50 CM	M	30.00	$ 102,625.00	$ 3,078,750.00
5,4	CIELO RASO CONTINUO EN PVC BLANCO RESISTENTE A LA HUMEDAD, INCLUYE ESTRUCTURA METÁLICA DE ACERO GALVANIZADO, TORNILLOS Y ANCLAJES NECESARIOS PARA SU CORRECTO FUNCIONAMIENTO, LA TOTALIDAD DE LOS ACCESORIOS NECESARIOS PARA SU CORRECTA INSTALACIÓN, Y LAS PERFORACIONES Y RESANE	M2	299.00	$ 62,481.00	$ 18,681,819.00
6.00	ENHAPES Y ACCESORIOS				**$ 3,848,936.50**
6,1	SUMINISTRO E INSTALACION DE ENCHAPE EN CERÁMICA 30X60 CM	M2	27.90	$ 76,719.00	$ 2,140,460.10
6,2	SUMINISTRO E INSTALACION DE PISO EN PORCELANATO 60X60	M2	12.60	$ 105,794.00	$ 1,333,004.40
6,3	SUMINISTRO E INSTALACION DE GUARDAESCOBA EN PORCELANATO	ML	15.50	$ 24,224.00	$ 375,472.00
7.00	BAÑOS				**$ 10,414,255.00**
7,1	SANITARIO SMART ELONGADO COLOR BLANCO	UND	4.00	$ 573,420.00	$ 2,293,680.00

10.4	SUMINISTRO E INSTALACIÓN DE LUMINARIA DE EMERGENCIA CERTIFICADA RETIE PARA CUARTOS TECNICOS. INCLUYE 1 METRO DE CABLE ENCAUCHETADO 3X18 HF FR LS Y CLAVIJA.	UND	7.00	$ 110,307.00	$ 772,149.00
10,5	SUMINISTRO E INSTALACIÓN SALIDA DE ILUMINACION EN TUBERIA EMT 3/4", CON CAJA RAWELT 5800, TOMA CORRIENTE, INCLUYE CURVAS, Y ACCESORIOS PARA FIJACION.	UND	46.00	$ 202,006.00	$ 9,292,276.00
10,6	SUMINISTRO E INSTALACIÓN SALIDA DE INTERRUPTOR TRIPLE EN TUBERIA EMT 3/4", CON CAJA RAWELT 2400, INTERRUPTOR, INCLUYE CURVAS, Y ACCESORIOS PARA FIJACION. AUDITORIO	UND	1.00	$ 198,800.00	$ 198,800.00
10,7	SUMINISTRO E INSTALACIÓN SALIDA DE TOMACORRIENTE DOBLE CON POLO A TIERRA EN MURO SOBREPUESTA EN TUBERIA EMT 3/4", CON CAJA RAWELT 5800, TOMA CORRIENTE, INCLUYE CURVAS, Y ACCESORIOS PARA FIJACIÓN.	UND	8.00	$ 193,168.00	$ 1,545,344.00
10,8	SUMINISTRO E INSTALACIÓN SALIDA DE TOMACORRIENTE DOBLE BLANCA CON POLO A TIERRA EN CANALETA METALICA SOBREPUESTA , TOMA CORRIENTE CABLE 12 AWG TRIPLE FASE AZUL Y ACCESORIOS PARA FIJACIÓN Y FUNCIONAMIENTO	UND	22.00	$ 109,342.00	$ 2,405,524.00
10,9	SUMINISTRO E INSTALACIÓN DE TABLERO TRIIFASICO DE 18 CIRCUITOS PARA RED REGULADA SIN ESPACIO TOTALIZADOR, INCLUYE PROTECCIONES 12 DE 1X20A.	UND	1.00	$ 962,099.00	$ 962,099.00
10,10	SUMINISTRO E INSTALACIÓN SALIDA DE TOMACORRIENTE DOBLE CON POLO A TIERRA REGULADA EN CANALETA METALICA SOBREPUESTA , TOMA CORRIENTE Y ACCESORIOS PARA FIJACIÓN Y FUNCIONAMIENTO	UND	22.00	$ 122,784.00	$ 2,701,248.00

10,11	SUMINISTRO DE MANO DE OBRA PARA EL ACONDICIONAMIENTO CONEXIÓN DEL MEDIDOR DE ENERGÍA, MARCACION DE FASES, ADECUACIONES.	UND	1.00	$ 455,523.00	$ 455,523.00
10,12	SUMINISTRO E INSTALACIÓN SALIDA DE INTERRUPTOR SENCILLO EN TUBERIA EMT 3/4", CON CAJA RAWELT 2400, INTERRUPTOR, INCLUYE CURVAS, Y ACCESORIOS PARA FIJACION.	UND	9.00	$ 142,930.00	$ 1,286,370.00
10,13	SUMINISTRO E INSTALACIÓN DE TRANSFORMADOR DE 30 KVA REGULADOR 208/120V	UND	1.00	$ 20,133,203.00	$ 20,133,203.00
10,14	SUMINISTRO E INSTALACIÓN DE LUMINARIA LED 60X60 40W 120V AUDITORIO	UND	12.00	$ 164,533.00	$ 1,974,396.00
10,15	SUMINISTRO E INSTALACIÓN DE UN SISTEMA DE PUESTA A TIERRA CON TRES VARILLAS COBRE-COBRE DE 2,4M X 5/8", SOLDADURA EXOTERMICA Y CABLE 1/0 COBRE DESNUDO 25ML PARA EL TRANSFORMADOR.	UND	1.00	$ 5,692,799.00	$ 5,692,799.00
10,16	SUMINISTRO E INSTALACIÓN DE LUMINARIA PANEL LED REDODO DE 18W 120V. PARA COCINA, BAÑOS CUARTO DE ASEO, PASILLOS.	UND	20.00	$ 34,017.00	$ 680,340.00
10,17	SUMINISTRO E INSTALACIÓN DE PLANTA ELECTRICA DE 30 KVA, ENCABINADA, EN CUARTO SEPARADO, CON TRASNFERENCIA Y TANQUE DE RESERVA.	UND	1.00	$ 51,995,849.00	$ 51,995,849.00
10,18	SUMINISTRO E INSTALACIÓN DE ACOMETIDA TRIFASICA A TRANSFERENCIA DESDE PLANTA Y TRASNFORMADOR 3X1/0+1/0+1/0T, INCLUYE ELEMENTOS DE SUJECIÓN	M	45.00	$ 228,907.00	$ 10,300,815.00
10,19	DESMONTE DE REDES ELECTRICAS EXISTENTES. INCLUYE EL RETIRO DE TODAS LAS LUMIANRIAS	GL	1.00	$ 1,836,603.00	$ 1,836,603.00
10,20	SUMINISTRO E INSTALACIÓN DE CABLE TRENSADO 3X12 FASE ROJA O FASE AZUL PARA TOMACORRIENTES DESDE EL TABLERO HASTA LA PRIMERA TOMA DEL CIRCUITO	M	120.00	$ 20,438.00	$ 2,452,560.00
10,21	SUMINISTRO E INSTALACIÓN SALIDA PARA AA EN TUBERIA EMT 1", CABLE 2X10+12T AWG LIBRE DE HALOGENOS, CON CAJA RAWELT 5800, TOMA CORRIENTE, INCLUYE CURVAS, Y ACCESORIOS PARA FIJACION.	UND	11.00	$ 308,877.00	$ 3,397,647.00
10,22	SUMINISTRO E INSTALACIÓN DE CANALETA METALICA DE 12X5CM HOMOLOGADA BLANCA PINTURA ELECTROSTÁTICA, INCLUYE TROQUELES TRIPLES, ALAMBRE DE PUESTA A TIERRA Y MARCACION RETIE.	M	90.00	$ 84,332.00	$ 7,589,880.00
10,23	SUMINISTRO E INSTALACIÓN DE TABLERO TRIFASICO DE 30 CIRDUITOS CON ESPACIO PARA TOTALIZADOR INCLUYE TOTALIZADOR DE 100A A 200A, PROTECCIONES SEGUN DIAGRAMA UNIFILAR, CONEXIÓN DE ACOMETIDA DESDE TRANSFORMADOR .	UND	1.00	$ 1,462,522.00	$ 1,462,522.00
10,24	SUMINISTRO E INSTALACION DE SENSOR ODC0S-I1W INFRARROJO MONTAJE EN TECHO.	UND	5.00	$ 203,360.00	$ 1,016,800.00
10,25	SUMINISTRO E INSTALACIÓN SALIDA PARA SENSOR INFRARROJO EN TECHO, INCLUYE CABLE, CONECTORES Y ELEMENTOS DE FIJACIÓN.	UND	5.00	$ 135,615.00	$ 678,075.00
10,26	SUMINISTRO E INSTALACIÓN DE SALIDA DE TOMACORRIENTE DOBLE CON POLO A TIERRA GFCI, INCLUYE CANA 2400 ALUMINIO FUNDIDO, CONCTORES Y SOPORTES DE TUBERIA Y EN SI TODO LO NECESARIO PARA SU FUNCIONAMIENTO.	UND	2.00	$ 259,377.00	$ 518,754.00
10,27	SUMINISTRO E INSTALACION DE CANALIZACION 2X3" TUBO PVC 3", INCLUYE EXCAVACIÓN Y RELLENO CON EL MISMO MATERIAL EXCAVADO	M	50.00	$ 85,251.00	$ 4,262,550.00
10,28	SUMINISTRO E INSTALACION DE ACOMETIDA DESDE TN1 HASTA UPS Y TR1 2X6+6+8T, INCLUYE TERMINALES	M	15.00	$ 72,843.00	$ 1,092,645.00
10,29	SUMINISTRO E INSTALACIÓN DE CAJA CS274 DE 0,6X0,6M CON TAPA CON MARCO Y CONTRAMARCO EN LADRILLO RECOCIDO, INCLUYE EXCAVACIÓN	UND	3.00	$ 529,561.00	$ 1,588,683.00
10,30	SUMINISTRO E INSTALACIÓN DE TUBO EMT DE 3" PARA ACOMETIDA DE PLANTA A TRANSFERENCIA	M	20.00	$ 171,819.00	$ 3,436,380.00
10,31	SUMINISTRO E INSTALACION DE CANALIZACION 1X3" TUBO PVC 3", INCLUYE EXCAVACIÓN Y RELLENO CON EL MISMO MATERIAL EXCAVADO	M	5.00	$ 60,085.00	$ 300,425.00
10,32	SUMINISTRO E INSTALACIÓN DE REFLECTOR LED CON PANEL SOLAR DE 200W	UND	6.00	$ 404,167.00	$ 2,425,002.00
11.00	CARPINTERÍA METÁLICA				**$ 20,334,821.90**
11,1	MARCO METÁLICO LÁMINA CAL. 20 A=0.80 M (INCL. PINTURA)	UND	11.00	$ 191,184.00	$ 2,103,024.00
11,2	VENTANA EN ALUMINIO CORREDIZA (VIDRIO 4 MM)	M2	26.00	$ 342,220.00	$ 8,897,720.00
11,3	DIVISIÓN PARA BAÑO EN LÁMINA CAL. 20 (INCL. PINTURA)	M2	13.30	$ 392,003.00	$ 5,213,639.90
11,4	MANTENIMIENTO DE VENTANAS Y REJAS METÁLICAS EXISTENTES DE DIMENSIONES VARIABLES, INCLUYE DESMONTE Y REINSTALACIÓN, ADEMÁS DE PINTURA ANTICORROSIVA	UND	10.00	$ 59,985.00	$ 599,850.00
11,5	PUERTA DE DOS SECCIONES EN VIDRIO TEMPADO CON MARCO Y TRAVESAÑO FABRICADO EN TUBERÍA TIPO PESADA CON ACABADO FINAL EN ABM, CIERRA PUERTA SUPERIOR, CERRADURA - MANIJA CON LLAVE.	M2	4.00	$ 880,147.00	$ 3,520,588.00
12.00	VARIOS				**$ 8,831,162.40**
12.1	PISO CONTINUO MULTICAPA DE MORTERO HIDRÁULICO POLIMÉRICO, PARA EXTERIORES. E=0.05M	M2	36.00	$ 80,225.00	$ 2,888,100.00
12.2	SUMINISTRO, TRANSPORTE E INSTALACIÓN DE AVISO ICA DE UNA MEDIDA APROXIMADA DE 1,5X1,0M. INCLUYE EL AVISO Y ESTRUCTURA METÁLICA, ADEMÁS DE LAS HERRAMIENTAS, EQUIPOS, INSUMOS Y MANO DE OBRA REQUERIDOS PARA SU CORRECTA INSTALACIÓN. EL DISEÑO DEPENDERA DE LAS NECESIDADES Y REQUERIMIENTOS DE LA ENTIDAD.	UND	1.00	$ 857,790.00	$ 857,790.00
12.3	GRIFERÍA PARA LAVAPLATOS. MONOCONTROL SIN MEZCLADOR TIPO "GRIVAL NOGAL" Ó SIMILAR, PARA COCINETAS	UND	1.00	$ 160,930.00	$ 160,930.00
12.4	SUMINISTRO E INSTALACIÓN MESON EN QUARZTONE BLANCO POLAR CON REENGRUESE DE 5 CMS SOBRE BASTIDOR DE MDF PARA COCINA. ANCHO 60 CM.SALPICADERO DE 8 CMS FRENTERO 4CMS. COCINETA	ML	3.10	$ 673,774.00	$ 2,088,699.40
12.5	LAVAPLATOS SENCILLO EN ACERO INOXIDABLE 55X43 CM SOCODA O EQUIVALENTE, PARA COCINETAS	UND	1.00	$ 211,011.00	$ 211,011.00
12.6	POCETA DE ASEO PREFABRICADA EN GRANITO 42X42X25 CM	UND	1.00	$ 189,132.00	$ 189,132.00
12.7	ASEO GENERAL TANTO DE LA PARTE INTERNA COMO EXTERNA Y DONDE SE HAYAN REALIZADO ACTIVIDADES PARA PODER EJECUTAR LA OBRA. (INCLUYE RETIRO DE SOBRANTES AL REALIZAR EL ASEO)	M2	500.00	$ 4,871.00	$ 2,435,500.00

TOTAL COSTO DIRECTO OBRA OFICINA MAGANGUE	**$ 572,595,803.98**

ITEM	**DESCRIPCION**	**UND.**	**CANT**	**V/UNIT.**	**V/TOT.**
1.00	**PRELIMINARES**				**$ 1,558,418.00**
1.1	INSTALACIÓN DE CERRAMIENTO PROVISIONAL EN TELA VERDE POLIETILENO DE ALTA DENSIDAD Y RESISTENCIA 65 GR/M2 CON UNA ALTURA DE 2,10 M, ESTACONES DE MADERA COMÚN PARA FIJACIÓN VERTICAL DE ALTURA DE 2,50 M PUESTO MÍNIMO CADA 2,0 M, ELEMENTOS DE FIJACIÓN, INCLUYE: SUMINISTRO, TRANSPORTE, INSTALACIÓN, EXCAVACIÓN, CONCRETO DE FUNDACIÓN PREPARADO EN OBRA DE 17 MPA - 2500 PSI, DIÁMETRO APROXIMADO 0,20 M Y PROFUNDIDAD APROXIMADA 0,30 M, CABLE O ALAMBRE TENSOR PARTE INFERIOR Y SUPERIOR HORIZONTAL, MANTENIMIENTO, DESMONTE Y TODOS LOS DEMÁS ELEMENTOS NECESARIOS PARA SU CORRECTA INSTALACIÓN Y OPERACIÓN.	M	42.00	$ 22,096.00	$ 928,032.00
1.2	LOCALIZACIÓN, TRAZADO Y REPLANTEO. SE UTILIZARÁ PERSONAL EXPERTO CON EQUIPO DE PRECISIÓN. TODOS LOS DEMÁS MATERIALES, ELEMENTOS, EQUIPOS, SEGUROS DE EQUIPOS, INSTALACIONES, COMBUSTIBLES, LUBRICANTES, ENERGÍA, TRANSPORTE, MANO DE OBRA, NECESARIOS PARA UNA CORRECTA EJECUCIÓN DE LOS TRABAJOS. SE HARÁN LOS CHEQUEOS O REVISIONES NECESARIOS, CON LA FRECUENCIA QUE INDIQUE LA INTERVENTORÍA. INCLUYE ELABORACIÓN DE PLANOS.	DÍA	1.00	$ 630,386.00	$ 630,386.00
2.00	**RETIROS Y DEMOLICIONES**				**$ 11,748,973.09**
2.1	DESMONTE DE TEJA DE ASBESTO CEMENTO EXISTENTE. LA MANO DE OBRA INCLUYE LOS ELEMENTOS REQUERIDOS DE PROTECCIÓN PARA EL MANEJO DE ESTA TEJA. INCLUYE MANEJO ESPECIAL, CARGUE, TRANSPORTE Y BOTADA ESPECIAL AL SITIO PERMITIDO DE MANEJO DE ESTOS ELEMENTOS.	M2	376.00	$ 7,046.00	$ 2,649,296.00
2.2	DESMONTE DE ESTRUCTURA DE CUBIERTA EXISTENTE. INCLUYE MANO DE OBRA DE DESINSTALACIÓN, CARGUE, TRANSPORTE Y BOTADA CON DERECHO A BOTADERO	M2	376.00	$ 6,974.00	$ 2,622,224.00
2.3	DESMONTE DE CIELO RASO EN MADERA. INCLUYE CARGUE, TRANSPORTE Y BOTADA Y/O TRANSPORTE AL SITIO DE DISPOSICIÓN FINAL	M2	376.00	$ 9,531.00	$ 3,583,656.00
2.4	RETIRO DE INSTALACIONES ELÉCTRICAS Y LUMINARIAS EXISTENTES. INCLUYE CARGUE, TRANSPORTE Y BOTADA Y/O TRANSPORTE AL SITIO DE DISPOSICIÓN FINAL	GL	1.00	$ 1,836,603.00	$ 1,836,603.00
2.5	RETIRO DE CIELO RASO EN SUPERBOARD. INCLUYE CARGUE, TRANSPORTE Y BOTADA EN LOS SITIOS OFICIALES, ADEMÁS DEL DERECHO AL BOTADERO	M2	64.00	$ 9,531.00	$ 609,984.00
2.6	DESMONTE DE ESCRITORIOS Y SILLAS.INCLUYE MOVERLOS O TRASLADARLOS A SITIO DE ACOPIO DEBIDAMENTE ENVUELTOS EN PLÁSTICO	UND	10.00	$ 19,182.00	$ 191,820.00
2.7	DESMONTE Y REINSTALACIÓN DE ARCHIVADORES, CONSISTE EN LA REUBICACIÓN DE LOS ARCHIVADORES EN EL ÁREA DOCUMENTAL, ESTO CON EL FIN DE REDISTRIBUIR EL ESPCIO ACORDE CON EL ACUERDO 049 DE 2000 REPOSITORÍO NORMATIVO ARCHIVO GERENERAL DE LA NACIÓN.INCLUYE RESANE DE PISOS.	M2	50.01	$ 1,509.00	$ 75,465.09
2.8	DEMOLICIÓN MAMPOSTERÍA CON UN ESPESOR HASTA 25CM. INCLUYE CARGUE, TRANSPORTE Y BOTADA DE ESCOMBROS EN BOTADEROS OFICIALES, DEMOLICIÓN DE REVOQUES Y DE ENCHAPES APLICADOS EN EL MURO A DEMOLER E INSTALACIONES EMBEBIDAS, ADEMÁS RECUPERACIÓN DE LOS MATERIALES APROVECHABLES O SU TRANSPORTE HASTA EL SITIO QUE LO INDIQUE LA INTERVENTORÍA; SE DEBE UTILIZAR CORTADORA PARA GARANTIZAR QUE LOS FILETES DE LA DEMOLICIÓN QUEDEN	M2	15.00	$ 11,995.00	$ 179,925.00
3.00	**CUBIERTA**				**$ 152,006,336.20**
3.1	SUMINISTRO, TRANSPORTE E INSTALACIÓN DE CUBIERTA (TEJA TERMOACÚSTICA KINGROOF ECO - PANEL TIPO SANDWICH CON AISLANTE EN POLISOCIANURATO PIR SAFE E:30MM BLANCO O VERDE, CALIBRE 28, LÁMINA INTERNA FOIL VINIL COLOR NATURAL O SIMILAR CON LAS MISMAS CARACTERISTICAS O MEJORES). INCLUYE LOS CABALLETES Y REMATES REQUERIDOS, ADEMÁS DE LOS ACCESORIOS PARA SU DEBIDA INSTALACIÓN, Y RECUBRIMIENTO DE COLOR.	M2	376.00	$ 136,791.00	$ 51,433,416.00
3.2	CONSTRUCCION Y MONTAJE DE ESTRUCTURA METALICA CON PERFILERIA TIPO PERFILERIA TIPO IPE, HEA, PHR-C, PTE PARA ELEMENTOS DE CUBIERTA, FACHADA, RAMPAS O ÁREAS DE CIRCULACIÓN METÁLICAS, SEGÚN PLANO. INCLUYE: SUMINISTRO Y TRANSPORTE DE LÁMINAS, PLATINAS, UNIONES, SOLDADURAS DE ACABADO O PRESENTACIÓN, ANCLAJES Y PERNOS A ESTRUCTURA DE CONCRETO Y MADERA. INCLUYE ENSAYOS A SOLDADURAS, OBRA FALSA Y TODO EL EQUIPO Y LA HERRAMIENTA NECESARIA PARA EL MONTAJE	KG	6008.68	$ 11,950.00	$ 71,803,726.00
3.3	SUMINISTRO, TRANSPORTE E INSTALACION DE CANAL PVC TIPO AMAZONAS O SIMILAR PARA AGUAS LLUVIAS CON MEDIDAS APROXIMADAS DE ANCHO 162,3MM POR ALTURAS DE 142,3MM (PARTE ALTA) Y 94,9MM (PARTE BAJA) CON LAS RESPECTIVAS UNIONES, TAPAS EXTERIORES Y UNIONES A LAS BAJANTES. INCLUYE ELEMENTOS PARA FIJACIÓN A CUBIERTA Y TODOS LOS DEMÁS REQUERIDOS PARA SU CORRECTA INSTALACIÓN Y FUNCIONAMIENTO	M	50.00	$ 70,274.00	$ 3,513,700.00
3.4	SUMINISTRO, TRANSPORTE E INSTALACIÓN BAJANTE PVC TIPO RAINMAX DE DIMENSIONES APROXIMADAS DE 100MMX100MM CON LAS RESPECTIVAS UNIONES, CODOS Y SOPORTES PARA SU FIJACIÓN. INCLUYE TODOS LOS DEMÁS ACCESORIOS Y ELEMENTOS PARA SU DEBIDA INSTALACIÓN.	M	44.20	$ 49,141.00	$ 2,172,032.20
3.5	SUMINISTRO, TRANSPORTE Y COLOCACIÓN DE CIELO RASO CONTINUO EN PVC BLANCO RESISTENTE A LA HUMEDAD, INCLUYE ESTRUCTURA METÁLICA DE ACERO GALVANIZADO, TORNILLOS Y ANCLAJES NECESARIOS PARA SU CORRECTO FUNCIONAMIENTO, LA TOTALIDAD DE LOS ACCESORIOS NECESARIOS PARA SU CORRECTA INSTALACIÓN, Y LAS PERFORACIONES Y RESANE	M2	30.00	$ 62,481.00	$ 1,874,430.00
3.6	SUMINISTRO, TRANSPORTE Y COLOCACIÓN DE CIELO RASO CONTINUO EN PLACA DE YESO RH 1/2" RESISTENTE A LA HUMEDAD, INCLUYE ESTRUCTURA METÁLICA DE ACERO GALVANIZADO, TORNILLOS Y ANCLAJES NECESARIOS PARA SU CORRECTO FUNCIONAMIENTO, LA TOTALIDAD DE LOS ACCESORIOS NECESARIOS PARA SU CORRECTA INSTALACIÓN, Y LAS PERFORACIONES Y RESANE	M2	376.00	$ 56,407.00	$ 21,209,032.00
4.00	**INSTALACIONES ELÉCTRICAS**				**$ 123,753,650.00**
4.1	SUMINISTRO, TRANSPORTE E INSTALACIÓN DE UPS TRIFÁSICO DE 10 KVA 208/120V ON LINE, AUTONOMÍA DE 10 MIN A PLANA CARGA. INCLUYE TODOS LAS HERRAMIENTAS, EQUIPOS, INSUMOS Y MANO DE OBRA PARA SU CORRECTA INSTALACIÓN.	UND	1.00	$ 25,212,819.00	$ 25,212,819.00
4.2	SUMINISTRO, TRANSPORTE E INSTALACIÓN DE LUMINARIA DE EMERGENCIA CERTIFICADA RETIE PARA CUARTOS TÉCNICOS. INCLUYE 1 METRO DE CABLE ENCAUCHETADO 3X18 HF FR LS Y CLAVIJA. INCLUYE TODOS LAS HERRAMIENTAS, EQUIPOS, INSUMOS Y MANO DE OBRA PARA SU CORRECTA INSTALACIÓN.	UND	8.00	$ 110,307.00	$ 882,456.00
4.3	SUMINISTRO, TRANSPORTE E INSTALACIÓN SALIDA DE ILUMINACIÓN EN TUBERÍA EMT 3/4", CON CAJA RAWELT 5800, TOMA CORRIENTE, INCLUYE CURVAS, Y ACCESORIOS PARA FIJACIÓN. INCLUYE TODOS LAS HERRAMIENTAS, EQUIPOS, INSUMOS Y MANO DE OBRA PARA SU CORRECTA INSTALACIÓN.	UND	88.00	$ 202,006.00	$ 17,776,528.00
4.4	SUMINISTRO, TRANSPORTE E INSTALACIÓN SALIDA DE TOMACORRIENTE DOBLE CON POLO A TIERRA EN MURO SOBREPUESTA EN TUBERÍA EMT 3/4", CON CAJA RAWELT 5800, TOMA CORRIENTE, INCLUYE CURVAS, Y ACCESORIOS PARA FIJACIÓN. INCLUYE TODOS LAS HERRAMIENTAS, EQUIPOS, INSUMOS Y MANO DE OBRA PARA SU CORRECTA INSTALACIÓN.	UND	2.00	$ 193,168.00	$ 386,336.00
4.5	SUMINISTRO, TRANSPORTE E INSTALACIÓN SALIDA DE TOMACORRIENTE DOBLE BLANCA CON POLO A TIERRA EN CANALETA METÁLICA SOBREPUESTA , TOMA CORRIENTE CABLE 12 AWG TRIPLE FASE AZUL Y ACCESORIOS PARA FIJACIÓN Y FUNCIONAMIENTO. INCLUYE TODOS LAS HERRAMIENTAS, EQUIPOS, INSUMOS Y MANO DE OBRA PARA SU CORRECTA INSTALACIÓN.	UND	41.00	$ 109,342.00	$ 4,483,022.00

4.6	SUMINISTRO, TRANSPORTE E INSTALACIÓN DE TABLERO TRIFÁSICO DE 18 CIRCUITOS PARA RED REGULADA SIN ESPACIO TOTALIZADOR, INCLUYE PROTECCIONES 12 DE 1X20A.. INCLUYE TODOS LAS HERRAMIENTAS, EQUIPOS, INSUMOS Y MANO DE OBRA PARA SU CORRECTA INSTALACIÓN.	UND	1.00	$ 962,099.00	$ 962,099.00
4.7	SUMINISTRO, TRANSPORTE E INSTALACIÓN SALIDA DE TOMACORRIENTE DOBLE CON POLO A TIERRA REGULADA EN CANALETA METÁLICA SOBREPUESTA , TOMA CORRIENTE Y ACCESORIOS PARA FIJACIÓN Y FUNCIONAMIENTO. INCLUYE TODOS LAS HERRAMIENTAS, EQUIPOS, INSUMOS Y MANO DE OBRA PARA SU CORRECTA INSTALACIÓN.	UND	41.00	$ 122,784.00	$ 5,034,144.00
4.8	SUMINISTRO, TRANSPORTE E INSTALACIÓN SALIDA DE INTERRUPTOR SENCILLO EN TUBERÍA EMT 3/4", CON CAJA RAWELT 2400, INTERRUPTOR, INCLUYE CURVAS, Y ACCESORIOS PARA FIJACIÓN. INCLUYE TODOS LAS HERRAMIENTAS, EQUIPOS, INSUMOS Y MANO DE OBRA PARA SU CORRECTA INSTALACIÓN Y FUNCIONAMIENTO.	UND	15.00	$ 142,930.00	$ 2,143,950.00
4.9	SUMINISTRO, TRANSPORTE E INSTALACIÓN DE TRANSFORMADOR DE 30 KVA REGULADOR 208/120V . INCLUYE TODOS LAS HERRAMIENTAS, EQUIPOS, INSUMOS Y MANO DE OBRA PARA SU CORRECTA INSTALACIÓN Y FUNCIONAMIENTO.	UND	1.00	$ 20,133,203.00	$ 20,133,203.00
4.10	SUMINISTRO, TRANSPORTE E INSTALACIÓN DE LUMINARIA LED 60X60 40W 120V . INCLUYE TODOS LAS HERRAMIENTAS, EQUIPOS, INSUMOS Y MANO DE OBRA PARA SU CORRECTA INSTALACIÓN Y FUNCIONAMIENTO.	UND	44.00	$ 164,533.00	$ 7,239,452.00
4.11	SUMINISTRO E INSTALACIÓN DE LUMINARIA PANEL LED REDONDO DE 18W 120V. PARA COCINA, BAÑOS CUARTO DE ASEO, PASILLOS. INCLUYE TODOS LAS HERRAMIENTAS, EQUIPOS, INSUMOS Y MANO DE OBRA PARA SU CORRECTA INSTALACIÓN Y FUNCIONAMIENTO.	UND	36.00	$ 34,017.00	$ 1,224,612.00
4.12	SUMINISTRO, TRANSPORTE E INSTALACIÓN DE ACOMETIDA TRIFÁSICA A TN1 DESDE TGD 3X1/0+1/0+1/0T, ELEMENTOS DE SUJECIÓN. INCLUYE TODOS LAS HERRAMIENTAS, EQUIPOS, INSUMOS Y MANO DE OBRA PARA SU CORRECTA INSTALACIÓN Y FUNCIONAMIENTO.	M	30.00	$ 228,907.00	$ 6,867,210.00
4.13	SUMINISTRO, TRANSPORTE E INSTALACIÓN DE CABLE TRENSADO 3X2 FASE ROJA O FASE AZUL PARA TOMACORRIENTES DESDE EL TABLERO HASTA LA PRIMERA TOMA DEL CIRCUITO. INCLUYE TODOS LAS HERRAMIENTAS, EQUIPOS, INSUMOS Y MANO DE OBRA PARA SU CORRECTA INSTALACIÓN Y FUNCIONAMIENTO.	M	180.00	$ 20,438.00	$ 3,678,840.00
4.14	SUMINISTRO, TRANSPORTE E INSTALACIÓN SALIDA PARA AA EN TUBERÍA EMT 1", CABLE 2X10+12T AWG LIBRE DE HALÓGENOS, CON CAJA RAWELT 5800, TOMA CORRIENTE, INCLUYE CURVAS, Y ACCESORIOS PARA FIJACIÓN. INCLUYE TODOS LAS HERRAMIENTAS, EQUIPOS, INSUMOS Y MANO DE OBRA PARA SU CORRECTA INSTALACIÓN Y FUNCIONAMIENTO.	UND	11.00	$ 308,877.00	$ 3,397,647.00
4.15	SUMINISTRO, TRANSPORTE E INSTALACIÓN DE CANALETA METÁLICA DE 12X5CM HOMOLOGADA BLANCA PINTURA ELECTROSTÁTICA, INCLUYE TROQUELES TRIPLES, ALAMBRE DE PUESTA A TIERRA Y MARCACIÓN RETIE. ADEMÁS, INCLUYE TODOS LAS HERRAMIENTAS, EQUIPOS, INSUMOS Y MANO DE OBRA PARA SU CORRECTA INSTALACIÓN Y FUNCIONAMIENTO.	M	190.00	$ 84,332.00	$ 16,023,080.00
4.16	SUMINISTRO, TRANSPORTE E INSTALACIÓN DE TABLERO TRIFASICO DE 30 CIRCUITOS CON ESPACIO PARA TOTALIZADOR INCLUYE TOTALIZADOR DE 100A A 200A, PROTECCIONES SEGÚN DIAGRAMA UNIFILAR, CONEXIÓN DE ACOMETIDA DESDE TRANSFORMADOR. ADEMÁS, INCLUYE TODOS LAS HERRAMIENTAS, EQUIPOS, INSUMOS Y MANO DE OBRA PARA SU CORRECTA INSTALACIÓN Y FUNCIONAMIENTO.	UND	1.00	$ 1,462,522.00	$ 1,462,522.00
4.17	SUMINISTRO, TRANSPORTE E INSTALACIÓN DE SENSOR ODC0S-I1W INFRARROJO MONTAJE EN TECHO. INCLUYE TODOS LAS HERRAMIENTAS, EQUIPOS, INSUMOS Y MANO DE OBRA PARA SU CORRECTA INSTALACIÓN Y FUNCIONAMIENTO.	UND	6.00	$ 203,360.00	$ 1,220,160.00
4.18	SUMINISTRO, TRANSPORTE E INSTALACIÓN DE SALIDA PARA SENSOR INFRARROJO EN TECHO, INCLUYE CABLE, CONECTORES Y ELEMENTOS DE FIJACIÓN. INCLUYE TODOS LAS HERRAMIENTAS, EQUIPOS, INSUMOS Y MANO DE OBRA PARA SU CORRECTA INSTALACIÓN Y FUNCIONAMIENTO.	UND	6.00	$ 135,615.00	$ 813,690.00
4.19	SUMINISTRO, TRANSPORTE E INSTALACIÓN DE SALIDA DE TOMACORRIENTE DOBLE CON POLO A TIERRA GFCI, INCLUYE CANA 2400 ALUMINIO FUNDIDO, CONECTORES Y SOPORTES DE TUBERÍA. INCLUYE TODOS LAS HERRAMIENTAS, EQUIPOS, INSUMOS Y MANO DE OBRA PARA SU CORRECTA INSTALACIÓN Y FUNCIONAMIENTO.	UND	1.00	$ 259,377.00	$ 259,377.00
4.20	SUMINISTRO, TRANSPORTE E INSTALACIÓN DE ACOMETIDA DESDE TN1 HASTA UPS Y TR1 3X6+4+8T, INCLUYE TERMINALES. ADEMÁS, INCLUYE TODOS LAS HERRAMIENTAS, EQUIPOS, INSUMOS Y MANO DE OBRA PARA SU CORRECTA INSTALACIÓN Y FUNCIONAMIENTO.	M	15.00	$ 92,271.00	$ 1,384,065.00
4.21	SUMINISTRO, TRANSPORTE E INSTALACIÓN DE TUBO EMT DE 2" PARA ACOMETIDA DE TGD A TN1. INCLUYE CURBAS, TERMINALES, UNIONES, Y ELEMENTOS DE SUJECIÓN. INCLUYE TODOS LAS HERRAMIENTAS, EQUIPOS, INSUMOS Y MANO DE OBRA PARA SU CORRECTA INSTALACIÓN Y FUNCIONAMIENTO.	M	20.00	$ 129,138.00	$ 2,582,760.00
4.22	SUMINISTRO, TRANSPORTE E INSTALACIÓN DE MEDIDOR ELECTRONICO CALIBRADO TRIFASICO CONTADOR HIKING ESTATICO TRIFA 5 - 100 A, PARA INSTALAR ANTES DEL TABLERO TN1 PARA TENER MEDIDA DE CONSUMO, INCLUYE CAJA DE MEDIDOR. INCLUYE TODOS LAS HERRAMIENTAS, EQUIPOS, INSUMOS Y MANO DE OBRA PARA SU CORRECTA INSTALACIÓN Y FUNCIONAMIENTO.	UND	1.00	$ 585,678.00	$ 585,678.00

1. INTRODUCCIÓN

El instituto Colombiano Agropecuario (ICA), celebró con la empresa GESTIÓN RURAL Y URBANA SAS, en adelante GRUSAS, el Contrato GGC-089-2024, cuyo objeto es: "ADECUACIÓN DE LA OFICINA LOCAL ICA MAGANGUÉ Y MANTENIMIENTO DE LA OFICINA LOCAL ICA EN CARMEN DE BOLIVAR, DEPARTAMENTO DE BOLÍVAR", el cual se ejecuta en el municipio del Carmen de bolivar como una de las dos frentes de trabajo, se dio inicio a la ejecución de la misma el 01 de noviembre del presente año y tiene como fecha de entrega final el 31 de diciembre de este mismo.

Dentro de las actividades previstas contempladas se encuentra el arreglo parcial de la cubierta de la edificación ya que la estructura actual de esta y la configuración de esta armadura puede sujetar la nueva cubierta, el tecnicismo de este concepto está bajo supervisión del ingeniero estructural.

Con el objetivo de dar cumplimiento a las condiciones contractuales suscritas, GRUSAS presenta el Plan de Trabajo, dando cumplimiento a las obligaciones contractuales requeridas en los documentos del proceso y en la minuta del contrato (Estudios previos, pliego de condiciones, anexo técnico, etc.) en donde se registra el estado actual de las instalaciones y las necesidades ya evidenciadas por el ICA, en consecuencia, se determinan las actividades a ejecutar en el desarrollo del contrato.

3. DESCRIPCIÓN DEL PROYECTO

LOCALIZACIÓN:

El proyecto se encuentra ubicado en el Carmen de bolivar, al inicio la ruta del sol sector 3, del departamento de Bolívar

EL CARMEN DE BOLIVAR

Ilustración 2 Localización del proyecto en el Carmen de Bolívar (imagen tomada de Google Earth)

Las instalaciones del ICA en el Carmen de Bolívar comparten recinto con la corporación AGROSAVIA, esta determinante debe tenerse en cuenta ya que esta activa en personal, actividad laboral y comparten algunos espacios.

4. ACTIVIDADES A DESARROLLAR

El Carmen de bolivar

Tabla 3 Presupuesto y cantidades frente de obra Magangué

ITEM	DESCRIPCION	UND.	CANT
1,00	PRELIMINARES		
1.1	INSTALACIÓN DE CERRAMIENTO PROVISIONAL EN TELA VERDE POLIETILENO DE ALTA DENSIDAD Y RESISTENCIA 65 GR/M2 CON UNA ALTURA DE 2,10 M, ESTACONES DE MADERA COMÚN PARA FIJACIÓN VERTICAL DE ALTURA DE 2,50 M PUESTO MÍNIMO CADA 2,0 M, ELEMENTOS DE FIJACIÓN, INCLUYE: SUMINISTRO, TRANSPORTE, INSTALACIÓN, EXCAVACIÓN, CONCRETO DE FUNDACIÓN PREPARADO EN OBRA DE 17 MPA - 2500 PSI, DIÁMETRO APROXIMADO 0,20 M Y PROFUNDIDAD APROXIMADA 0,30 M, CABLE O ALAMBRE TENSOR PARTE INFERIOR Y SUPERIOR HORIZONTAL, MANTENIMIENTO, DESMONTE Y TODOS LOS DEMÁS ELEMENTOS NECESARIOS PARA SU CORRECTA INSTALACIÓN Y OPERACIÓN.	M	42,00
1.2	LOCALIZACIÓN, TRAZADO Y REPLANTEO. SE UTILIZARÁ PERSONAL EXPERTO CON EQUIPO DE PRECISIÓN. TODOS LOS DEMÁS MATERIALES, ELEMENTOS, EQUIPOS, SEGUROS DE EQUIPOS, INSTALACIONES, COMBUSTIBLES, LUBRICANTES, ENERGÍA, TRANSPORTE, MANO DE OBRA, NECESARIOS PARA UNA CORRECTA EJECUCIÓN DE LOS TRABAJOS. SE HARÁN LOS CHEQUEOS O REVISIONES NECESARIOS, CON LA FRECUENCIA QUE INDIQUE LA INTERVENTORÍA. INCLUYE ELABORACIÓN DE PLANOS.	DÍA	1,00
2,00	RETIROS Y DEMOLICIONES		
2.1	DESMONTE DE TEJA DE ASBESTO CEMENTO EXISTENTE. LA MANO DE OBRA INCLUYE LOS ELEMENTOS REQUERIDOS DE PROTECCIÓN PARA EL MANEJO DE ESTA TEJA. INCLUYE MANEJO ESPECIAL, CARGUE, TRANSPORTE Y BOTADA ESPECIAL AL SITIO PERMITIDO DE MANEJO DE ESTOS ELEMENTOS.	M2	376,00
2.2	DESMONTE DE ESTRUCTURA DE CUBIERTA EXISTENTE. INCLUYE MANO DE OBRA DE DESINSTALACIÓN, CARGUE, TRANSPORTE Y BOTADA CON DERECHO A BOTADERO	M2	376,00
2.3	DESMONTE DE CIELO RASO EN MADERA. INCLUYE CARGUE, TRANSPORTE Y BOTADA Y/O TRANSPORTE AL SITIO DE DISPOSICIÓN FINAL	M2	376,00
2.4	RETIRO DE INSTALACIONES ELÉCTRICAS Y LUMINARIAS EXISTENTES. INCLUYE CARGUE, TRANSPORTE Y BOTADA Y/O TRANSPORTE AL SITIO DE DISPOSICIÓN FINAL	GL	1,00
2.5	RETIRO DE CIELO RASO EN SUPERBOARD. INCLUYE CARGUE, TRANSPORTE Y BOTADA EN LOS SITIOS OFICIALES, ADEMÁS DEL DERECHO AL BOTADERO	M2	64,00
2.6	DESMONTE DE ESCRITORIOS Y SILLAS.INCLUYE MOVERLOS O TRASLADARLOS A SITIO DE ACOPIO DEBIDAMENTE ENVUELTOS EN PLÁSTICO	UND	10,00
2.7	DESMONTE Y REINSTALACIÓN DE ARCHIVADORES, CONSISTE EN LA REUBICACIÓN DE LOS ARCHIVADORES EN EL ÁREA DOCUMENTAL, ESTO CON EL FIN DE REDISTRIBUIR EL ESPCIO ACORDE CON EL ACUERDO 049 DE 2000 REPOSITORÍO NORMATIVO ARCHIVO GERENERAL DE LA NACIÓN.INCLUYE RESANE DE PISOS.	M2	50,01
2.8	DEMOLICIÓN MAMPOSTERÍA CON UN ESPESOR HASTA 25CM. INCLUYE CARGUE, TRANSPORTE Y BOTADA DE ESCOMBROS EN BOTADEROS OFICIALES, DEMOLICIÓN DE REVOQUES Y DE ENCHAPES APLICADOS EN EL MURO A DEMOLER E INSTALACIONES EMBEBIDAS, ADEMÁS RECUPERACIÓN DE LOS MATERIALES APROVECHABLES O SU TRANSPORTE HASTA EL SITIO QUE LO INDIQUE LA INTERVENTORÍA; SE DEBE UTILIZAR CORTADORA PARA GARANTIZAR QUE LOS FILETES DE LA DEMOLICIÓN QUEDEN ORTOGONALES	M2	15,00
3,00	CUBIERTA		

3.1	SUMINISTRO, TRANSPORTE E INSTALACIÓN DE CUBIERTA (TEJA TERMOACÚSTICA KINGROOF ECO - PANEL TIPO SANDWICH CON AISLANTE EN POLISOCIANURATO PIR SAFE E:30MM BLANCO O VERDE, CALIBRE 28, LÁMINA INTERNA FOIL VINIL COLOR NATURAL O SIMILAR CON LAS MISMAS CARACTERISTICAS O MEJORES). INCLUYE LOS CABALLETES Y REMATES REQUERIDOS, ADEMÁS DE LOS ACCESORIOS PARA SU DEBIDA INSTALACIÓN, Y RECUBRIMIENTO DE COLOR.	M2	37A147:F152
3.2	CONSTRUCCIÓN Y MONTAJE DE ESTRUCTURA METÁLICA CON PERFILERIA TIPO PERFILERIA TIPO IPE, HEA, PHR-C, PTE PARA ELEMENTOS DE CUBIERTA, FACHADA, RAMPAS O ÁREAS DE CIRCULACIÓN METÁLICAS, SEGÚN PLANO. INCLUYE: SUMINISTRO Y TRANSPORTE DE LÁMINAS, PLATINAS, UNIONES, SOLDADURAS DE ACABADO O PRESENTACIÓN, ANCLAJES Y PERNOS A ESTRUCTURA DE CONCRETO Y MADERA. INCLUYE ENSAYOS A SOLDADURAS, OBRA FALSA Y TODO EL EQUIPO Y LA HERRAMIENTA NECESARIA PARA EL MONTAJE.	KG	6008,68
3.3	SUMINISTRO, TRANSPORTE E INSTALACION DE CANAL PVC TIPO AMAZONAS O SIMILAR PARA AGUAS LLUVIAS CON MEDIDAS APROXIMADAS DE ANCHO 162,3MM POR ALTURAS DE 142,3MM (PARTE ALTA) Y 94,9MM (PARTE BAJA) CON LAS RESPECTIVAS UNIONES, TAPAS EXTERIORES Y UNIONES A LAS BAJANTES. INCLUYE ELEMENTOS PARA FIJACIÓN A CUBIERTA Y TODOS LOS DEMÁS REQUERIDOS PARA SU CORRECTA INSTALACIÓN Y FUNCIONAMIENTO	M	50,00
3.4	SUMINISTRO, TRANSPORTE E INSTALACIÓN BAJANTE PVC TIPO RAINMAX DE DIMENSIONES APROXIMADAS DE 100MMX100MM CON LAS RESPECTIVAS UNIONES, CODOS Y SOPORTES PARA SU FIJACIÓN. INCLUYE TODOS LOS DEMÁS ACCESORIOS Y ELEMENTOS PARA SU DEBIDA INSTALACIÓN.	M	44,20
3.5	SUMINISTRO, TRANSPORTE Y COLOCACIÓN DE CIELO RASO CONTINUO EN PVC BLANCO RESISTENTE A LA HUMEDAD, INCLUYE ESTRUCTURA METÁLICA DE ACERO GALVANIZADO, TORNILLOS Y ANCLAJES NECESARIOS PARA SU CORRECTO FUNCIONAMIENTO, LA TOTALIDAD DE LOS ACCESORIOS NECESARIOS PARA SU CORRECTA INSTALACIÓN, Y LAS PERFORACIONES Y RESANE	M2	30,00
3.6	SUMINISTRO, TRANSPORTE Y COLOCACIÓN DE CIELO RASO CONTINUO EN PLACA DE YESO RH 1/2" RESISTENTE A LA HUMEDAD, INCLUYE ESTRUCTURA METÁLICA DE ACERO GALVANIZADO, TORNILLOS Y ANCLAJES NECESARIOS PARA SU CORRECTO FUNCIONAMIENTO, LA TOTALIDAD DE LOS ACCESORIOS NECESARIOS PARA SU CORRECTA INSTALACIÓN, Y LAS PERFORACIONES Y RESANE	M2	376,00
4,00	INSTALACIONES ELÉCTRICAS		
4.1	SUMINISTRO, TRANSPORTE E INSTALACIÓN DE UPS TRIFÁSICO DE 10 KVA 208/120V ON LINE, AUTONOMÍA DE 10 MIN A PLANA CARGA. INCLUYE TODOS LAS HERRAMIENTAS, EQUIPOS, INSUMOS Y MANO DE OBRA PARA SU CORRECTA INSTALACIÓN.	UND	1,00
4.2	SUMINISTRO, TRANSPORTE E INSTALACIÓN DE LUMINARIA DE EMERGENCIA CERTIFICADA RETIE PARA CUARTOS TÉCNICOS. INCLUYE 1 METRO DE CABLE ENCAUCHETADO 3X18 HF FR LS Y CLAVIJA. INCLUYE TODOS LAS HERRAMIENTAS, EQUIPOS, INSUMOS Y MANO DE OBRA PARA SU CORRECTA INSTALACIÓN.	UND	8,00
4.3	SUMINISTRO, TRANSPORTE E INSTALACIÓN SALIDA DE ILUMINACIÓN EN TUBERÍA EMT 3/4", CON CAJA RAWELT 5800, TOMA CORRIENTE, INCLUYE CURVAS, Y ACCESORIOS PARA FIJACIÓN. INCLUYE TODOS LAS HERRAMIENTAS, EQUIPOS, INSUMOS Y MANO DE OBRA PARA SU CORRECTA INSTALACIÓN.	UND	88,00
4.4	SUMINISTRO, TRANSPORTE E INSTALACIÓN SALIDA DE TOMACORRIENTE DOBLE CON POLO A TIERRA EN MURO SOBREPUESTA EN TUBERÍA EMT 3/4", CON CAJA RAWELT 5800, TOMA CORRIENTE, INCLUYE CURVAS, Y ACCESORIOS PARA FIJACIÓN. INCLUYE TODOS LAS HERRAMIENTAS, EQUIPOS, INSUMOS Y MANO DE OBRA PARA SU CORRECTA INSTALACIÓN.	UND	2,00
4.5	SUMINISTRO, TRANSPORTE E INSTALACIÓN SALIDA DE TOMACORRIENTE DOBLE BLANCA CON POLO A TIERRA EN CANALETA METÁLICA SOBREPUESTA , TOMA CORRIENTE CABLE 12 AWG TRIPLE FASE AZUL Y ACCESORIOS PARA FIJACIÓN Y FUNCIONAMIENTO. INCLUYE TODOS LAS HERRAMIENTAS, EQUIPOS, INSUMOS Y MANO DE OBRA PARA SU CORRECTA INSTALACIÓN.	UND	41,00
4.6	SUMINISTRO, TRANSPORTE E INSTALACIÓN DE TABLERO TRIFÁSICO DE 18 CIRCUITOS PARA RED REGULADA SIN ESPACIO TOTALIZADOR, INCLUYE PROTECCIONES 12 DE 1X20A.. INCLUYE TODOS LAS HERRAMIENTAS, EQUIPOS, INSUMOS Y MANO DE OBRA PARA SU CORRECTA INSTALACIÓN.	UND	1,00
4.7	SUMINISTRO, TRANSPORTE E INSTALACIÓN SALIDA DE TOMACORRIENTE DOBLE CON POLO A TIERRA REGULADA EN CANALETA METÁLICA SOBREPUESTA , TOMA CORRIENTE Y ACCESORIOS PARA FIJACIÓN Y FUNCIONAMIENTO. INCLUYE TODOS LAS HERRAMIENTAS, EQUIPOS, INSUMOS Y MANO DE OBRA PARA SU CORRECTA INSTALACIÓN.	UND	41,00

4.8	SUMINISTRO, TRANSPORTE E INSTALACIÓN SALIDA DE INTERRUPTOR SENCILLO EN TUBERÍA EMT 3/4", CON CAJA RAWELT 2400, INTERRUPTOR, INCLUYE CURVAS, Y ACCESORIOS PARA FIJACIÓN. INCLUYE TODOS LAS HERRAMIENTAS, EQUIPOS, INSUMOS Y MANO DE OBRA PARA SU CORRECTA INSTALACIÓN Y FUNCIONAMIENTO.	UND	15,00
4.9	SUMINISTRO, TRANSPORTE E INSTALACIÓN DE TRANSFORMADOR DE 30 KVA REGULADOR 208/120V . INCLUYE TODOS LAS HERRAMIENTAS, EQUIPOS, INSUMOS Y MANO DE OBRA PARA SU CORRECTA INSTALACIÓN Y FUNCIONAMIENTO.	UND	1,00
4.10	SUMINISTRO, TRANSPORTE E INSTALACIÓN DE LUMINARIA LED 60X60 40W 120V . INCLUYE TODOS LAS HERRAMIENTAS, EQUIPOS, INSUMOS Y MANO DE OBRA PARA SU CORRECTA INSTALACIÓN Y FUNCIONAMIENTO.	UND	44,00
4.11	SUMINISTRO E INSTALACIÓN DE LUMINARIA PANEL LED REDONDO DE 18W 120V. PARA COCINA, BAÑOS CUARTO DE ASEO, PASILLOS. INCLUYE TODOS LAS HERRAMIENTAS, EQUIPOS, INSUMOS Y MANO DE OBRA PARA SU CORRECTA INSTALACIÓN Y FUNCIONAMIENTO.	UND	36,00
4.12	SUMINISTRO, TRANSPORTE E INSTALACIÓN DE ACOMETIDA TRIFÁSICA A TN1 DESDE TGD 3X1/0+1/0+1/0T, ELEMENTOS DE SUJECIÓN. INCLUYE TODOS LAS HERRAMIENTAS, EQUIPOS, INSUMOS Y MANO DE OBRA PARA SU CORRECTA INSTALACIÓN Y FUNCIONAMIENTO.	M	30,00
4.13	SUMINISTRO, TRANSPORTE E INSTALACIÓN DE CABLE TRENSADO 3X2 FASE ROJA O FASE AZUL PARA TOMACORRIENTES DESDE EL TABLERO HASTA LA PRIMERA TOMA DEL CIRCUITO. INCLUYE TODOS LAS HERRAMIENTAS, EQUIPOS, INSUMOS Y MANO DE OBRA PARA SU CORRECTA INSTALACIÓN Y FUNCIONAMIENTO.	M	180,00
4.14	SUMINISTRO, TRANSPORTE E INSTALACIÓN SALIDA PARA AA EN TUBERÍA EMT 1", CABLE 2X10+12T AWG LIBRE DE HALÓGENOS, CON CAJA RAWELT 5800, TOMA CORRIENTE, INCLUYE CURVAS, Y ACCESORIOS PARA FIJACIÓN. INCLUYE TODOS LAS HERRAMIENTAS, EQUIPOS, INSUMOS Y MANO DE OBRA PARA SU CORRECTA INSTALACIÓN Y FUNCIONAMIENTO.	UND	11,00
4.15	SUMINISTRO, TRANSPORTE E INSTALACIÓN DE CANALETA METÁLICA DE 12X5CM HOMOLOGADA BLANCA PINTURA ELECTROSTÁTICA, INCLUYE TROQUELES TRIPLES, ALAMBRE DE PUESTA A TIERRA Y MARCACIÓN RETIE. ADEMÁS, INCLUYE TODOS LAS HERRAMIENTAS, EQUIPOS, INSUMOS Y MANO DE OBRA PARA SU CORRECTA INSTALACIÓN Y FUNCIONAMIENTO.	M	190,00
4.16	SUMINISTRO, TRANSPORTE E INSTALACIÓN DE TABLERO TRIFÁSICO DE 30 CIRCUITOS CON ESPACIO PARA TOTALIZADOR INCLUYE TOTALIZADOR DE 100A A 200A, PROTECCIONES SEGÚN DIAGRAMA UNIFILAR, CONEXIÓN DE ACOMETIDA DESDE TRANSFORMADOR. ADEMÁS, INCLUYE TODOS LAS HERRAMIENTAS, EQUIPOS, INSUMOS Y MANO DE OBRA PARA SU CORRECTA INSTALACIÓN Y FUNCIONAMIENTO.	UND	1,00
4.17	SUMINISTRO, TRANSPORTE E INSTALACIÓN DE SENSOR ODC0S-I1W INFRARROJO MONTAJE EN TECHO. INCLUYE TODOS LAS HERRAMIENTAS, EQUIPOS, INSUMOS Y MANO DE OBRA PARA SU CORRECTA INSTALACIÓN Y FUNCIONAMIENTO.	UND	6,00
4.18	SUMINISTRO, TRANSPORTE E INSTALACIÓN DE SALIDA PARA SENSOR INFRARROJO EN TECHO, INCLUYE CABLE, CONECTORES Y ELEMENTOS DE FIJACIÓN. INCLUYE TODOS LAS HERRAMIENTAS, EQUIPOS, INSUMOS Y MANO DE OBRA PARA SU CORRECTA INSTALACIÓN Y FUNCIONAMIENTO.	UND	6,00
4.19	SUMINISTRO, TRANSPORTE E INSTALACIÓN DE SALIDA DE TOMACORRIENTE DOBLE CON POLO A TIERRA GFCI, INCLUYE CANA 2400 ALUMINIO FUNDIDO, CONECTORES Y SOPORTES DE TUBERÍA. INCLUYE TODOS LAS HERRAMIENTAS, EQUIPOS, INSUMOS Y MANO DE OBRA PARA SU CORRECTA INSTALACIÓN Y FUNCIONAMIENTO.	UND	1,00
4.20	SUMINISTRO, TRANSPORTE E INSTALACIÓN DE ACOMETIDA DESDE TN1 HASTA UPS Y TR1 3X6+4+8T, INCLUYE TERMINALES. ADEMÁS, INCLUYE TODOS LAS HERRAMIENTAS, EQUIPOS, INSUMOS Y MANO DE OBRA PARA SU CORRECTA INSTALACIÓN Y FUNCIONAMIENTO.	M	15,00
4.21	SUMINISTRO, TRANSPORTE E INSTALACIÓN DE TUBO EMT DE 2" PARA ACOMETIDA DE TGD A TN1. INCLUYE CURBAS, TERMINALES, UNIONES, Y ELEMENTOS DE SUJECIÓN. INCLUYE TODOS LAS HERRAMIENTAS, EQUIPOS, INSUMOS Y MANO DE OBRA PARA SU CORRECTA INSTALACIÓN Y FUNCIONAMIENTO.	M	20,00
4.22	SUMINISTRO, TRANSPORTE E INSTALACIÓN DE MEDIDOR ELECTRONICO CALIBRADO TRIFASICO CONTADOR HIKING ESTATICO TRIFA 5 - 100 A, PARA INSTALAR ANTES DEL TABLERO TN1 PARA TENER MEDIDA DE CONSUMO, INCLUYE CAJA DE MEDIDOR. INCLUYE TODOS LAS HERRAMIENTAS, EQUIPOS, INSUMOS Y MANO DE OBRA PARA SU CORRECTA INSTALACIÓN Y FUNCIONAMIENTO.	UND	1,00
5,00	VARIOS		

5.1	ASEO GENERAL TANTO DE LA PARTE INTERNA COMO EXTERNA Y DONDE SE HAYAN REALIZADO ACTIVIDADES PARA PODER EJECUTAR LA OBRA. (INCLUYE RETIRO DE SOBRANTES AL REALIZAR EL ASEO)	M2	361,01

5. ALCANCE, DURACIÓN Y COSTO TOTAL

Se estima que el alcance de esta intervención pueda abarcar el arreglo total de la cubierta en la zona estipulada por el contratante así mismo subsanar la deficiencia de la red eléctrica en esta misma zona ya que no estaban en funcionamiento en su totalidad, las cantidades están contratadas según los requerimientos necesarios para la construcción de estas actividades.

La duración de este contrato tiene un estimado de 2 meses desde la fecha de inicio del mismo, que fue el 01 de noviembre del 2024 y fecha estimada finalización 31 de diciembre del 2024.

Para la sede de El Carmen de Bolívar , se ha asignado un presupuesto total de $290.825.857,00 con un plazo de ejecución de 4 meses contados a partir de la firma del acta de inicio y sujeto al cumplimiento de los requisitos de ejecución. Este plazo está previsto para finalizar el 31 de diciembre de 2024, salvo ajustes en el cronograma que se justifiquen.

6. ESTADO DE LA INFRAESTRUCTURA Y RECOMENDACIONES

Se observa pocos procedimientos de mantenimientos en la edificación, las zonas comunes se encuentran en estado aceptable, mientras que las oficinas no están en óptimas condiciones eléctricas, la cubierta manifiesta deterioro natural.
El estado de la estructura de la misma debe ser determinada por un profesional en el area.

7. RECOMENDACIONES GENERALES.

Las intervenciones deben hacerse en plenitud de las mismas, es por eso que se recomienda el desalojo total del área a intervenir ya que el retiro de la cubierta y la instalación nueva, así como las intervenciones eléctricas requieren de especificaciones de trabajo de sumo cuidado.

Es indispensable que la entidad asuma los requerimientos del contratista tales como el retiro de equipos de Aire Acondicionado y ambas unidades que los conforman, y el retiro de las redes de internet y la unidad de modem.

Se estima que las recomendaciones del ingeniero estructural estarán amarradas a cualquier modificación del presupuesto, es por eso que cualquiera sea su diagnostico debe ser tomado con prioridad y prontitud para la optimización del presupuesto y el tiempo en obra.

ITEM	**DESCRIPCION**	**UND.**	**CANT**	**V/UNIT.**	**SUBTOTAL**
1,00	**PRELIMINARES**				**$ 25.969.267,00**
1,1	Localización y replanteo	m2	815,90	$ 3.301,00	$ 2.693.285,90
1,2	Desmonte de ventanas	m2	4,880	$ 11.772,00	$ 57.447,36
1,3	Demolición manual de mesón en concreto	m2	1,80	$ 21.021,00	$ 37.837,80
1,4	Desmonte de aparato sanitario	und	5,00	$ 28.488,00	$ 142.440,00
1,5	Desmonte de lavamanos	und	4,00	$ 17.296,00	$ 69.184,00
1,6	Desmonte de división para baño en acrílico	m2	2,52	$ 4.763,00	$ 12.002,76
1,7	Demolición manual de enchape o pañete (revoque)	m2	49,12	$ 10.425,00	$ 512.076,00
1,8	Desmonte de marcos y puertas	und	13,00	$ 13.585,00	$ 176.605,00
1,9	Desmonte de poceta en acero inoxidable	und	1,00	$ 17.296,00	$ 17.296,00
1,10	Desmonte y reinstalación de archivadores, consiste en la reubicación de los archivadores en el área documental, esto con el fin de redistribuir el espacio acorde con el acuerdo 049 de 2000 Repositorio Normativo Archivo general de la Nación. Incluye resane de pisos.	m2	40,00	$ 1.509,00	$ 60.360,00
1,11	Instalación de CERRAMIENTO PROVISIONAL en tela verde polietileno de alta densidad y resistencia 65 gr/m2 con una altura de 2,10 m, estacones de madera común para fijación vertical de altura de 2,50 m puesto mínimo cada 2,0 m, elementos de fijación, Incluye: suministro, transporte, instalación, excavación, concreto de fundación preparado en Obra de 17 Mpa - 2500 psi, diámetro aproximado 0,20 m y profundidad aproximada 0,30 m, cable o alambre tensor parte inferior y superior horizontal, mantenimiento, desmonte y todos los demás elementos necesarios para su correcta instalación y operación.	m	190,00	$ 22.096,00	$ 4.198.240,00
1,12	Desmonte de canal en lámina ó PVC	m	28,38	$ 4.612,00	$ 130.888,56

1,13	Desmonte de cielo raso	m2	350,00	$ 7.935,00	$ 2.777.250,00
1,14	Desmonte de cortinas, persianas y cortineros.	m2	34,13	$ 10.564,00	$ 360.549,32
1,15	Desmonte de Aire Acondicionado	und	3,00	$ 137.407,00	$ 412.221,00
1,16	Desmonte de cerramiento en alambre de púas con postes de madera	m	90,00	$ 6.645,00	$ 598.050,00
1,17	Retiro y botada de escombros. Incluye cargue, transporte y botada de material.	m3	100,00	$ 39.157,00	$ 3.915.700,00
1,18	Rocería y limpieza manual y/o con equipo, control de maleza y crecimiento de material vegetal (incluye retiro y disposición final)	m2	1.201,18	$ 2.185,00	$ 2.624.578,30
1,19	Desmonte de teja de asbesto cemento existente. La mano de obra incluye los elementos requeridos de protección para el manejo de esta teja. Incluye manejo especial, cargue, transporte y botada especial al sitio permitido de manejo de estos elementos.	m2	381,00	$ 7.046,00	$ 2.684.526,00
1,20	Desmonte de estructura de cubierta existente. Incluye mano de obra de desinstalación, cargue, transporte y botada con derecho a botadero	m2	381,00	$ 6.974,00	$ 2.657.094,00
1,21	Desmonte de escritorios y sillas. Incluye moverlos o trasladarlos a sitio de acopio debidamente envueltos en plástico	und	10,00	$ 19.182,00	$ 191.820,00
1,22	Poda de ramas	und	30,00	$ 49.706,00	$ 1.491.180,00
1,23	Demolición pisos, andenes, cunetas y bordillos de concreto, en cualquier espesor. Incluye: retiro de malla de refuerzo si existe, compresor neumático con martillo, además recuperación de los materiales aprovechables, cargue, transporte hasta el sitio de acopio indicado por la interventoría y botada de escombros	m3	5,00	$ 29.727,00	$ 148.635,00
2,00	**MOVIMIENTO DE TIERRAS**				**$ 6.464.687,73**
2,1	Excavación manual h= 0-2 m. Incluye cargue y retiro.	m3	87,75	$ 51.093,00	$ 4.483.410,75
2.2	Lleno compactado con recebo común	m3	16,54	$ 119.787,00	$ 1.981.276,98
3,00	**CERRAMIENTO**				**$ 117.709.707,00**
3,1	Mantenimiento cerramiento existente en Pintura anticorrosiva y acabado en esmalte para exteriores.	m	90,00	$ 17.363,00	$ 1.562.670,00
3,2	Cerramiento en tubo redondo galvanizado de 2". Incluye pata de anclaje y tapón metálico pintado con Pintura anticorrosiva y acabado en esmalte para exteriores.	m	90,00	$ 718.220,00	$ 64.639.800,00
3,3	Acero para refuerzo	Kg	3.492,00	$ 6.491,00	$ 22.666.572,00
3,4	Concreto de 3000 psi	m3	30,00	$ 718.355,00	$ 21.550.650,00
3,5	Solado en concreto ciclópeo	m3	15,00	$ 486.001,00	$ 7.290.015,00
4,00	**INSTALACIONES HIDRÁULICAS Y SANITARIAS**				**$ 3.519.255,00**
4,1	Tubería cpvc presión Ø= 1/2" (incl. accesorios)	m	60,00	$ 14.159,00	$ 849.540,00
4,2	Tubería PVC presión Ø= 2" (incl. accesorios)	m	20,00	$ 21.220,00	$ 424.400,00

4,3	Tubería PVC sanitaria Ø= 3" (incl. accesorios)	m	20,00	$ 32.453,00	$ 649.060,00
4,4	Punto hidráulico cpvc de 1/2" (3 m)	und	2,00	$ 65.661,00	$ 131.322,00
4,5	Válvula de registro de 1/2" incluye tapa d e registro	und	2,00	$ 39.461,00	$ 78.922,00
4,6	Tubería drenaje mini S p l i t PVC 1" (incl. accesorios)	m	25,00	$ 20.204,00	$ 505.100,00
4,7	Rejilla para piso en PVC 3"x2"	und	2,00	$ 9.168,00	$ 18.336,00
4,8	Tubería PVC Ø= 4" (incl. accesorios)	m	15,00	$ 36.573,00	$ 548.595,00
4,9	Suministro e Instalación de Tubería PVC-s sanitaria Ø= 2" (Incluye accesorios)	m	15,00	$ 20.932,00	$ 313.980,00
5,00	**CUBIERTA**				**$ 161.893.544,00**
5,1	Suministro, transporte e instalación de cubierta (Teja Termoacústica kingroof ECO - panel tipo sándwich con aislante en polisocianurato PIR SAFE e:30mm Blanco o verde, calibre 28, lámina interna Foil Vinil Color natural). Incluye los caballetes y remates requeridos, además de los accesorios para su debida instalación, y recubrimiento de color.	m2	390,00	$ 136.791,00	$ 53.348.490,00
5,2	Construcción y montaje de estructura metálica con perfilería tipo PERFILERIA TIPO IPE, HEA, PHR-C, PTE para elementos de cubierta, fachada, rampas o áreas de circulación metálicas, según diseño. Incluye: suministro y transporte de láminas, platinas, uniones, soldaduras de acabado o presentación, anclajes y pernos a estructura de concreto y madera. Incluye ensayos a soldaduras, obra falsa y todo el equipo y la herramienta necesaria para el montaje.	kg	7262,30	$ 11.950,00	$ 86.784.485,00
5,3	Canal en lámina galvanizada Cal. 20 S= 50 cm	m	30,00	$ 102.625,00	$ 3.078.750,00
5,4	Cielo raso continuo en PVC blanco resistente a la humedad, incluye estructura metálica de acero galvanizado, tornillos y anclajes necesarios para su correcto funcionamiento, la totalidad de los accesorios necesarios para su correcta instalación, y las perforaciones y resane	m2	299,00	$ 62.481,00	$ 18.681.819,00
6,00	**ENHAPES Y ACCESORIOS**				**$ 3.848.936,50**
6,1	Suministro e i n s t a l a c i ó n d e E n c h a p e e n cerámica 30x60 cm	m2	27,90	$ 76.719,00	$ 2.140.460,10
6,2	Suministro e instalación de piso en porcelanato 60x60	m2	12,60	$ 105.794,00	$ 1.333.004,40
6,3	Suministro e instalación de Guarda escoba en porcelanato	ml	15,50	$ 24.224,00	$ 375.472,00
7,00	**BAÑOS**				**$ 10.414.255,00**
7,1	Sanitario Smart elongado color blanco	und	4,00	$ 573.420,00	$ 2.293.680,00
7,2	Lavamanos d e i n c r u s t a r b l a n c o t i p o s a n lorenzo	und	3,00	$ 308.460,00	$ 925.380,00
7,3	Orinal mediano blanco grifería tipo push	und	2,00	$ 663.517,00	$ 1.327.034,00
7,4	Grifería lavamanos mono control ahorradora	und	4,00	$ 189.672,00	$ 758.688,00

7,5	Grifería lavaplatos Mono control	und	1,00	$ 212.523,00	$ 212.523,00
7,6	Dispensador de toallas de papel	und	2,00	$ 90.008,00	$ 180.016,00
7,7	Dispensador de jabón líquido	und	2,00	$ 70.555,00	$ 141.110,00
7,8	Dispensador de papel higiénico	und	2,00	$ 116.410,00	$ 232.820,00
7,9	Barra de Seguridad Horizontal 36" (92 cm) para Discapacitados en acero inoxidable, de sobreponer a la pared, Ref. 30-AA-8736 de A&A, o equivalente	und	2,00	$ 244.318,00	$ 488.636,00
7,10	Espejo Cristal Biselado de 4 mm colocado flotado sobre muro, para baños W.C.	m2	6,00	$ 117.200,00	$ 703.200,00
7,11	Mesón - Lavamanos en QUARZTONE BLANCO POLAR ancho 60 cm, salpicadero 8 cm y frentero de 4 cm para Baño. Incluye fabricación, suministro e Instalación.	m2	4,00	$ 787.792,00	$ 3.151.168,00
8,00	**PAÑETES, ESTUCO Y PINTURA**				**$ 23.772.988,00**
8,1	Estuco acrílico en muros	m2	50,00	$ 15.923,00	$ 796.150,00
8,2	Pañete muro (incl. filos y dilataciones)	m2	50,00	$ 27.522,00	$ 1.376.100,00
8,3	Pintura exterior en Koraza	m2	526,50	$ 33.804,00	$ 17.797.806,00
8,4	Pintura con vinilo en muros	m2	252,00	$ 15.091,00	$ 3.802.932,00
9,00	**CARPINTERÍA DE MADERA**				**$ 7.955.775,45**
9,1	Mueble inferior de cocina h= 90 cm	m	2,15	$ 780.574,00	$ 1.678.234,10
9,2	Mueble superior de cocina h= 60 cm	m	2,15	$ 484.269,00	$ 1.041.178,35
9,3	Puerta en madera entamborada de 0.80 x 2.05 m	und	11,00	$ 476.033,00	$ 5.236.363,00
10,00	**INSTALACIONES ELÉCTRICAS**				**$ 181.881.404,00**
10,1	Suministro e instalación Unidad acondicionadora Mini Split tipo pared 12.000 btu/h incluye condensadora, evaporadora y control remoto. Compresor INVERTER. Eliminación de bacterias	und	2,00	$ 2.124.225,00	$ 4.248.450,00
10,2	Suministro e instalación Unidad acondicionadora Mini Split tipo pared 24.000 btu/h incluye condensadora, evaporadora y control remoto. Compresor INVERTER. Eliminación de bacterias	und	2,00	$ 4.982.437,00	$ 9.964.874,00
10,3	Suministro e instalación de UPS Trifásico de 10 KVA 208/120V on line, autonomía de 10 min a plana carga	und	1,00	$ 25.212.819,00	$ 25.212.819,00
10,4	Suministro e instalación de Luminaria de emergencia certificada RETIE para cuartos técnicos. Incluye 1 metro de cable encauchetado 3x18 HF FR LS y clavija.	und	7,00	$ 110.307,00	$ 772.149,00
10,5	Suministro e instalación salida de iluminación en tubería EMT 3/4", con caja rawelt 5800, toma corriente, incluye curvas, y accesorios para fijación.	und	46,00	$ 202.006,00	$ 9.292.276,00

10,6	Suministro e instalación salida de interruptor triple en tubería EMT 3/4", con caja rawelt 2400, interruptor, incluye curvas, y accesorios para fijación. AUDITORIO	und	1,00	$ 198.800,00	$ 198.800,00
10,7	Suministro e instalación salida de tomacorriente doble con polo a tierra en muro sobrepuesta en tubería EMT 3/4", con caja rawelt 5800, toma corriente, incluye curvas, y accesorios para fijación.	und	8,00	$ 193.168,00	$ 1.545.344,00
10,8	Suministro e instalación salida de tomacorriente doble BLANCA con polo a tierra en CANALETA METALICA sobrepuesta, toma corriente CABLE 12 AWG TRIPLE FASE AZUL y accesorios para fijación Y FUNCIONAMIENTO	und	22,00	$ 109.342,00	$ 2.405.524,00
10,9	Suministro e instalación de tablero Trifásico de 18 circuitos para red regulada sin espacio totalizador, incluye protecciones 12 d e 1x20A.	und	1,00	$ 962.099,00	$ 962.099,00
10,10	Suministro e instalación salida de tomacorriente doble con polo a tierra REGULADA en CANALETA METALICA sobrepuesta, toma corriente y accesorios para fijación Y FUNCIONAMIENTO	und	22,00	$ 122.784,00	$ 2.701.248,00
10,11	Suministro de mano de obra para el acondicionamiento conexión del medidor de energía, marcación de fases, adecuaciones.	und	1,00	$ 455.523,00	$ 455.523,00
10,12	Suministro e instalación salida de interruptor SENCILLO en tubería EMT 3/4", con caja rawelt 2400, interruptor, incluye curvas, y accesorios para fijación.	und	9,00	$ 142.930,00	$ 1.286.370,00
10,13	Suministro e instalación de transformador de 30 kva regulador 208/120v	und	1,00	$ 20.133.203,00	$ 20.133.203,00
10,14	Suministro e instalación de luminaria LED 60x60 40W 120V AUDITORIO	und	12,00	$ 164.533,00	$ 1.974.396,00
10,15	Suministro e instalación de un sistema de puesta a tierra con tres varillas cobre-cobre de 2,4m x 5/8", soldadura exotérmica y cable 1/0 cobre desnudo 25ml para el transformador.	und	1,00	$ 5.692.799,00	$ 5.692.799,00
10,16	Suministro e instalación de luminaria panel LED redodo de 18W 120V. Para cocina, baños cuartos de aseo, pasillos.	und	20,00	$ 34.017,00	$ 680.340,00
10,17	Suministro e instalación de planta eléctrica de 30 KVA, encabinada, en cuarto separado, con transferencia y tanque de reserva.	und	1,00	$ 51.995.849,00	$ 51.995.849,00
10,18	Suministro e instalación de Acometida trifásica a TRANSFERENCIA DESDE PLANTA Y TRASNFORMADOR 3x1/0+1/0+1/0T, incluye elementos de sujeción	m	45,00	$ 228.907,00	$ 10.300.815,00
10,19	DESMONTE DE REDES ELECTRICAS EXISTENTES. INCLUYE EL RETIRO DE TODAS LAS LUMIANRIAS	gl	1,00	$ 1.836.603,00	$ 1.836.603,00

10,20	SUMINISTRO E INSTALACIÓN DE CABLE TRENSADO 3X12 FASE ROJA O FASE AZUL PARA TOMACORRIENTES DESDE EL TABLERO HASTA LA PRIMERA TOMA DEL CIRCUITO	m	120,00	$ 20.438,00	$ 2.452.560,00
10,21	Suministro e instalación salida PARA AA en tubería EMT 1", cable 2X10+12T awg Libre de halógenos, con caja rawelt 5800, toma corriente, incluye curvas, y accesorios para fijación.	und	11,00	$ 308.877,00	$ 3.397.647,00
10,22	Suministro e instalación DE CANALETA METALICA DE 12X5CM HOMOLOGADA BLANCA PINTURA ELECTROSTÁTICA, INCLUYE TROQUELES TRIPLES, ALAMBRE DE PUESTA A TIERRA Y MARCACION RETIE.	m	90,00	$ 84.332,00	$ 7.589.880,00
10,23	Suministro e instalación de tablero trifásico de 30 circuitos con espacio para totalizador incluyen totalizador de 100A a 200A, protecciones según diagrama unifilar, conexión de acometida desde TRANSFORMADOR.	und	1,00	$ 1.462.522,00	$ 1.462.522,00
10,24	Suministro e instalación de Sensor Odc0S-I1W Infrarrojo Montaje En Techo.	und	5,00	$ 203.360,00	$ 1.016.800,00
10,25	Suministro e instalación salida para sensor infrarrojo en techo, incluye cable, conectores y elementos de fijación.	und	5,00	$ 135.615,00	$ 678.075,00
10,26	Suministro e instalación de salida de tomacorriente doble con polo a tierra GFCI, incluye cana 2400 aluminio fundido, conectores y soportes de tubería y en si todo lo necesario para su funcionamiento.	und	2,00	$ 259.377,00	$ 518.754,00
10,27	Suministro e instalación de canalización 2x3" tubo PVC 3", incluye excavación y relleno con el mismo material excavado	m	50,00	$ 85.251,00	$ 4.262.550,00
10,28	Suministro e instalación de acometida desde tn1 hasta UPS y TR1 2x6+6+8T, incluye terminales	m	15,00	$ 72.843,00	$ 1.092.645,00
10,29	Suministro e instalación de caja CS274 de 0,6x0,6m con tapa con marco y contramarco en ladrillo recocido, INCLUYE EXCAVACIÓN	und	3,00	$ 529.561,00	$ 1.588.683,00
10,30	Suministro e instalación de tubo EMT de 3" para acometida de planta a transferencia	m	20,00	$ 171.819,00	$ 3.436.380,00
10,31	Suministro e instalación de canalización 1x3" tubo PVC 3", incluye excavación y relleno con el mismo material excavado	m	5,00	$ 60.085,00	$ 300.425,00
10,32	Suministro e instalación de reflector LED con panel solar de 200w	und	6,00	$ 404.167,00	$ 2.425.002,00
11,00	**CARPINTERÍA METÁLICA**				**$ 20.334.821,90**
11,1	Marco metálico lámina Cal. 20 a=0.80 m (incl. pintura)	und	11,00	$ 191.184,00	$ 2.103.024,00
11,2	Ventana en aluminio corrediza (vidrio 4 mm)	m2	26,00	$ 342.220,00	$ 8.897.720,00

11,3	División para baño en lámina Cal. 20 (incl. pintura)	m2	13,30	$ 392.003,00	$ 5.213.639,90
11,4	Mantenimiento de ventanas y rejas metálicas existentes de dimensiones variables, incluye desmonte y reinstalación, además de pintura anticorrosiva	und	10,00	$ 59.985,00	$ 599.850,00
11,5	Puerta de dos secciones en vidrio templado con marco y travesaño fabricado en tubería tipo pesada con acabado final en ABM, cierra puerta superior, cerradura - manija con llave.	m2	4,00	$ 880.147,00	$ 3.520.588,00
12,00	**VARIOS**				**$ 8.831.162,40**
12,1	Piso continuo multicapa de mortero hidráulico polimérico, para exteriores. E=0.05m	m2	36,00	$ 80.225,00	$ 2.888.100,00
12,2	Suministro, transporte e instalación de aviso ICA de una medida aproximada de 1,5x1,0m. Incluye el aviso y estructura metálica, además de las herramientas, equipos, insumos y mano de obra requeridos para su correcta instalación. El diseño dependerá de las necesidades y requerimientos de la entidad.	und	1,00	$ 857.790,00	$ 857.790,00
12,3	Grifería para lavaplatos. Mono control sin mezclador tipo "Grival Nogal" o similar, para Cocinetas	und	1,00	$ 160.930,00	$ 160.930,00
12,4	Suministro e instalación mesón en quarztone blanco polar con reengruese de 5 cms sobre bastidor de mdf para cocina. Ancho 60 cm. Salpicadero de 8 cms frentero 4cms. Cocineta	ML	3,10	$ 673.774,00	$ 2.088.699,40
12,5	Lavaplatos sencillo en acero inoxidable 55x43 cm Socoda o equivalente, para Cocinetas	und	1,00	$ 211.011,00	$ 211.011,00
12,6	Poceta de aseo prefabricada en granito	und	1,00	$ 189.132,00	$ 189.132,00
12,7	Aseo general tanto de la parte interna como externa y donde se hayan realizado actividades para poder ejecutar la obra. (incluye retiro de sobrantes al realizar el aseo)	m2	500,00	$ 4.871,00	$ 2.435.500,00

Alcance, Duración y costo Total.

Las actividades y cantidades estimadas están alineadas con los requerimientos específicos de la sede de Magangué. Se podrán considerar actividades adicionales en esta sede, según la evaluación del estado de la estructura metálica, que se realizará una vez el equipo esté en campo, se inicie la obra, y se elabore el informe de inspección de la cubierta, conforme a las obligaciones del contrato.

Para la sede de Magangué, se ha asignado un presupuesto total de $761,676,250.33, con un plazo de ejecución de 4 meses contados a partir de la firma del acta de inicio y sujeto al cumplimiento de los requisitos de ejecución. Este plazo está previsto para finalizar el 31 de diciembre de 2024, salvo ajustes en el cronograma que se justifiquen.

5. ESTADO DE LA INFRAESTRUCTURA Y RECOMENDACIONES

Estado de la Infraestructura

Durante la visita de inspección a la obra de la zona ICA, se observaron condiciones deficientes en la infraestructura y mantenimiento de las instalaciones.

Cerramiento y Acceso

- Se encontró deterioramiento en el cerramiento perimetral.
- Gran cantidad de maleza en el cerramiento y alrededores.
- Cerramiento tubular en la entrada.
- Cerramiento de concreto en los costados derecho e izquierdo.
- Cerramiento en alambre de púa para continuar el cerramiento en concreto en ambos costados
- Camino de arena que conduce a las oficinas.

Oficinas

- Estado no óptimo de las ventanas.
- Red eléctrica en mal estado, con quejas por parte de los funcionarios.
- Mal estado de algunas oficinas, incluyendo:
- Ventanas rotas o deterioradas y si seguridad.
- Puertas dañadas.
- Baños fuera de servicio.
- Sanitarios y lavamanos en mal estado y algunos fuera de servicio
- Poceta de laboratorio fuera de servicio
- Cielo raso en deterioro y en parte inexistente y podrido por temas de humedad.

Cubierta

La Cubierta en asbesto cemento se Observa muy deteriorada, en mal estado y con presencia de animales entre la cubierta y el cielo raso

Recomendaciones

- Se requiere dejar la zona libre para poder ejecutar las actividades pertinentes ya que se va a Cambiar las instalaciones eléctricas será necesario cortar la corriente y no se podrá continuar con las funciones.

- Se recomienda seguir el cronograma, para la optimización de recursos, personal y actividades para lograr los objetivos, planteados

- Se evidencian redes de voz y datos, y sistema cerrado de cámaras, adicional a ello unos reflectores, los cuales están dentro de los límites de la intervención, por tal razón, solicitamos el desmonte oportuno de los mismos por parte de la entidad. Y si es de requerirse, su posterior instalación.

- Se debe hacer una inspección completa del estado de la cubierta, toda vez, que en solo algunos pequeños tramos se puede determinar el estado actual de la cubierta, sin embargo, se logra evidenciar que son cerchas metálicas convencionales.
- El reajuste presupuestal y la adición de actividades NO PREVISTAS se realizará una vez se tenga el informe detallado de cubierta y con ellos los recursos disponibles para nuevas actividades, en este sentido, se recomienda dar mayor alcance a las actividades externas y la impermeabilización de algunas de las placas externas de la sede

INTRODUCCIÓN

La empresa **Gestión Rural y Urbana SAS** en cumplimiento a lo establecido en la ley 1562 de 2012, el decreto 1072 del 2015 y Resolución 312 del 2019 de la normatividad vigente, ha estructurado el sistema de gestión de la seguridad y salud en el trabajo (SG-SST), que tiene como propósito la estructuración de la acción conjunta entre la empresa y los trabajadores, en la aplicación de las medidas de Seguridad y Salud en el Trabajo (SST) a través del mejoramiento continuo de las condiciones y el medio ambiente laboral, y el control eficaz de los peligros y riesgos en el lugar de trabajo.

Para su efecto, la empresa aborda la prevención de las lesiones y enfermedades laborales, la protección y promoción de la salud de los trabajadores, a través de la implementación de un método lógico y por etapas cuyos principios se basan en el ciclo PHVA (Planificar, Hacer, Verificar y Actuar) y que incluye la política, organización, planificación, aplicación, evaluación, auditoría y acciones de mejora.

El desarrollo articulado de estos elementos permitirá cumplir con los propósitos del SG-SST para el objeto del contrato “ADECUACIÓN DE LA OFICINA LOCAL ICA MAGANGUÉ Y MANTENIMIENTO DE LA OFICINA LOCAL ICA EN CARMEN DE BOLIVAR, DEPARTAMENTO DE BOLÍVAR”

Este SG-SST, se caracteriza por su adaptabilidad al tamaño y características del contrato, para centrarse en la identificación y control de los peligros y riesgos asociados con su actividad.

El esquema del sistema de gestión se describe en las siguientes etapas:

- Política
- Organización
- Planificación
- Aplicación
- Evaluación
- Auditoría
- Mejoramiento

1. POLITICA SG-SST

La alta dirección ha definido una política de SG-SST que es comunicada y divulgada a través de procesos de inducción, reinducción, actividades y ciclos de formación, capacitación y por medio de material publicitario, adicionalmente se encuentra publicada en las instalaciones administrativas y en todos los centros de trabajo.

La política es revisada anualmente en reuniones de revisión por la dirección y en caso de que se requiera y de acuerdo con los cambios empresariales y en materia de SST es actualizada.

Se anexa la política SST y las demás políticas del SG-SST GRU SAS.

Anexo 1. Políticas del SG-SST GRU SAS

2. ORGANIZACIÓN DEL SISTEMA DE GESTIÓN DE SEGURIDAD Y SALUD EN EL TRABAJO (SG-SST)

2.1. Definiciones y abreviaturas

Accidente de trabajo: Suceso repentino que sobreviene por causa o con ocasión del trabajo y produce en el trabajador una lesión orgánica, una perturbación funcional o psiquiátrica, una invalidez o la muerte

Acción correctiva: Acción tomada para eliminar la causa de una no conformidad.

Acción de mejora: Acción de optimización del Sistema de Gestión de la Seguridad y Salud en el Trabajo SG-SST.

Acción preventiva: Acción para eliminar o mitigar la(s) causa(s) de una no conformidad

Actividad rutinaria. Actividad que forma parte de la operación normal de la organización, se ha planificado y es estandarizable.

Actividad no rutinaria. Actividad que no forma parte de la operación normal de la organización, que no es estandarizable debido a la diversidad de escenarios y condiciones bajo las cuales pudiera presentarse.

Análisis del riesgo. Proceso para comprender la naturaleza del riesgo (véase el numeral 2.29) y para determinar el nivel del riesgo.

Consecuencia. Resultado, en términos de lesión o enfermedad, de la materialización de un riesgo, expresado cualitativa o cuantitativamente.

Efectividad: Logro de los objetivos del SG.-SST con la máxima eficacia eficiencia.

Eficiencia: Relación entre el resultado alcanzado y los recursos utilizados.

Emergencia: situación de peligro o desastre o la inminencia del mismo, que afecta el funcionamiento normal de la empresa.

Enfermedad laboral: Resultado de la exposición a factores de riesgo inherentes a la actividad laboral o del medio en el que el trabajador se ha visto obligado a trabajar. Ley 1562/2012.

Exposición. Situación en la cual las personas se exponen a los peligros.

Indicadores de estructura: Medidas verificables de la disponibilidad y acceso a recursos, políticas y organización con que cuenta la empresa las demandas y necesidades en SG- SST.

Indicadores de proceso: Medidas verificables del grado de desarrollo e implementación del SG-SST.

Indicadores de resultado: Medidas verificables de los cambios alcanzados en el período definido, teniendo como base la programación hecha y la aplicación de recursos propios del programa o del sistema de gestión.

Identificación del peligro. Proceso para reconocer si existe un peligro y definir sus características.

Medida(s) de control. Medida(s) implementada(s) con el fin de minimizar la ocurrencia de incidentes.

Mejora continua. Proceso recurrente de optimización del SG.SST

Nivel de riesgo. Magnitud de un riesgo resultante del producto del nivel de probabilidad por el nivel de consecuencia.

No conformidad: No cumplimiento de un requisito

Partes Interesadas. Persona o grupo dentro o fuera del lugar de trabajo involucrado o afectado por el desempeño de seguridad y seguridad y salud en el trabajo de una organización.

Peligro: Fuente, situación o acto con potencial de daño en términos de enfermedad o lesión a las personas, o una combinación de estos.

Probabilidad. Grado de posibilidad de que ocurra un evento no deseado y pueda producir consecuencias

Riesgo. Combinación de la probabilidad de que ocurra un(os) evento(s) o exposición(es) peligroso(s), y la severidad de lesión o enfermedad, que puede ser causado por el (los) evento(s) o la(s) exposición(es).

Riesgo Aceptable. Riesgo que ha sido reducido a un nivel que la organización puede tolerar con respecto a sus obligaciones legales y su propia política en seguridad y seguridad y salud en el trabajo.

Seguridad y salud en el trabajo: Disciplina que trata de la prevención de las lesiones y enfermedades causadas por las condiciones de trabajo, y de la protección y promoción de la salud de los trabajadores.
Busca mejorar las condiciones y el medio ambiente de trabajo, así como la salud en el trabajo, que conlleva la promoción y el mantenimiento del bienestar físico, mental y social de los trabajadores.

Valoración de los riesgos. Proceso de evaluar el(los) riesgo(s) que surge(n) de un(os) peligro(s), teniendo en cuenta la suficiencia de los controles existentes, y de decidir si el(los) riesgo(s) es (son) aceptable(s) o no.

2.2. Abreviaturas y guías

En este documento se encontrarán las siguientes abreviaturas:

SG-SST: Sistema de gestión de la seguridad y salud en el trabajo
SST: Seguridad y salud en el trabajo

Adicionalmente en el documento se encontrarán referencias a documentos que se encuentran insertados en el presente manual y que aparecerán con los siguientes íconos:

- Documento: Procedimiento, guía, manual, política, etc.
- Documento en Excel: programa, plan de trabajo, fichas, etc.

2.3. Marco legal

Es responsabilidad de **GESTIÓN RURAL Y URBANA S.A.S.** mantener los medios que brinden la seguridad a sus trabajadores, para lo cual el presente **SISTEMA DE GESTIÓN DE LA SEGURIDAD Y SALUD EN EL TRABAJO (SG-SST)** esta soportado en las siguientes disposiciones de ley del gobierno colombiano:

GRU SAS, dará estricto cumplimiento al contenido del presente documento los apartes ambientales y en seguridad y salud en el trabajo y la normativa vigente relacionada a continuación.

- **Decreto 1772 /1994.** Por el cual se reglamenta la afiliación y las cotizaciones al sistema general de riesgos profesionales.
- **Decreto 917/99**; Manual único de calificación de invalidez.
- **Decreto 768/2022**. Por el cual se actualiza la Tabla Clasificación actividades económicas para el Sistema General de Riesgos Laborales y se dictan otras disposiciones.
- **Decreto 1563/2016.** Por el cual se reglamenta la afiliación voluntaria al sistema general de riesgos laborales de los trabajadores independientes que devenguen uno (1) o más salarios mínimos legales mensuales vigentes (smlmv) así mismo se reglamenta el pago de aportes.
- **Decreto 2943 DE 2013.** "por el cual se modifica el parágrafo 1º del artículo 40 del Decreto 1406 de 1999" el empleador solo pagará los dos (2) primeros días de incapacidad originada por enfermedad general.
- **Resolución 4272 de diciembre de 2021**. Por la cual se Establece los requisitos mínimos de seguridad para el desarrollo de trabajos en alturas y lo concerniente con la capacitación y formación de los trabajadores y aprendices en los centros de entrenamiento de trabajo en alturas.
- **Decreto 1670/2007.** Por medio del cual se ajustan las fechas para el pago de aportes al Sistema de la Protección Social y para la obligatoriedad del uso de la Planilla Integrada de Autoliquidación de Aportes.
- **Resolución 2346/2007.** por la cual se regula la práctica de evaluaciones médicas ocupacionales y el manejo y contenido de las historias clínicas ocupacionales.
- **Resolución 2646/2008**. por la cual se establecen disposiciones y se definen responsabilidades para la identificación, evaluación, prevención, intervención y

monitoreo permanente de la exposición a factores de riesgo en el trabajo y para la determinación del origen de las patologías causadas por el estrés ocupacional.

- **Resolución 652 del 30 de Abril de 2012.** Por la cual se establece la conformación y funcionamiento del Comité de Convivencia Laboral en entidades públicas y empresas privadas y se dictan otras disposiciones.

- **Resolución 02413 de 1979**. Por la cual se dicta el Reglamento de Higiene y Seguridad para la Industria de la Construcción.

- **Resolución 1016 /89**. Reglamento para la organización y funcionamiento y forma de los programas de Seguridad y Salud en el Trabajo.

- **Resolución 2013/1986**. Por el cual se reglamenta la organización y funcionamiento de los comités de medicina, higiene y seguridad industrial en los lugares de trabajo.

- **Resolución 1792/1990.** Por la cual se adopta valores límites permisibles para la exposición ocupacional al ruido.

- **Resolución 1356 de 18 de julio de 2012**. Por la cual se modifica parcialmente la Resolución 652 de 2012.

- **Resolución 1918/2009.** Por la cual se modifican los artículos 11 y 17 de la Resolución 2346 de 2007 y se dictan otras disposiciones.

- **Resolución 1075/92**. Dispone el establecimiento de actividades en el Marco del Programa de Seguridad y Salud en el Trabajo, relacionados con el control de la farmacodependencia, alcoholismo y tabaquismo.

- **Resolución 3941 de 1994 del Ministerio de Trabajo.** Determina que la práctica de la prueba de embarazo como prerrequisito para que la mujer pueda acceder a un empleo u ocupación queda prohibida, excepto para aquellos empleadores de actividades catalogadas legalmente como de alto riesgo.

- **Resolución 2569/99**. Establece los criterios técnicos para la determinación del origen de las enfermedades y de los accidentes.

2.4. Responsabilidades

Responsabilidades del contratista Gestión Rural Y Urbana SAS:

- ✓ Disponer de herramientas tecnológicas necesarias para facilitar el desarrollo de las obligaciones SST, ambiental, maquinaria, vehículos y equipos.
- ✓ Elaborar e implementar los programas, procedimientos, planes y demás documentos y medidas ambientales, de seguridad y salud en el trabajo requeridos durante el contrato de acuerdo con las actividades a ejecutar.
- ✓ Garantizar durante el desarrollo del contrato la realización de inducción y capacitación para el personal vinculado al contrato.
- ✓ Tomar las medidas preventivas y correctivas en los procedimientos constructivos, para dar cumplimiento efectivo a las obligaciones establecidas en el SGSST.
- ✓ Cumplir con los procedimientos, formatos y registros requeridos para la ejecución de las actividades SST.
- ✓ Mantener los registros de suministro, control de uso y recambio de los elementos de protección personal para la totalidad de sus trabajadores de conformidad con la matriz, y garantizar que durante el desarrollo de la obra todo el personal use los elementos de protección de acuerdo con las actividades que se realicen.

Gerencia y/o Representante Legal:

- ✓ Disponer de los recursos necesarios para implementar el Sistema de Gestión de Seguridad y Salud en el Trabajo SG-SST, gestión ambiental y maquinaria, vehículos y equipos.
- ✓ Definir y promover la divulgación de la política de seguridad y salud en el trabajo.
- ✓ Notificar a las autoridades competentes los accidentes de trabajo y las enfermedades laborales que se presenten.
- ✓ Informar a los trabajadores sobre los riesgos a los cuales están expuestos, sus efectos y las medidas preventivas correspondientes.
- ✓ Asignar y comunicar las responsabilidades específicas en Seguridad y Salud en el Trabajo a todos los niveles de la empresa.
- ✓ Facilitar a los trabajadores la asistencia a cursos y programas educativos, que se realicen para la prevención y promoción de los riesgos laborales.

- ✓ Cotizar ante la Administradora de Riesgos laborales el valor de cotización, con el objeto de amparar las contingencias de accidente de trabajo y enfermedad laboral.
- ✓ Cumplir los requisitos normativos vigentes aplicables en materia de seguridad y salud en el trabajo para el sector y de acuerdo con la actividad a realizar.
- ✓ Promover la participación de todos los miembros de la empresa en la implementación del Sistema de Gestión de Seguridad y Salud en el trabajo SG-SST.
- ✓ Garantizar y promover el cumplimiento de SST por parte de subcontratistas vinculados al contrato.

Director de obra:

- ✓ Favorecer el control de la accidentalidad, morbilidad y el ausentismo laboral, así como liderar el control total de pérdidas sobre el medio ambiente, los materiales, la infraestructura física y tecnológica y sobre los clientes internos y externos.
- ✓ Servir como multiplicador en el conocimiento de los factores de riesgo, sus efectos, controles y protecciones y ser ejemplo en la aplicación de procedimientos y comportamientos seguros en el trabajo.
- ✓ Gestionar oportunamente los recursos necesarios para la implementación del SG-SST.
- ✓ Promover los hábitos, estilos de vida y de trabajo saludables, convirtiéndose en modelo sobre el auto cuidado y la seguridad basada en el comportamiento.
- ✓ Garantizar y promover el cumplimiento de SST por parte de subcontratistas vinculados al contrato.

Residente de Obra:

- ✓ Notificar de manera inmediata los accidentes de trabajo y enfermedades laborales que se presenten.
- ✓ Asistir a las actividades de capacitación que se realicen a los trabajadores.
- ✓ Facilitar el tiempo necesario para la capacitación del personal.
- ✓ Atender las observaciones generales del personal en cuanto a las condiciones inseguras que puedan generar posibles accidentes de trabajo y tomar las acciones correctivas y preventivas a que haya lugar.
- ✓ Atender las observaciones y solicitudes del Residente SST para el cumplimiento del Sistema de Gestión y Salud en el Trabajo.
- ✓ Participar en la investigación de los accidentes de trabajo que se presenten en el proyecto.
- ✓ Cumplir y hacer cumplir la política, normas y procedimientos establecidos en materia de Seguridad y Salud en el trabajo.

Residente de Seguridad y Salud en el Trabajo:

- ✓ Elaborar el sistema de gestión de seguridad y salud en el trabajo a implementar en el contrato.
- ✓ Entregar los soportes que se requieran para evidenciar el cumplimiento de los componentes SST, ambiental, maquinaria, vehículos y equipo en los plazos que se determinen.
- ✓ Diligenciar los formatos contenidos en el SG-SST y que puedan servir como herramienta de verificación en la labor de la Supervisores del Contrato, GRU SAS se compromete a permitir el acceso en todo momento a estos formatos y los soportes respectivos a la Supervisión del contrato.
- ✓ Identificar, valorar y priorizar los riesgos presentes en las actividades a ejecutar dentro del contrato.
- ✓ Determinar los controles necesarios para minimizar los riesgos de Accidente de Trabajo y Enfermedad Laboral.
- ✓ Implementar el plan de seguridad industrial en obra, de acuerdo con las instrucciones impartidas por el área de seguridad y salud en el trabajo de la empresa.
- ✓ Verificar la afiliación a la seguridad social de todo el personal que vaya a ingresar a la obra incluyendo la del personal de los subcontratistas. En caso de que el personal no cuente con la respectiva afiliación no se le permitirá el ingreso la obra.
- ✓ Brindar soporte al residente de obra en el tema de seguridad industrial.
- ✓ Realizar la coordinación con la ARL de la empresa para las diferentes actividades de promoción y prevención a través del área de seguridad y salud en el trabajo de la empresa.
- ✓ Reportar AT y llevar las correspondientes estadísticas, en caso de que se presenten.
- ✓ Indicar respecto de los elementos de protección personal requeridos para las actividades a desarrollar.
- ✓ Verificar la implementación del programa de protección contra caídas y realizar los ajustes a que haya lugar, de acuerdo con las condiciones y avance de la obra.
- ✓ Solicitar oportunamente los recursos necesarios para la implementación del Sistema de Gestión de Seguridad y Salud en el Trabajo.
- ✓ Verificar el cumplimiento de las normas de seguridad industrial en obra por parte de todo el personal contratistas y visitantes.
- ✓ Implementar y asegurar el cumplimiento de todas las actividades programadas y procedimientos plasmados en el SG-SST.
- ✓ Planear la implementación de un servicio oportuno y eficiente de atención de emergencias.
- ✓ Asistir a los comités de seguimiento ambiental, SST y demás reuniones a las que se le requiera por parte de la interventoría.
- ✓ Reportar la gestión SST en los comités técnicos.
- ✓ Ejecutar las actividades del programa de inducción, motivación y entrenamiento en SST para el personal vinculado al contrato de la obra (mano de obra calificada y no calificada) acorde con la identificación de riesgos.

- ✓ Revisar a diario bitácora, hacer anotaciones, firmar e implementar las acciones requeridas, en el desarrollo de las visitas y comités realizados.
- ✓ Verificar y solicitar a la interventoría la aprobación de los permisos de trabajo para actividades de alto riesgo.
- ✓ Se debe contar con brigadas de emergencias (primeros auxilios, contra incendio, evacuación y rescate) de tal forma que se pueda responder de forma inmediata frente a cualquier evento que se presente.
- ✓ Se debe medir la efectividad del plan de emergencias y contingencias propuesto mediante simulacros e inspecciones y realizar los ajustes necesarios.

Brigada de Orden, Aseo y Limpieza:

- ✓ Procurar el cuidado integral de su salud.
- ✓ Cumplir con las normas y reglamentos de Seguridad y Salud en el Trabajo de la empresa.
- ✓ Conservar en orden y aseo los lugares de trabajo, lugares comunes, las herramientas y los equipos.
- ✓ Usar en forma oportuna y adecuada los dispositivos de prevención de riesgos y los elementos de protección personal.
- ✓ Seguir procedimientos seguros para su protección, la de sus compañeros y la del proyecto en general.
- ✓ Informar toda condición peligrosa o prácticas inseguras al residente de Seguridad y Salud en el Trabajo y hacer sugerencias para prevenir o controlar los factores de riesgo.
- ✓ Tomar parte activa del Comité Paritario de Seguridad y Salud en el Trabajo, brigadas de emergencia, comisiones y programas de inspección que se asignen.

Comité Paritario de Seguridad Y Salud en el Trabajo y/o Vigía de seguridad:

- ✓ Participar en las actividades de promoción, divulgación e información del SG-SST.
- ✓ Actuar como instrumento de vigilancia para el cumplimiento del SG-SST.
- ✓ Emitir recomendaciones para el mejoramiento del SG-SST.
- ✓ Recibir copias de conclusiones y recomendaciones sobre inspecciones e investigaciones que realicen las autoridades de SST en los sitios de trabajo.
- ✓ Proponer a la administración de la empresa la adopción de medidas y desarrollo de actividades que procuren y mantengan la salud en los lugares y ambientes de trabajo.
- ✓ Proponer y participar en actividades de capacitación en SST dirigidas a trabajadores, supervisores y directivos de la empresa.
- ✓ Participar en el análisis de causas de los accidentes de trabajo y enfermedades laborales y proponer al empleador medidas correctivas a que haya lugar para evitar su ocurrencia.

- ✓ Participar en visitas de inspección a lugares y ambientes de trabajo e informar al empleador sobre los factores de riesgo y sugerir medidas correctivas y de control.
- ✓ Apoyar la identificación de peligros y evaluación de riesgos que se deriven de los cambios que puedan darse en la empresa y la adopción de las medidas de prevención y control antes de su implementación.
- ✓ Servir como organismo de coordinación entre empleador y trabajadores en la solución de problemas relacionados con SST.
- ✓ Elegir el secretario del comité.
- ✓ Mantener el archivo de actas de reunión y demás actividades que se desarrollen.
- ✓ Participar activamente en la revisión del programa de capacitación en SST una vez al año.
- ✓ Apoyar al empleador en la planificación de auditoría anual al cumplimiento del SG-SST.

Trabajadores (directos o contratistas):

- ✓ Procurar el cuidado integral de su salud.
- ✓ Suministrar información clara, veraz y completa sobre su estado de salud.
- ✓ Informarse sobre los factores de riesgo de su oficio y puesto de trabajo, los efectos derivados de la exposición y las medidas preventivas y de protección. Informar toda condición peligrosa y práctica insegura, recomendando medidas de prevención y control para los factores de riesgo.
- ✓ Participar activamente de las actividades de prevención y promoción en Riesgos Laborales fomentadas por la empresa.
- ✓ Cumplir las normas y reglamentos de seguridad y Salud en el trabajo, además de los procedimientos seguros de operación, para su protección, la de sus compañeros y los bienes de la empresa.
- ✓ Participar y contribuir al cumplimiento de los objetivos del Sistema de Gestión de la Seguridad y Salud en el Trabajo SG-SST.
- ✓ Participar activamente de la inducción inicial, capacitaciones charlas antes de los inicios de las actividades, pausas activas entre otras actividades.
- ✓ Darles el uso adecuado a los elementos de protección personal, portarlos durante toda la jornada de trabajo y guardarlos y mantenerlos aseados y limpios.
- ✓ Informar las condiciones, actos inseguros o condiciones de salud que puedan afectar el correcto desempeño de sus actividades.

2.6.3. Actividades generales que se realizan en los distintos frentes de trabajo.

Se tienen las siguientes actividades en los dos frentes de obra:

- Actividades preliminares: replanteo y desmonte
- Movimiento de tierras (cerramiento)
- Estructuras en concreto (cerramiento)
- Estructura metálica.
- Instalaciones eléctricas e iluminación.
- Cubierta.
- Pañetes.

- Carpintería metálica.
- Carpintería de aluminio.
- Dortación de baños, griferías y accesorios.
- Pinturas.
- Aseo general y retiro de escombros (RCD)

2.7. Distribución del Personal

Para ejecutar el objeto del contrato se dispondrá del siguiente personal:

Tabla N° 2. *Personal mínimo y promedio para la ejecución del contrato.*

CARGO	CANTIDAD
Representante Legal	1
Director de obra	1
Inspector SISOMA	2
Residente de Obra	2
Ingeniero Electricista	1
Ingeniero Estructural	1
Obreros o personal operativo	14

Nota: La cantidad de personal puede cambiar dependiendo de la necesidad en la ejecución de las Actividades

2.8. Horarios y turnos de trabajo

El horario de trabajo establecido será el siguiente: lunes a viernes de 7:00 a.m. A 12.00 m y de 1:00 P.M. A 4:30 P.M. 1 descanso de 15 minutos durante la jornada laboral de 9:00 a.m. a 9:15 a.m. Hora de almuerzo de 12:00 a 1:00 p.m. Sábados de 7:00 a.m. a 10:30 a.m. Sujeto a modificación de acuerdo con la dinámica de la obra.

2.9. Aspectos Jurídicos y Laborales

2.9.1. Reglamento Interno de Trabajo

Gestión Rural y Urbana SAS cuenta con un Reglamento Interno, el cual se encuentra en proceso de actualización en razón a las últimas disposiciones emitidas por el gobierno nacional.

2.9.2. Reglamento de Higiene y Seguridad Industrial

Se tiene elaborado el Reglamento de Higiene y Seguridad Industrial y se encuentra publicado en un lugar visible para los funcionarios y trabajadores de las diferentes obras.

Anexo 2. Reglamento de Higiene y seguridad Industrial.

2.9.3. Comité Paritario de Seguridad y Seguridad y Salud en el Trabajo

Gestión Rural y Urbana SAS cuenta con un Comité Paritario de Seguridad y Salud en el Trabajo, dando cumplimiento a la resolución 2013 de 1986 y el Decreto 1295 de 1994.

Mediante el Decreto 1443 del 2014, se modifica el nombre de Salud Ocupacional (COPASO) a comité de seguridad y salud en el trabajo (COPASST) implementado por el Sistema de Gestión de Seguridad y Salud en el Trabajo (SG-SST).

El comité paritario se reúne mensualmente durante la jornada laboral y desarrolla actividades de investigación, capacitación, inspección, vigilancia, coordinación participación y promoción en seguridad y salud en el trabajo participando de manera activa en el funcionamiento del sistema de gestión de la seguridad y salud en el trabajo.

A su vez para este contrato dependiendo la cantidad de trabajadores se conformarán el comité COPASST.

Dentro de las principales funciones y responsabilidades del COPASST, dando cumplimiento al artículo 11 de la resolución 2013 de 1989, artículo 26 del decreto 614 y el decreto 1295 de 1994, se encuentran:

- ✓ Proponer a la administración de la empresa o establecimiento de trabajo la adopción de medidas y el desarrollo de actividades que procuren y mantengan la salud en los lugares y ambientes de trabajo.
- ✓ Proponer y participar en actividades de capacitación en seguridad y salud en el trabajo dirigidas a trabajadores, supervisores y directivos de la empresa o establecimiento de trabajo.
- ✓ Colaborar con los funcionarios de entidades gubernamentales de seguridad y salud en el trabajo en las actividades que éstos adelanten en la empresa y recibir por derecho propio los informes correspondientes.
- ✓ Vigilar el desarrollo de las actividades que en materia de medicina, higiene y seguridad industrial debe realizar la empresa de acuerdo con el Reglamento de Higiene y Seguridad Industrial y las normas vigentes; promover su divulgación y observancia.
- ✓ Colaborar en el análisis de las causas de los accidentes de trabajo y enfermedades laborales y proponer al empleador las medidas correctivas que haya lugar para evitar su ocurrencia. Evaluar los programas que se hayan realizado.
- ✓ Visitar periódicamente los lugares de trabajo e inspeccionar los ambientes, máquinas, equipos, aparatos y las operaciones realizadas por el personal de trabajadores en cada área o sección de la empresa e informar al empleador sobre la existencia de factores de riesgo y sugerir las medidas correctivas y de control.

- ✓ Estudiar y considerar las sugerencias que presenten los trabajadores en materia de medicina, higiene y seguridad industrial.
- ✓ Servir como organismo de coordinación entre empleador y los trabajadores en la solución de los problemas relativos a la seguridad y salud en el trabajo. Tramitar los reclamos de los trabajadores relacionados con la seguridad y salud en el trabajo.

2.9.4. Comité de convivencia laboral

Gestión Rural y Urbana SAS cuenta con un comité de convivencia laboral dando cumplimiento a lo establecido en las resoluciones 652 y 1356 de 2012, creado como medida preventiva para el acoso laboral. Sesiona de manera trimestral o en casos que requieran intervención inmediata.

El comité de convivencia tiene las siguientes funciones:

- Realizar una reunión cada tres meses para hacer seguimiento a las solicitudes recibidas y temas tratados en cada reunión o para hacer seguimiento a los casos presentados en ese periodo de tiempo entre una reunión y otra.
- Realizar comités extraordinarios cuando haya lugar a realizarlos y la complejidad de la situación lo amerite.
- Recibir y dar trámite a las quejas presentadas en las que se describan situaciones que puedan constituir acoso laboral, así como las pruebas que las soportan.
- Examinar de manera confidencial los casos específicos o puntuales en los que se formule queja o reclamo, que pudieran tipificar conductas o circunstancias de acoso laboral, al interior de la entidad pública o empresa privada.
- Escuchar a las partes involucradas de manera individual sobre los hechos que dieron lugar a la queja.
- Adelantar reuniones con el fin de crear un espacio de diálogo entre las partes involucradas, promoviendo compromisos mutuos para llegar a una solución efectiva de las controversias.
- Formular planes de mejora y hacer seguimiento a los compromisos,
- Presentar a la alta dirección de la empresa las recomendaciones para el desarrollo efectivo de las medidas preventivas y correctivas del acoso laboral (si se presenta).

A continuación, se describen las acciones y procedimientos a seguir para evitar conductas de acoso laboral y así prevenir el riesgo psicolaboral:

- Divulgar el significado de acoso laboral en la obra y personal administrativo.

- Asegurar vías para resolver los conflictos de manera objetiva y democrática se establecerá con el comité de convivencia laboral.
- Establecer contactos independientes con los trabajadores.
- Investigar el alcance y naturaleza del problema.
- Implicar a los trabajadores y representantes en la prevención del acoso laboral.
- Divulgar continuamente los valores, normas de la organización, consecuencias y sanciones del incumplimiento de las normas.
- Indicar dónde y cómo pueden obtener ayuda las víctimas de acoso laboral.
- Garantizar el derecho a quejarse sin represalias.
- Mantener la confidencialidad.
- Escuchar a ambas partes de forma objetiva.

2.10. Comunicación

Gestión Rural y Urbana SAS ha establecido mecanismos de comunicación, participación y consulta de empleados y partes interesadas externas (proveedores, contratistas, clientes, comunidad, autoridad, entre otras) sobre los aspectos relevantes del SG-SST.

Adicionalmente las partes interesadas externas podrán comunicarse al correo del contrato gru.magangue.carmen.2024@gmail.com, las comunicaciones en medio físico que lleguen a las instalaciones de la empresa relacionadas con SG-SST del objeto de contrato serán recibidas por el área administrativa de Gestión Rural y Urbana SAS y tramitadas por el residente HSEQ con visto bueno del Director de obra, se asegura que las partes interesadas externas son consultadas acerca de asuntos relativos en seguridad y salud en el trabajo cuando sea apropiado.

Adicionalmente al ingreso a los frentes de trabajo o áreas de intervención se comunicará a todo visitante las recomendaciones de seguridad mínimas para la permanencia en dichos lugares.

Las solicitudes, inquietudes y sugerencias de los trabajadores de la empresa relacionadas con el tema se SG-SST deberán ser comunicadas al Comité de seguridad y salud en el trabajo, quien en sus reuniones mensuales las abordará como punto en la agenda.

Para la comunicación interna a trabajadores de aspectos relacionados con el SG-SST se podrán utilizar los siguientes mecanismos: cartelera SST, correos electrónicos, boletines, folletos, cartillas sobre temas relacionados con la SG-SST programa de inducción, capacitación y entrenamiento, entre otros.

2.11. Procedimiento para la afiliación y pago al SGSS y Parafiscales

El procedimiento para afiliación del personal al Sistema General de Seguridad Social será:

- Afiliación a EPS y Fondo de pensiones que tenga el trabajador.
- Afiliación a ARL COLMENA el día anterior al inicio de las actividades del trabajador en obra en riesgo V.
- Afiliación a la Caja de Compensación.

Para el personal de subcontratistas se realizará la respectiva verificación de sus afiliaciones al Sistema General de Seguridad Social antes de su ingreso a la obra y posteriormente los respectivos pagos mensuales.

No se permitirá realización de actividades de personal que no esté afiliado al Sistema General de Seguridad Social o que no cuente con los pagos respectivos, de acuerdo con los plazos establecidos por la ley.

Gestión Rural y Urbana S.A.S. realizará el pago de Seguridad Social de acuerdo con el plazo establecido por la ley según sus últimos dos números de Nit, que corresponde al 16 día hábil de cada mes.

3. PLANIFICACIÓN DEL SG-SST

Para la planificación del sistema se tienen en cuenta los siguientes aspectos que son fundamentales para el correcto desarrollo de los proyectos, los cuales son:

3.1. Evaluación Inicial o Autoevaluación del sistema de Gestión de la seguridad y salud en el trabajo SG-SST

La evaluación inicial se realiza con el fin de identificar las prioridades en seguridad y salud en el trabajo para establecer el plan de trabajo.

Permitirá mantener vigentes las prioridades en seguridad y salud en el trabajo acorde con los cambios en las condiciones y procesos de trabajo de la empresa y su entorno, y acorde con las modificaciones en la normatividad del Sistema General de Riesgos Laborales en Colombia.

La evaluación inicial debe incluir, entre otros, los siguientes aspectos:

1. La identificación de la normatividad vigente en materia de riesgos laborales incluyendo los estándares mínimos del Sistema de Garantía de Calidad del Sistema General de Riesgos Laborales.

2. En la identificación de peligros deberá contemplar los cambios de procesos, instalaciones, equipos, maquinarias, entre otros.

3. La identificación de las amenazas y evaluación de la vulnerabilidad de la obra a intervenir.

4. La evaluación de la efectividad de las medidas implementadas, para controlar los peligros, riesgos y amenazas, que incluya los reportes de los trabajadores.

5. El cumplimiento del programa de capacitación incluyendo la inducción y reinducción para los trabajadores.

Anexo 3. Ultima autoevaluación radicada ante el ministerio de trabajo.

3.2. Identificación de Peligros, Evaluación y valoración de riesgos y Control específicos.

Se presenta para esta obra la identificación de peligros, evaluación y valoración de los riesgos.

La identificación de peligros, evaluación y valoración de los riesgos será validada cuando se realice visita a la obra y se actualizará cuando se requiera teniendo en cuenta si se deben realizar actividades que no se contemplaron inicialmente y que generen riesgos diferentes a los ya valorados o en caso de accidente de trabajo grave o mortal o un evento catastrófico en la empresa. En la matriz van contemplados los controles a implementar que sean necesarios para minimizar los riesgos que afecten el libre desarrollo de las actividades de los trabajadores en obra.

La metodología utilizada para la identificación de peligros, evaluación y valoración de riesgos es la GTC 45.

Se permitirá la participación activa de los trabajadores y partes interesadas en la priorización de los riesgos a través de la validación de la matriz de peligros, se establecerá la metodología que permita identificar los peligros, evaluar y priorizar los riesgos que puedan afectar la Seguridad y Salud en el Trabajo; estableciendo los controles necesarios para la promoción de ambientes de trabajo seguros y saludables.

Al establecer los controles, y de acuerdo con la naturaleza de los peligros, la priorización realizada, se debe tener en cuenta la necesidad de utilizar metodologías adicionales para complementar la evaluación de los riesgos.

Anexo 4. Matriz de Identificación de peligros, evaluación y valoración de Riesgos.

3.3. Notificación de los Riegos

El proceso de notificación de riesgos para los puestos de trabajo que se van a tener en obra será llevado a cabo en el proceso de inducción inicial por parte del residente SST, para ello los formatos de notificación cuentan con la información suficiente para el reporte de los riesgos existentes, serán entregados a los trabajadores para que se familiaricen con el formato y así conozcan la exposición que van a tener. Los formatos serán firmados por el residente SST y al completarse la actividad son firmados por cada uno de los trabajadores que han sido objeto de la notificación, como constancia de que el trabajador lo ha recibido y está enterado de todo su contenido. Este tipo de actividad permite la interacción con el trabajador para lograr un mejor entendimiento de todo lo reflejado en los formatos de notificación y les permitirá aclarar cualquier duda que tengan sobre la información allí presentada.

Anexo 5. Formato de Notificación de Riesgos.

3.4. Objetivos

3.4.1. Objetivo General

Establecer la planeación, organización, ejecución, evaluación, seguimiento y mejora continua de acciones de seguridad y salud en el trabajo de la población trabajadora del Objeto de Contrato **“**ADECUACIÓN DE LA OFICINA LOCAL ICA MAGANGUÉ Y MANTENIMIENTO DE LA OFICINA LOCAL ICA EN CARMEN DE BOLIVAR, DEPARTAMENTO DE BOLÍVAR**”** bajo el cumplimiento de la política de Seguridad y Salud en el Trabajo definida por Gestión Rural y Urbana S.A.S.

3.4.2. Objetivos específicos

- Cumplir los requerimientos en materia SST y ambiental.
- Desarrollar actividades de prevención de enfermedades laborales y accidentes de trabajo.

- Evaluar en forma cualitativa y cuantitativa la magnitud de los factores de riesgo presentes en la obra, para determinar su real peligrosidad.
- Analizar e implementar los sistemas de control requeridos de acuerdo con los riesgos existentes.
- Dar cumplimiento a las disposiciones legales vigentes en materia de Salud y Seguridad en el Trabajo, siendo este un elemento primordial requerido para el buen funcionamiento del contrato.

3.5. Alcance

El presente Sistema de Gestión de Seguridad y Salud en el Trabajo, aplica a todo el personal vinculado al proyecto contratistas, subcontratistas, visitantes, personal de obra. Sus disposiciones son de total aplicación y obligatorio cumplimiento, con el fin de preservar y mantener la salud física y mental, prevenir accidentes y enfermedades laborales, así como para promover las condiciones de higiene y bienestar de los trabajadores en sus diferentes actividades.

3.6. Seguimiento y control del SG-SST. Indicadores

EL SISTEMA DE GESTIÓN DE LA SEGURIDAD Y SALUD EN EL TRABAJO (SG-SST) será evaluado con la periodicidad establecida en la empresa para determinar el grado de efectividad o impacto que las acciones han tenido sobre las condiciones de trabajo y salud de la comunidad laboral.

Para el análisis de los resultados del SISTEMA DE GESTIÓN DE LA SEGURIDAD Y SALUD EN EL TRABAJO (SG - SST)

Anexo 6. Indicadores de evaluar SG-SST GRU SAS.

3.7. Cronograma de actividades para el Proyecto.

Se realiza el plan de trabajo y plan de capacitación de acuerdo con el tiempo estipulado para ejecución de obra. En él se encuentran las actividades contempladas para el correcto desarrollo de la obra cumpliendo con lo establecido en el presente sistema de gestión de seguridad y salud en el trabajo SG-SST.

Anexo 7. Cronograma de actividades y plan de capacitación para el Proyecto.

3.8. Definición de recursos

Gestión Rural y Urbana SAS, desde el área directiva define y asigna los recursos físicos, financieros y humanos para el diseño, desarrollo, supervisión y evaluación de las medidas de prevención y control, para la gestión eficaz de los peligros y riesgos en el lugar de trabajo de las diferente obras y también para que los responsables de la implementación de los SG-SST en las diferentes sedes de trabajo puedan cumplir de manera satisfactoria con sus funciones.

Gestión Rural y Urbana SAS asigna los recursos para establecer, implementar, mantener y mejorar el sistema de gestión de Seguridad y Salud en el Trabajo en términos de la infraestructura organizacional y los recursos tecnológicos. Anualmente se designa el presupuesto que será aprobado por la alta gerencia y se evalúa su cumplimiento.

- **Recursos humanos**

Para el contrato, se dispone de 2 inspectores SST de GRU S.A.S. con licencia en seguridad y salud en el trabajo quienes son los responsables de la implementación del SG- SST.

Se cuenta con el responsable del SG-SST de GRU SAS, que da las directrices y genera el cumplimiento establecido en el SG-SST con el fin de promover y proteger la integridad física y mental de todo el personal vinculado a la empresa; así mismo, se cuenta con personal de la ARL Colmena disponible de acuerdo con la coordinación de actividades de promoción y prevención de riesgos requeridas para en el contrato.

Igualmente, se cuenta con la participación de la alta Dirección y los responsables de rendición de cuentas en SST de acuerdo con lo estipulado en el SG-SST de Gestión Rural y Urbana S.A.S., que para este caso son los cargos de Director de Obra y Residente de Obra.

- **Recursos físicos**

El área destinada para administración del Sistema de Gestión cuenta con la dotación de oficina, (Teléfonos, impresoras, escritorios, sillas, archivos equipos de cómputo necesarios).

- **Recursos técnicos**

Los requeridos de acuerdo con las actividades, los cuales la empresa gestionará con la ARL Colmena, en caso de que éstos sean necesarios.

- **Recursos financieros**

Los necesarios para la implementación y realización de las actividades que involucra este SG-SST en la obra. En éstos se involucra los costos necesarios para:

- Compra de elementos de protección personal acorde a las actividades a ejecutar y elementos de protección contra caídas.
- Compra de elementos de señalización y demarcación.
- Compra de elementos de atención de emergencias.
- Pago de responsable de SST para la obra.
- Compra de materiales necesarios para elaboración y distribución de herramientas escritas de sensibilización y capacitación al personal.

4. APLICACIÓN SG-SST

Para la implementación de los programas de gestión de los peligros y riesgos GESTION RURAL Y URBANA S.A.S adopta los métodos para la identificación, prevención, evaluación, valoración y control de los peligros y riesgos con los siguientes parámetros.

Se establecerán medidas de intervención con el siguiente esquema de jerarquización:

- Eliminación del peligro/riesgo: Rediseño de procesos o equipos para eliminar o reducir los riesgos.
- Sustitución: Sustituir una materia prima por una menos peligrosa o también, sustituir un proceso de alto riesgo por uno de menor riesgo.
- Controles de Ingeniería: Adopción de medidas técnicas para el control del peligro/riesgo en su origen o fuente, como la implementación de sistemas de ventilación o encerramiento de equipos. Igualmente, incluye los controles para reducir la energía (reducir la fuerza, la presión, la temperatura entre otros) de los sistemas de producción, cuyo fin esté asociado con el control de los riesgos en SST.
- Controles Administrativos: Implementación de sistemas de señalización, advertencia, demarcación de zonas de riesgo o zonas de circulación y almacenamiento, implementación de sistemas de advertencia y alarma, diseño e implementación de procedimientos de seguridad para ciertos procesos o actividades de riesgo, controles de acceso a zonas de riesgo, inspecciones de seguridad, listas de chequeo, permisos de trabajo entre otros.
- Equipos de Protección Personal: Cuando ciertos peligros/riesgos no se puedan controlar en su totalidad con las medidas anteriores, el empleador suministra a sus trabajadores la dotación pertinente de acuerdo con sus actividades.

El residente SST, el residente técnico de obra, trabajadores de obra y subcontratistas, corregirán las condiciones inseguras que se presenten en el lugar de trabajo, de acuerdo con las condiciones específicas y riesgos asociados a la tarea.

4.1. Procedimiento trabajo de alto riesgo

De acuerdo con la identificación de peligros, evaluación y valoración de riesgos, los trabajos de alto riesgo son los siguientes:

- Trabajo en alturas.
- Trabajos en caliente - soldadura.
- Riesgo eléctrico.

Anexo 8. Procedimientos para trabajo de alto Riesgo.

4.2. Proceso (Maquinarias, Equipos, Sistemas) Materiales e Insumos

A continuación, se describen los principales herramientas y recursos a utilizar en temas SST para las actividades o etapas constructivas descritas en el numeral 2.6.3 de este documento:

Maquinaria y Equipos

- Pulidoras
- Equipos soldador
- Herramientas menores Manuales (pala, carreta, pica, cincel entre otros)
- Volquetas, para la disposición final de escombros y material de arrastre
- Mezcladora de concreto.
- Vibrador.
- Andamios
- Taladros
- Compresor.
- Rana.
- Cortadora de baldosa
- Escaleras
- Soplete – cilindro de gas.
- Andamios.
- Otras de acuerdo a necesidad de las actividades a ejecutar.

Para el área administrativa:

- Computadoras personales de oficina y portátiles, impresoras y equipos de oficina, equipos de comunicación (celulares, servicio de internet).

4.3. Evaluaciones Medicas Ocupacionales o Exámenes Ocupacionales.

Se realizarán los exámenes medico ocupacionales de preingreso y de retiro a través de la IPS que el subcontratista use y que cuenten con licencia en salud ocupacional.

Los exámenes médicos ocupacionales periódicos se realizarán de acuerdo con la periodicidad establecida en el SG-SST de GRU S.A.S, que es anual. Para este contrato se realizarán a las personas que de acuerdo con esa periodicidad apliquen.

GESTION RURAL Y URBANA S.A.S desarrollará acciones de vigilancia de la salud de los trabajadores mediante las evaluaciones médicas de ingreso y de retiro y los programas de vigilancia epidemiológica, con el propósito de identificar precozmente efectos hacia la salud derivados de los ambientes de trabajo y evaluar la eficacia de las medidas de prevención y control.

Se realizarán los exámenes ocupacionales, de acuerdo a lo indicado en el profesiograma de la empresa.

Con el diagnostico de condiciones y el resultado de los exámenes ocupacionales se va a realizar una línea base con el fin de determinar qué actividades se van a desarrollar derivadas de ellos.

Anexo 9. Procedimiento Exámenes médicos Ocupacionales.

4.4. Plan de emergencia y contingencias (Prevención, Preparación y Respuesta ante emergencias)

GESTION RURAL Y URBANA S.A.S cuenta con Plan de emergencia para su empresa, con cobertura a todos los trabajadores, independiente de su forma de contratación o vinculación, incluidos contratistas y subcontratistas, así como proveedores y visitantes, se crearán las brigadas de emergencias y se capacitarán para que estén preparados para poder ser primeros respondientes en caso de una eventual emergencia.

Para su efecto y para el objeto de este contrato, se determinará la necesidad de señalización y rutas de evacuación temporales y a su vez se acogerá a los planes de prevención, preparación y respuestas ante emergencias de las instalaciones de la Policía Nacional, donde se realicen las obras.
Todo evento o situación de emergencia que pueda presentarse requiere de unos procedimientos de manejo y control que se salen de los normalmente establecidos. Estos procedimientos requerirán, además de la utilización de unos recursos internos y externos, la disponibilidad de herramientas y métodos que posibiliten no solo respuestas

oportunas y eficaces, sino también una recuperación operacional en el menor tiempo posible.

Para toda emergencia, una vez presentada, es necesaria una respuesta oportuna utilizando los recursos humanos y técnicos en forma suficiente y adecuada al tamaño de la organización, con el fin de minimizar los daños, pérdidas, lesiones o muertes, asegurando así la sobrevivencia del personal.

La base de la respuesta a una emergencia se establece a través de una herramienta institucional de planificación, que permita diseñar de una manera uniforme y racional, una estructura de respuesta a los siniestros en forma de “Plan de respuesta a emergencias”.

Por esto, la planeación y programación para poder responder a las situaciones de emergencia que se generen, se basará en la probabilidad de que estos eventos puedan presentarse y la potencialidad de sus consecuencias. La posibilidad de éxito del manejo y control de la emergencia, dependerá principalmente de que éstos sean adecuados a la magnitud del evento.

Este plan de emergencias presenta los procedimientos de acción en caso en que se presente cualquier eventualidad que pueda poner en riesgo las personas vinculadas a la obra.

Se aclara que se presentan lineamientos generales del plan de emergencias; sin embargo y teniendo en cuenta que las obras se ejecutarán al interior de la Entidad, se presenta el plan de evacuación y el personal se deberá acoger al plan de emergencias establecido en las instalaciones de la Entidad en cada frente de obra.

OBJETIVOS:

Objetivo General:

Establecer un plan específico a cumplir por parte del personal del contrato, para enfrentar cualquier evento que genere emergencia en la obra.

Objetivos Específicos:

- Preparar y concientizar al personal sobre la importancia que representa el estar preparados para actuar en caso de emergencia.

- Establecer rutas y procedimientos de evacuación que permitan el desplazamiento a un sitio establecido previamente como seguro de los empleados y/o visitantes.

ALCANCE Y COBERTURA:

El Plan de evacuación permite aplicar procedimientos sencillos, que con entrenamiento periódico propician un grado alto de seguridad durante el suceso de una emergencia en la obra, ya que los parámetros aquí expuestos serán de conocimiento de todo el personal vinculado al contrato.

Recurso Técnico:

Se tiene la disponibilidad, para la ejecución de actividades relacionadas con el Plan de Emergencias, los implementos relacionados a continuación para el buen funcionamiento del mismo:

Sistema de Alarma: Será necesario que el personal se acoja al sistema de alarma de la Entidad.

Punto de Encuentro: Está pendiente por definir y se identificará con el personal en el momento de inicio de las actividades en obra, o se acogerá el que tenga la entidad.

Apoyo para control de incendios: Se contará en la obra con un extintor como apoyo para el control de conatos de incendio que se puedan presentar en la obra.

Apoyo para Primeros Auxilios: Se tendrá en obra un botiquín móvil y una camilla para atender eventos a nivel de primeros auxilios, los cuales estarán a cargo de los brigadistas.

Rutas de evacuación: Se señalizará en obra las respectivas rutas de evacuación, que indiquen a los trabajadores las zonas definidas y seguras para evacuar o se seguirá la señalización que se tenga en cada instalación de la Policía a intervenir.

Comunicaciones: Se publicará en lugar visible los teléfonos de apoyo de entidades externas. De otro lado, el profesional SST deberá contar con el listado de personal y los datos básicos dentro de los cuales debe estar el nombre de un familiar y teléfono para dar aviso en caso de una emergencia.

Requisitos para lograr la efectividad del plan de emergencias:

Para que este plan pueda cumplir con sus objetivos, se tendrá en cuenta:

- Se difundirá para que sea conocido por todos los trabajadores y visitantes ocasionales.
- Se deben realizar prácticas periódicas que permitan corregir los posibles errores y ayuden a mecanizar los procedimientos y descubrir nuevas estrategias.
- Todo el personal debe apoyar el plan comprometiéndose en su cumplimiento.
- Debe existir un brigadista de evacuación, con su suplente.

- Determinación de rutas de evacuación.
- Socialización de procedimientos a seguir en caso que se presenten eventos como: sismo, incendios, atentados, robos o atracos. Igualmente socializar el procedimiento para evacuar en caso que así se requiera.

Organización y conformación de la brigada:

Se conformará la Brigada de acuerdo al número de trabajadores que se tengan en obra y deberá funcionar desarrollando las siguientes actividades:

- Evacuación.
- Primeros Auxilios.
- Control de Incendios.

En situaciones de emergencia, los brigadistas deberán realizar acciones de acuerdo a las necesidades, por eso se estima que todos los brigadistas deben estar en la capacidad de responder a cualquier situación capacitados en Incendios, primeros Auxilios y evacuación, quienes poseen un conocimiento más específico en cada área en caso de actuar ante una emergencia.

Se organizará la brigada de emergencias con el personal vinculado al contrato, la cual recibirá la capacitación necesaria para poder dar respuesta ante una eventualidad.

Funciones de la brigada:

Brigada de emergencia:

Encargada de identificar la emergencia, prestar los servicios de primeros auxilios, control de conatos de incendios, coordinar la evacuación de las instalaciones si es necesario e inspección de las condiciones del lugar, esto teniendo en cuenta la clase y magnitud del evento que se presente.

Coordinador de la brigada de emergencia:

Es la máxima autoridad para preparar y llevar a cabo el evento, sus funciones son:

- Identificar en qué lugar exacto se presentó la emergencia, para lo cual se comunicará con el brigadista de comunicaciones.
- Dirigirse al sitio para evaluar la situación y coordinar con quien controla el fluido eléctrico y la necesidad de evacuar.
- Coordinar actividades con los brigadistas de comunicaciones, evacuación, primeros auxilios e incendios.
- Dar la orden de llamar a los organismos de socorro.

- Coordinar las actividades de los brigadistas.
- Determinar que la emergencia no corresponda a una falsa alarma.
- Autorizar el ingreso de personal de apoyo.
- Dar si es posible, la orden de reingreso a las instalaciones.

Brigadista de evacuación:

- Velar por el traslado del personal desde el sitio de peligro hasta el punto de encuentro considerado como seguro.
- Verificar que no quede ninguna persona en el sitio evacuado y observar condiciones generales de la estructura.
- Una vez en el sitio de reunión, realizar un conteo y reportarse al Coordinador de emergencias.
- Permanecer en el sitio seguro esperando nuevas instrucciones.
- Informar al Coordinador de Brigada sobre el número de personas que evacuaron, número de personas lesionadas.
- La persona que se encuentre atendiendo un visitante, se convertirá en su coordinador de evacuación y velará por su seguridad hasta llegar al punto de encuentro.

Brigadista de primeros auxilios:

- Encargado de brindar la primera atención médica al personal lesionado.
- Verificar condiciones locativas para prestar los primeros auxilios.
- Tener disponible el equipo de primeros auxilios y ubicado en los lugares estratégicos previamente elegidos.
- Estabilizar al personal afectado pos- trauma y prepararlo para el transporte.
- Brindar información al personal de apoyo externo sobre el estado de las víctimas y sus condiciones.
- Adoptar las medidas correctivas necesarias para mejorar la capacidad de respuesta, teniendo como base la evaluación realizada

Brigadista de incendios:

- Capacitarse en control manejo y combate de fuego.
- Inspeccionar las instalaciones eléctricas para determinar el desgaste de las mismas.
- Realizar inspección a los equipos de protección contra incendios.
- Establecer los planes de ayuda mutua con las empresas vecinas.
- Identificar la ubicación de los hidrantes más cercanos.

- Realizar práctica en el uso de los extintores cada vez que estos estén próximos a vencerse.

Brigadista de comunicaciones:

- Llevar el listado actualizado del personal que pertenece a la empresa, indicando información consignada en el respectivo formato establecido.
- Dar aviso a los diferentes cuerpos de socorro y coordinar la comunicación con los mismos, cuando sea autorizado por el Coordinador de la Brigada.
- Informar el sitio a donde son trasladadas las personas lesionadas en caso de una eventual emergencia.

Procedimiento de reporte en caso de accidentes de trabajo

La prevención de accidentes de trabajo y enfermedad laboral (ATEL) estará basada en la implementación de los controles definidos en la identificación de peligros, evaluación y valoración de los riesgos que se presenta con este SG-SST.

La atención y manejo del personal directo, que resulte lesionado por causa del trabajo será cubierta por la ARL COLMENA SEGUROS, siguiendo el procedimiento que se menciona a continuación, establecido por GESTIÓN RURAL Y URBANA S.A.S:

- El trabajador lesionado deberá informar de manera inmediata al Residente SST sobre la ocurrencia del evento.
- El Residente SST se comunicará con la línea efectiva de la ARL Colmena al número (601) 4010447 para dar aviso telefónico del evento y de manera paralela deberá informar telefónicamente a Desarrollo Organizacional de Gestión Rural y Urbana S.A.S. para realizar el correspondiente reporte del AT (FURAT) a través de internet. **El aviso del AT se debe realizar inmediatamente sucede** para evitar inconvenientes de atención médica al trabajador.
- El Residente SST deberá seguir las instrucciones que le indique la ARL vía telefónica, en lo relacionado con la atención médica del trabajador. De ser necesario, se deberá acompañar al lesionado al centro de atención que indique la ARL, o ubicar un familiar del trabajador que se encargue del acompañamiento necesario.
- Posteriormente, se realizará la correspondiente investigación del AT, para lo cual la empresa utilizará el formato establecido. Esta investigación estará a cargo del responsable de seguridad y salud en el trabajo, jefe inmediato, testigos e integrantes del COPASST para determinar las causas (básicas e inmediatas) que generaron el AT.

- Se determinarán e implementarán las medidas de control o intervención de acuerdo con la investigación, teniendo en cuenta fechas y responsables para realizar seguimiento y así evitar que se vuelva a presentar el evento.

Para el personal vinculado a través de contratistas, se realizará el seguimiento respectivo al reporte del AT ante la ARL correspondiente, investigación del mismo y toma de acciones respectivas.

Listado teléfonos emergencia grupos de apoyo externos

A continuación, se presentan los números telefónicos de los grupos de apoyo externos cercanos, en caso de presentarse una eventual emergencia o que se requiera algún tipo de información, los cuales estarán publicados en un lugar visible en la obra:

Anexo 10. Procedimientos operativos normalizados (PONS)

4.5. Elementos de Protección Personal – EPP

Para la realización de las actividades establecidas para el contrato se entregará a los trabajadores los siguientes EPP:

Casco de seguridad, gafas de seguridad, protección respiratoria, guantes, protección auditiva de inserción o copa, overol de dos piezas, botas de seguridad y/o caucho con puntera de acero según la necesidad.

Para realizar el trabajo en alturas, se utilizarán los elementos de protección contra caídas como:

Casco con barbuquejo, gafas de seguridad, arnés de cuerpo entero de cuatro argollas, eslinga de posicionamiento y una línea de vida o un punto de anclaje seguro que garantice la seguridad del trabajador, según la tarea a realizar.

Se realizará la entrega y reposición de EPP cuando se evidencie su deterioro, siguiendo el procedimiento:

- De acuerdo con la identificación de peligros y la matriz de EPP, se realizará la entrega inicial de EPP y EPC a cada trabajador dejando el registro respectivo de entrega.
- Se dará instrucción a los trabajadores sobre el adecuado uso, almacenamiento e higiene de los EPP y EPC, dejando el registro respectivo.
- De acuerdo con el seguimiento realizado a través de las inspecciones de EPP y EPC, se verificará la necesidad de realizar reposición de los elementos que así lo ameriten.
- Se realizará reposición de los mismos registrando la entrega en el formato establecido, siendo necesario que el trabajador entregue los EPP deteriorados para evitar su uso prolongado en obra.

GESTION RURAL Y URBANA S.A.S se compromete a suministrar los equipos y elementos de protección personal (EPP) para el correcto desarrollo de sus actividades e implementar las acciones necesarias para que sean utilizados y almacenados por los trabajadores de la forma correcta.

Anexo 11. Matriz EPP y formato de entrega y reposición de EPP.

4.6. Inspección de seguridad

Se realizarán inspecciones de seguridad de acuerdo con el programa de inspecciones de GRU S.A.S., así:

- Inspección general de obra: Mensual
- Inspección de orden y aseo: Mensual.
- Inspección EPP y EPCC: Antes de cada uso y documentada 1 vez al mes.
- Inspección herramienta manual: Antes de cada uso y documentada 1 vez al mes.
- Inspección preoperacional de herramientas y equipos que se utilicen en obra.
- Inspección andamios: Con el armado y antes del ascenso del trabajador.
- Inspección escalera de mano: Antes de su uso, documentada una al mes.
- Inspección extintor, camilla y botiquín: Una vez al mes.

Anexo 12. Formatos de inspecciones.

4.7. Medidas de control para ingreso de personal, vehículos y maquinaria

Para el ingreso de personal, vehículos y maquinaria al proyecto, se deberá presentar la siguiente documentación al responsable del área SST en obra:

a. Ingreso de personal, conductores y operadores de equipos:

- Afiliaciones a seguridad social ARL (Riesgo V), EPS, AFP no mayor a un mes o planilla de pago de seguridad social del mes de ingreso.
- Cédula de ciudadanía legible.
- Examen médico de ingreso no mayor a un año.
- Examen médico de ingreso con énfasis en alturas para el personal que va a realizar trabajos a 2 m. o más.
- Curso de trabajador autorizado en alturas (Para personal que realizará tareas a 2 m. o más.
- Licencia de conducción vigente y acorde al vehículo a conducir (Para conductores)
- Certificado de idoneidad (Para operadores de maquinaria y/o equipos).
- Formación como operador de izaje (Para operadores de izaje).

b. Ingreso de vehículos:

- SOAT
- Revisión técnico mecánica y de gases.
- Tarjeta de propiedad del vehículo.

c. Maquinaria y/o equipos:

- Documentos de importación.
- Registro del último mantenimiento realizado a la máquina o equipo.
- Ficha técnica.
- Tarjeta de propiedad.

Dentro de las medidas de seguridad establecidas en el uso y manipulación de herramienta y equipos se contemplan:

- Verificación documentación del personal.
- Realizar inspección periódica de equipos o pre operacionales: el objeto es verificar el estado actual, ubicación y estado de guardas, etc y necesidades de mantenimiento o reparación.
- Verificación de último mantenimiento realizado.
- Verificación de documentación de la maquinaria.
- Entrega de Elementos de protección personal y verificación de uso.
- Realizar capacitación en uso de EPP.
- Realizar capacitación en manejo seguro de herramienta manual, mecanizada y equipos, divulgando normas de seguridad aplicables para la operación.
- Identificación de actividades y actos inseguros.
- Señalización del área donde se realice la operación (tareas críticas).
- Inducciones al personal de la empresa y subcontratistas.

4.8. Permiso Para trabajo seguro

En la obra se realizarán actividades de trabajo en alturas, soldadura y riesgo eléctrico, para lo cual se deberá diligenciar el permiso correspondiente. Este permiso deberá ser diligenciado por el Residente SST en conjunto con el trabajador que realizará la labor, evaluando los riesgos que se puedan presentar y las medidas de prevención a tener en cuenta; permitirá determinar la existencia y estado de elementos de protección personal y de elementos de protección contra caídas y las condiciones del entorno y del trabajador para realizar la labor.

Así mismo, para tareas críticas se deberá diligenciar el Análisis de Trabajo Seguro que permitirá identificar los riesgos y mecanismos de control de estos para evitar lesiones al personal durante su realización.

Anexo 13. Formatos de permiso de trabajo y ATS

4.9. Señalización

GESTION RURAL Y URBANA S.A.S, realiza una adecuada planificación y demarcación de áreas en todas las áreas, obras y proyectos de la empresa, incluyendo puestos de trabajo, áreas de almacenamiento, circulación, ubicación de máquinas y equipo contra incendio; junto con un programa para su mantenimiento. Se determinan normativos para que la demarcación sea respetada y esta responsabilidad está a cargo del Profesional SST y Residentes de obra.

Señalización frentes de obra y sitios temporales:

- Buen estado de la señalización que se encuentra instalada.
- Señalización vial en la zona, cuando se requiera.
- Se debe encontrar demarcadas las zonas de riesgos con cinta de peligro.
- Se debe tener señalización ambiental.
- Utilizar señales informativas en cuanto al uso de los elementos de protección personal y según sea la necesidad para prohibir, informar o prever un riesgo o un aspecto ambiental.
- Mantenimiento de la señalización y demarcación: Limpieza, reparación y/o sustitución y supervisión de su aplicación.

4.10. Programa de saneamiento básico industrial

Para los servicios sanitarios de uso de los trabajadores, se utilizarán las baterías sanitarias de las 2 instalaciones donde se ejecutarán las obras.

4.11. Programa de orden y aseo

Se implementará el programa de orden y aseo de las 5”s”, con los siguientes objetivos:

- Mejorar el ambiente de trabajo, con la eliminación de espacios que generen desorden, falta de aseo, fugas, contaminación, etc.
- Incentivar al personal con el cuidado del sitio de trabajo e incremento de la motivación laboral.
- Facilitar las condiciones para aumentar la vida útil de los equipos y elementos de trabajo.
- Realizar un correcto almacenamiento y disposición de materiales y desperdicios incluye el control de escapes, derrames o goteras.
- Reducir o mantener los bajos índices de accidentalidad.

Como medio de verificación y evidencia se evaluará a través de las listas de inspección, que se implementarán 1 vez al mes.

De acuerdo con los hallazgos encontrados en las inspecciones, se tomarán las acciones correctivas, preventivas o de mejora a que haya lugar, minimizando los riesgos de accidentalidad y reforzando en los trabajadores la cultura del programa.

4.12. Manejo de campamentos, materiales almacenados y sustancias químicas

Se utilizará un área dentro de las instalaciones a intervenir, autorizada por la Entidad para el almacenamiento de algunos materiales que se requieran en cada frente de obra.

Igualmente, se dispondrá de un espacio para que los trabajadores se cambien y guarden sus pertenencias.

Los materiales para almacenar en obra son: Arena, gravilla, cemento, estructura metálica, tubería sanitaria en PVC, tubería presión PVC, tubería eléctrica en PVC y emt, cables eléctricos, accesorios eléctricos, tejas metálicas, accesorios en acero inoxidable, vidrios, espejos, aparatos sanitarios y estructura para cielo rasos.

La disposición de los materiales en los sitios de almacenamiento se realizará de tal manera que no se vaya a generar accidentes de trabajo por apilamiento inadecuado y/o por riesgo químico.

El manejo de las sustancias químicas a utilizar se realizará teniendo en cuenta las directrices dadas en las hojas de seguridad de los materiales a utilizar y/o a almacenar.

Se realizarán cerramientos exclusivamente en el frente de obra de Carmen de Bolívar con polisombra h:2:00 mts, por separación de las instalaciones en comodato.

4.13. Gestión del cambio

GESTION RURAL Y URBANA S.A.S implementa un procedimiento para evaluar el impacto sobre la seguridad y salud en el trabajo que puedan generar los cambios internos (introducción de nuevos procesos, cambio en los métodos de trabajo, cambios en instalaciones, entre otros) o los cambios externos (cambios en la legislación, evolución del conocimiento en seguridad y salud en el trabajo, entre otros).

Para ello se realizará la identificación de peligros y la evaluación de riesgos que puedan derivarse de estos cambios y se adoptarán las medidas de prevención y control antes de su implementación, con el apoyo del Comité Paritario de Seguridad y Salud en el Trabajo. De la misma manera, se actualizará el plan de trabajo en seguridad y salud.

En el caso que se presenten cambios internos, el residente SST, debe informar y capacitar a los trabajadores relacionados con estas modificaciones.

Anexo 14. Procedimiento y gestión del cambio y Formato.

4.14. Contratación

Para GESTION RURAL Y URBANA S.A.S es importante que los trabajadores que estén vinculados con el proyecto garanticen el cumplimiento de las normas de seguridad y salud en el trabajo, por parte de los proveedores, trabajadores dependientes, contratistas y sus trabajadores o subcontratistas, durante el desempeño de las actividades objeto del contrato.

Para este propósito, en GESTION RURAL Y URBANA S.A.S se tienen en cuenta los siguientes aspectos:

- Se tienen incluidos los aspectos de seguridad y salud en el trabajo en la selección y evaluación de proveedores y contratistas.
- Se dispone de canales de comunicación para la gestión de seguridad y salud en el trabajo con los proveedores, trabajadores en misión, contratistas y sus trabajadores o subcontratistas a través del correo electrónico gru.magangue.carmen.2024@gmail.com
- Se verifica antes del inicio del trabajo y periódicamente, el cumplimiento de la obligación de afiliación al Sistema General de Riesgos Laborales, considerando la rotación del personal por parte de los proveedores contratistas y subcontratistas, de conformidad con la normatividad vigente.
- Se informa a los proveedores y contratistas al igual que a los trabajadores de este último, previo al inicio del contrato, los peligros y riesgos generales y específicos de su zona de trabajo incluidas las actividades o tareas de alto riesgo, rutinarias y no rutinarias, así como la forma de controlarlos y las medidas de prevención y atención de emergencias.
- Se instruye a los proveedores, trabajadores cooperados, trabajadores en misión, contratistas y sus trabajadores o subcontratistas, sobre el deber de informarle, acerca de los presuntos accidentes de trabajo y enfermedades laborales ocurridos durante el periodo de vigencia del contrato para que el empleador o contratante ejerza las acciones de prevención y control que estén bajo su responsabilidad.
- Se verifica periódicamente y durante el desarrollo de las actividades objeto del contrato, el cumplimiento de la normatividad en seguridad y salud el trabajo por parte de los proveedores, contratistas y sus trabajadores o subcontratistas.

Para información de los contratistas de GESTION RURAL Y URBANA S.A.S, se tiene establecido un Manual de SST para contratistas y proveedores, el cual aplica también para este contrato.

4.15. Procedimiento de Inducción de personal

Cuando un trabajador ingresa a laborar en GESTION RURAL Y URBANA S.A.S recibe una inducción completa al cargo, incluyendo los siguientes temas relacionados con SST:

- Aspectos generales de la empresa.
- Aspectos generales y legales en Seguridad y salud en el trabajo.
- Política de SST.
- Política de prevención y control de consumo de alcohol, tabaco y drogas.
- Reglamento de higiene y seguridad industrial.
- Funcionamiento del Comité Paritario de SST y/o Vigía SST.
- Funcionamiento del comité de convivencia laboral.
- Plan de emergencias.
- Notificación de riesgos asociados a la labor a desempeñar y sus controles.
- Procedimientos seguros para el desarrollo de la tarea.
- Responsabilidades generales en SST.
- Normas de seguridad y salud en el trabajo de acuerdo con la actividad a realizar.
- Sistema General de Seguridad Social.

Anexo 15. programa de inducción, capacitación y entrenamiento.

5. AUDITORIA Y REVISIÓN POR LA ALTA DIRECCIÓN DEL SG-SST

Se contempla realizar una auditoría interna al sistema de gestión de SST por parte del Coordinador SST de la empresa en donde se verificará el cumplimiento de éste y los requerimientos realizados por las entidades de control como son: Supervisor, entre otras.

La auditoría al Sistema de Gestión de Seguridad y Salud en el trabajo SG-SST de este contrato se incluirá dentro del plan de auditorías general del SG-SST de la empresa GESTION RURAL Y URBANA S.A.S, el cual se realizará una vez al año con la participación del personal que haga parte del Comité Paritario de Seguridad y Salud en el Trabajo.

Igualmente, se presentarán los resultados de la implementación del SG-SST de este contrato en la revisión por la alta dirección de GESTION RURAL Y URBANA S.A.S. que se realiza anualmente en diciembre, la cual debe permitir evaluar la estructura y el proceso del Sistema de Gestión de Seguridad y Salud en el Trabajo. Los resultados de la revisión de la alta gerencia serán documentados y divulgados a los integrantes del Comité Paritario de Seguridad y Salud en el Trabajo COPASST, para que se tomen las medidas preventivas y correctivas y de mejora a que haya lugar.

5.1. Reportes e investigación de incidentes, accidentes de trabajo y enfermedades laborales.

Se realizarán los reportes de accidentes de trabajo que ocurran, con la respectiva investigación acorde con la resolución 1401 de 2007 o a la que aplique, los cuales se entregarán en los informes mensuales.

En caso de que ocurra un AT, se seguirá el respectivo procedimiento indicado en el numeral 4.4. de este documento.

Se dará aviso telefónico inmediato a la ARL COLMENA a la línea (601) 4010447 sobre los accidentes de trabajo que se lleguen a presentar a los trabajadores directos, igualmente se realizará el reporte correspondiente dentro de las siguientes 48 horas de la ocurrencia de los eventos por la página web www.colmenaseguros.com para legalizar el accidente de trabajo o reportar los accidentes en la ARL correspondiente de los Subcontratistas.

Se realizará la investigación y análisis de las causas de los mismos, con el fin de aplicar las medidas correctivas necesarias al interior de la empresa y así evitar su nueva ocurrencia.

La investigación de las causas de los incidentes, accidentes de trabajo y enfermedades laborales, se adelantará acorde con lo establecido en la Resolución número 1401 de 2007 expedida por el entonces Ministerio de la Protección Social, hoy Ministerio del Trabajo, y las disposiciones que los modifiquen, adicionen o sustituyan. El resultado de esta investigación permitirá entre otras, las siguientes acciones:

- Identificar y documentar las deficiencias del Sistema de Gestión de la Seguridad y Salud en el Trabajo (SG-SST), lo cual debe ser el soporte para la implementación de las acciones preventivas, correctivas y de mejora necesarias.
- Informar de sus resultados a los trabajadores directamente relacionados con sus causas o con sus controles, para que participen activamente en el desarrollo de las acciones preventivas, correctivas y de mejora.
- Informar a la alta dirección sobre el ausentismo laboral por incidentes, accidentes de trabajo y enfermedades laborales.

5.2. Estadísticas de accidentalidad

Siguiendo el formato establecido por la empresa, se elaborará, actualizará y analizará mensualmente las estadísticas de los accidentes e incidentes y enfermedades laborales

ocurridos a los trabajadores, teniendo en cuenta: los indicadores contenidos en la Resolución 0312 de 2019. Dicha información se adjuntará en los informes mensuales.

6. MEJORAMIENTO CONTINUO

Se generan los planes de mejoramiento de acuerdo con las fuentes mencionadas en el Decreto 1072 de 2015:

- Resultados de las auditorías realizadas.
- Acciones arrojadas por la investigación de incidentes, accidentes de trabajo y enfermedades laborales.
- Verificación del cumplimiento de los objetivos del SG-SST.
- Recomendaciones presentadas por los trabajadores y el COPASST.
- Decisiones adoptadas en revisión por la alta dirección.
- Recomendaciones de ARL.
- Cambios en la normatividad de riesgos laborales.

GRU S.A.S
GESTIÓN RURAL Y URBANA S.A.S

POLITICA PREVENCIÓN ACOSO LABORAL

La empresa **GESTION RURAL Y URBANA S.A.S**, consciente de la importancia de fomentar un ambiente laboral armónico, sano y seguro para quienes trabajan en la Organización, expresa que todos los trabajadores tienen derecho a un espacio laboral libre de discriminación, coerción y maltrato; por lo tanto promueve la vivencia de valores como el respeto, la equidad, la tolerancia y la solidaridad, así mismo, la prevención y corrección de posibles conductas de acoso laboral, acoso sexual, violencia de género, al igual, que propende por la inclusión de todos los colaboradores.

La empresa cuenta con la participación activa y responsabilidad de todos los trabajadores en la construcción de un ambiente de trabajo que favorezca la resolución de los conflictos y diferencias erradicando el acoso laboral.

Como mecanismo de prevención del acoso laboral y que facilite la conciliación se ha creado el comité de convivencia laboral, el cual en conjunto con todos los trabajadores de la empresa **GESTION RURAL Y URBANA SAS**, establecerá actividades tendientes a generar una consciencia colectiva de sana convivencia que promueva los valores vinculados al trabajo en condiciones dignas y justas; la armonía entre quienes comparten vida laboral empresarial y el buen ambiente en la empresa y proteja la intimidad, la honra, la salud mental y la libertad de las personas en el trabajo.

De otro lado, la empresa se compromete a realizar acciones para prevenir y erradicar las posibles conductas de acoso laboral y a defender el derecho de todos(as) los trabajadores(as) para ser tratados con dignidad en el trabajo.

GRU S.A.S
GESTIÓN RURAL Y URBANA S.A.S.

POLITICA DE PREVENCION Y CONTROL DE CONSUMO DE ALCOHOL, TABACO Y DROGAS

Es política de GESTION RURAL Y URBANA S.A.S., mantener lugares y ambientes sanos y óptimos de trabajo, que permitan alcanzar los más altos estándares en seguridad, salud y productividad. La Empresa es consciente de que el alcoholismo, la drogadicción, el abuso de sustancias alucinógenas, enervantes y el tabaquismo por parte del personal y contratistas, afectan los ambientes de trabajo, agravan los riesgos ocupacionales, atentan contra la salud y la seguridad, constituyéndose en amenaza para la integridad física y mental para la población trabajadora en general.

Para cumplir con este propósito conforme a lo dispuesto en los artículos 56, 58 del Decreto 1295 de 1994, la Resolución Conjunta de los Ministerios de Trabajo y Seguridad Social y de Salud No. 1016 de 1989, Resolución del Ministerio de Trabajo y Seguridad Social y demás normas concordantes y/o reglamentarias, la empresa **GESTION RURAL Y URBANA S.A.S,** ha definido y establecido los siguientes aspectos a tener en cuenta:

- Está estrictamente prohibido presentarse a trabajar en estado de embriaguez o bajo los efectos de resaca o guayabo; así como bajo los efectos de drogas y/o sustancias alucinógenas y enervantes o que creen dependencia.
- Se prohíbe fumar, en el desarrollo de los trabajos, dentro de las instalaciones, centros de trabajo, obras, en la operación de vehículos y en las instalaciones de nuestros clientes. Sólo se podrá fumar en la hora destinada para el almuerzo y fuera de las instalaciones de la empresa.
- Se prohibe la posesión, consumo y venta de alcohol, cigarrillos y sustancias sicoactivas o drogas en las diferentes áreas y centros de trabajo de la empresa.
- La empresa propenderá por la activa participación en todos los niveles de GESTION RURAL Y URBANA S.A.S en la prevención del uso de alcohol y sustancias psicoactivas o drogas.
- La empresa estimulará a los colaboradores afectados por el uso del tabaco, el uso de alcohol y sustancias Psicoactivas a que participen en programas para su tratamiento.
- La Empresa se reserva el derecho de realizar en cualquier momento inspecciones y pruebas de laboratorio a su personal en las instalaciones de la Empresa.

Esta política forma parte del contrato de trabajo y es de cumplimiento obligatorio por parte de todo el personal de la Empresa y de contratistas. La violación de esta política, se considera falta grave y en consecuencia la Empresa puede adoptar medidas disciplinarias, inclusive dar por finalizado el contrato de trabajo por justa causa de acuerdo con lo establecido en el Reglamento Interno de Trabajo y la Ley, según sea el caso.

Total, Valor Estándar Valores Míminos de Calificación						97.50

Cuando se cumple con el ítem del estándar la calificación será la máxima del respectivo ítem, de lo contrario su calificación será igual a cero (0).

En los ítems de la Tabla de Valores que no aplican para las empresas de menos de cincuenta (50) trabajadores clasificados con riesgo I, II, o III, de conformidad con los Estándares Mínimos de SST vigentes, se deberá otorgar el porcentaje máximo de calificación en la columna “No Aplica” frente al ítem correspondiente.

El presente formulario es documento público. La información aquí consignada debe ser veraz. La inclusión de manifestaciones falsas estará sujeta a las sanciones contempladas en la Ley 599 de 2000, Código Penal Colombiano (artículos 287, 288, 291, 294).

SISTEMA GESTION DE SEGURIDAD Y SALUD EN EL TRABAJO	GRU SAS GESTIÓN RURAL Y URBANA S.A.S
	F-SST-26-VER-01

FORMATO DE NOTIFICACION DE RIESGOS

Fecha: _____ dando cumplimiento a los requisitos legales establecidos en el decreto 1072 de 2015 capítulo 6 Sistema de Gestión de la Seguridad y Salud en el Trabajo (SG-SST), se le informa al trabajador descrito a continuación, de los riesgos a que podría estar expuesto en el desempeño de su actividad laboral, con el fin de que se tomen las medidas de precaución y prevención a que haya lugar y preservar su salud y bienestar. Igualmente, se le describe el equipo de protección que debe utilizar en TODO momento, mientras se encuentra laborando para **GESTION RURAL Y URBANA S.A.S.**

TRABAJADOR: _____ C.C. _____
Obra: _____Cargo:_____

RIESGOS COMUNES Y/O ESPECIFICOS

Indicar con una X los riesgos a los que el trabajador estará expuesto:

QUÍMICOS		**FISICOS**	
Polvos orgánicos e inorgánicos		Exposición a Ruido (impacto intermitente y continuo)	
Fibras		Iluminación (luz visible por exceso o por deficiencia)	
Líquidos (nieblas y rocíos)		Vibraciones (Cuerpo entero o segmentaria)	
Gases y vapores		Temperaturas extremas (calor o frío)	
Humos metálicos y no metálicos		Presión atmosférica (Normal y ajustada)	
Material particulado		Radiaciones ionizantes (rayos X, gama, beta y alfa)	
Sustancias cancerígenas		Radiaciones no ionizantes (laser, ultravioleta, infraroja)	
BIOMECANICO		**CONDICIONES DE SEGURIDAD**	
Postura (prolongada, mantenida, forzada, antigravitaciones)		Mecánico (Elementos de máquinas, herramientas, piezas a trabajar, materiales proyectados, sólidos o fluidos)	
Esfuerzos		Eléctricos (Alta y baja tensión, estática) Líneas eléctricas aéreas	
Movimiento repetitivo		Locativo (almacenamiento, superficies de trabajo (irregularidades, deslizantes, con diferencia de nivel), condiciones de orden y aseo, caídas de objetos)	
Manipulación manual de cargas		Tecnológico (explosión, fuga, derrame, incendio)	
BIOLÓGICO		Partes mecánicas en movimiento	
Virus		Accidentes de tránsito	
Bacterias		Públicos (robos, atracos, asaltos, atentados, desorden público, etc)	
Hongos		Trabajos en altura	
Ricketsias		Espacios confinados	
Parásitos		Izaje de Cargas	
Picaduras		Excavaciones	
Mordeduras		**FENOMENOS NATURALES**	
Fluidos o excrementos		Sismo	
PSICOSOCIAL		Terremoto	
Gestión Organizacional (estilo de mando, pago, contratación, manejo de cambios)		Vendaval	
Características de la organización (comunicación, tecnología, organización del trabajo, trabajo bajo presión)		Inundación	
Características del grupo social del trabajo (relaciones, cohesión, calidad de interacciones, trabajo en equipo		Derrumbe	
Condiciones de la tarea (carga mental, contenido de la tarea, tarea monótona y repetitiva)		Precipitaciones (lluvias, granizadas, heladas)	
Interfase persona tarea (conocimientos y habilidades con relación a la tarea, autonomía, identificación de la persona con la tarea y la organización)			
Jornada de trabajo (trabajo nocturno, rotación, horas extras			

EQUIPOS DE PROTECCIÓN REQUERIDOS Y OBLIGATORIOS

PROCEDIMIENTO DE TRABAJO SEGURO USO DE PULIDORA	GRU S.A.S GESTIÓN RURAL Y URBANA SAS
	PD-SST-08-VER-01

1. OBJETO

Establecer normas prácticas y recomendaciones para realizar trabajos de manera segura con pulidoras, previniendo la ocurrencia de accidentes de trabajo.

2. ALCANCE

Este procedimiento aplica para todas las áreas operativas de GESTIÓN RURAL Y URBANA S.A.S. en las que se realice operación de pulidoras. Aplica para trabajos realizados por personal directo y por personal de contratistas.

3. DEFINICIONES

Pulidora: Equipo de trabajo eléctrico empleado para pulir superficies de diferentes materiales mediante movimientos rotatorios con un material abrasivo.

4. ELEMENTOS DE PROTECCIÓN PERSONAL NECESARIOS

Careta cara completa. Previene riesgo de proyección de partículas y se requiere protección de cara completa.
Monogafas.
Protección respiratoria. Como protección de partículas suspendidas en el aire producto del pulido de piezas.
Protectores auditivos. Tipo copa y serán de uso obligatorio por el ruido generado por la herramienta.
Calzado de seguridad. Bota de caña alta con puntera de acero.
Protección para las manos: Guantes de vaqueta.
Casco de protección. Protección ante desviación de partículas.
Protección para el cuerpo: Ropa de trabajo adecuada. Overol.

PROHIBICIONES:

- No usar bufandas, anillos, pulseras, reloj o ropa suelta, los cuales se pueden enredar con la pulidora.

- Queda prohibida la utilización de esta herramienta por personal que no haya sido autorizado y/o que no tenga la experiencia para hacerlo.
- Es prohibido utilizar la herramienta si está cansado o bajo el efecto de drogas, alcohol o medicamentos.
- Es prohibido Utilizar la herramienta para cortar madera, ya que no es la adecuada. Para esta actividad se debe utilizar una sierra circular.

5. CONDICIONES GENERALES

Para el uso de la pulidora es necesario tener en cuenta las condiciones o características particulares de cada pulidora, así como el manual de uso del fabricante. Este procedimiento menciona normas de seguridad para que el operador la utilice de modo seguro.

6. ACTIVIDADES

PREVIAS:

- Usar los elementos de protección personal requeridos en el numeral 4.
- Realizar la inspección diaria del equipo verificando que no posea daños estructurales evidentes, que el cable se encuentre en buenas condiciones, que la guarda de seguridad se encuentre en su lugar y asegurada, **que el disco este correctamente asegurado y en buen estado**. Revise que no haya piezas en movimiento mal alineadas o trabadas, piezas rotas o cualquier otra situación que pueda afectar el correcto funcionamiento de la herramienta. SI ENCUENTRA DAÑOS NO UTILICE LA HERRAMIENTA, PONER LA MÁQUINA FUERA DE SERVICIO Y AVISAR INMEDIATAMENTE AL RESIDENTE DE OBRA PARA SU REPARACIÓN.
- Verificar que el trabajador que vaya a manipular el equipo sea personal autorizado, formado y con experiencia para su utilización.
- Visualizar con atención todas las etiquetas o símbolos de advertencia dispuestas en la máquina.
- Las operaciones de mantenimiento, reparación o cualquier modificación de la máquina sólo podrán ser realizadas por personal especializado y autorizado, en lo posible por el mismo fabricante.
- Verificar la realización simultánea de otros trabajos y del estado del entorno de trabajo (obstáculos, suciedad, etc.).
- Establecer un lugar apropiado para la realización de la actividad con pulidora (lejos de materiales combustibles, sustancias inflamables, cables eléctricos, etc.).
- Realizar la notificación de los riesgos a los trabajadores que utilizarán el equipo y a personal cercano a la actividad.

DURANTE:

- No use el cable indebidamente. No use el cable para transportar, tirar o desenchufar la herramienta. Mantenga el cable alejado del calor, el aceite, los bordes afilados o las piezas móviles. Proteger el cable eléctrico cuando transite por zonas de paso de trabajadores o vehículos.
- Al operar la herramienta en el exterior, utilice un cable prolongador adecuado para tal uso.
- Los enchufes de la herramienta deben adaptarse a la toma corriente. Nunca modifique el enchufe.
- Mantener la zona de trabajo lo más limpia posible, libre de escombros, fragmentos, etc.
- No permitir la presencia de otros trabajadores dentro del radio de acción de la máquina durante su uso. En caso de ser necesario, situar las protecciones adecuadas respecto a la zona de circulación de peatones, trabajadores o vehículos (cinta de señalización). Las personas que entren al área de trabajo deben portar los elementos de protección personal.
- No utilizar la máquina en lugares polvorientos, húmedos o mojados.
- No exponga la herramienta a la lluvia, ni a condiciones de humedad, ya que si le entra agua a la herramienta aumenta el riesgo de descarga eléctrica.
- No utilice la herramienta si está cansado o bajo el efecto de drogas, alcohol o medicamentos. Un momento de descuido mientras se opera la herramienta puede provocar lesiones personales **graves**.
- Cuando la iluminación natural sea insuficiente, deberá paralizarse el trabajo si no existe una iluminación artificial que garantice una adecuada visibilidad en el lugar de trabajo.
- Mantenga las herramientas de corte afiladas y limpias.
- Utilice la herramienta **SOLAMENTE** para lo que fue diseñada.
- No utilice accesorios que no están diseñados y recomendados por el fabricante de la herramienta.
- El tamaño del eje de los discos y cualquier otro accesorio debe adaptarse correctamente al eje de la herramienta.
- No utilice un accesorio dañado, inspecciónelo antes de cada uso. Si la herramienta o el accesorio sufre una caída, inspecciónelo para verificar su estado. Después de inspeccionar e instalar un accesorio, ubíquese y ubique a otras personas lejos del plano del accesorio giratorio y haga funcionar la herramienta a velocidad máxima sin carga durante un minuto.

DESPUÉS:

- No abandonar la máquina en el suelo con el cable eléctrico conectado. Al finalizar el trabajo, desconectar el cable eléctrico de la toma de corriente.
- Al final de la jornada, guardar la máquina en un lugar seguro donde no pueda ser usada por personal no autorizado o sin la experiencia para operarla.
- Limpie frecuentemente los orificios de ventilación de la herramienta. La acumulación excesiva de polvo metálico puede producir riesgos eléctricos.

7. MEDIDAS DE SEGURIDAD SOSTENIENDO (TRABAJANDO) CON LA MAQUINA

- Evite poner en marcha la herramienta involuntariamente. Asegúrese de que el interruptor está apagado antes de conectar la fuente de alimentación. Transportar la herramienta con el dedo apoyado sobre el interruptor o enchufar la herramienta con el interruptor en la posición de encendido puede provocar accidentes de trabajo.
- Retire la clavija de ajuste o la llave de tuercas antes de encender la herramienta para evitar lesiones personales.
- NO se estire demasiado. Conserve el equilibrio y posiciónese adecuadamente en todo momento, para un mejor control de la herramienta.
- Mantenga el cabello, la ropa y los guantes alejados de piezas en movimiento, ya que puedan quedar atrapados.
- No fuerce la herramienta eléctrica, utilícela a la velocidad para la cual fue diseñada.
- No utilice la herramienta si no la puede encender o apagar con el interruptor, ya que es peligroso y puede provocar accidentes.
- Desconecte el enchufe de la fuente de alimentación de la herramienta antes de realizar cualquier ajuste, cambio de accesorios o almacenar las herramientas eléctricas.
- Cuando realice una operación en la que el accesorio de corte pueda tocar cables eléctricos ocultos o su propio cable, sostenga la herramienta solamente por las superficies de agarre aisladas, para evitar una descarga eléctrica al operador.
- Nunca apoye la herramienta hasta que el accesorio se haya detenido completamente para evitar su pérdida de control.
- Nunca haga funcionar la herramienta mientras la carga a su lado, para evitar que se le enganche en la ropa y se lance el accesorio hacia su cuerpo.
- No use la herramienta cerca de materiales inflamables. Las chispas pueden encender estos materiales.
- No utilice accesorios que requieran refrigerantes líquidos, ya que pueden producir una electrocución o descarga eléctrica.
- Siempre utilice el mango lateral. Ajuste el mango con firmeza.
- Sostenga la herramienta con firmeza y ubique el cuerpo y el brazo para poder resistir las fuerzas de retroceso.
- Nunca coloque la mano cerca del accesorio giratorio, ya que éste puede hacer un retroceso sobre la mano.
- No ubique el cuerpo en el área hacia donde la herramienta eléctrica se desplazará si se produce un retroceso. El retroceso impulsará la herramienta en la dirección opuesta al movimiento del disco en el punto de atascamiento.
- No utilice discos desgastados de herramientas eléctricas más grandes, ya que pueden estallar.
- No se debe aplicar excesiva presión al disco en el corte, se debe permitir que el disco avance a su propia velocidad de corte. La aplicación excesiva de presión quiere decir que el disco está desgastado, lo que provoca una reducción en las revoluciones del disco y un posible atascamiento

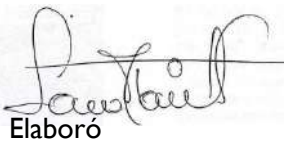
del mismo. No someter el disco a sobreesfuerzos, laterales o de torsión. Los resultados pueden ser nefastos: rotura del disco, sobrecalentamiento, pérdida de velocidad y de rendimiento, rechazo de la pieza o reacción de la máquina, pérdida de equilibrio, etc.

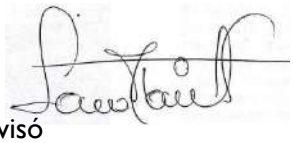
- En el caso de trabajar sobre piezas de pequeño tamaño o en equilibrio inestable, asegurar la pieza a trabajar, de modo que no sufran movimientos imprevistos durante la operación.
- Al desarrollar trabajos con riesgo de caída de altura, asegurar siempre la postura de trabajo, ya que en caso de pérdida de equilibrio por reacción incontrolada de la máquina, lo efectos se pueden multiplicar.
- No utilizar la máquina en posturas que obliguen a mantenerla por encima del nivel de los hombros, ya que en caso de pérdida de control, las lesiones pueden afectar a la cara, pecho o extremidades superiores.
- Se deben almacenar los discos en lugares secos, sin sufrir golpes y siguiendo la indicaciones del fabricante.
- Trabajar sobre una superficie estable, limpia, nivelada y lo más horizontal posible. Mantener los dos pies apoyados sobre el suelo, conservando el equilibrio en todo momento.
- No trabajar en las siguientes situaciones: sobre escaleras, en zonas poco accesibles, en posiciones demasiado inclinadas hacia delante o lateralmente.

8. CONSECUENCIAS QUE SE PODRÍAN GENERAR POR EL USO DE LA HERRAMIENTA

- Golpes en manos y brazos.
- Proyección de fragmentos o partículas.
- Heridas en manos, brazos y otras partes del cuerpo causando lesiones de diferente índole y gravedad a quien la opera y a terceros.
- Abrasiones en manos.
- Alteraciones auditivas.
- Alteraciones musculares por la vibración.
- Alteraciones respiratorias por inhalación de humos metálicos, polvo.
- Proyección de partículas.
- Descargas eléctricas.
- Alteraciones lumbares por adopción de posturas incómodas.
- Amputaciones e incluso la muerte de acuerdo con la gravedad de la lesión.
- Contacto con superficies calientes.

9. CAPACITACIÓN E INSTRUCCIÓN





A los trabajadores que vayan a utilizar la herramienta se les deberá dar a conocer este procedimiento de trabajo seguro. Así como a trabajadores que por necesidad, deban estar cerca de la actividad.

Indicar respecto a la obligatoriedad del uso de elementos de protección personal, inspección de la zona antes de iniciar el trabajo, inspección de la herramienta antes de su uso.

PROCEDIMIENTO DE TRABAJO SEGURO USO DE PULIDORA	GRU SAS GESTIÓN RURAL Y URBANA SAS
	PD-SST-08-VER-01

Este procedimiento deberá estar en el sitio de trabajo.

PROCEDIMIENTO TRABAJO SEGURO CON SOLDADURA	GRU S.A.S GESTIÓN RURAL Y URBANA S.A.S
	PD-SST-10-VER-01

1. OBJETIVO

Establecer y definir el procedimiento de trabajo seguro con soldadura, con el fin de proteger a los trabajadores contra los riesgos presentes en la actividad.

2. ALCANCE

Aplica a todas las actividades en las que se deba trabajar con soldadura en las obras y debe ser de obligatorio cumplimiento por parte de todo el personal que ejecute y supervise esta labor.

3. GENERALIDADES

El término soldadura se aplica a la unión de piezas, generalmente metálicas, a base de calor y / o presión directamente sobre las superficies a unir o utilizando un tercer elemento plástico o metálico fundido entre ellas. Existen principalmente dos grandes clases de soldadura:

Soldadura por arco eléctrico: El arco se establece entre un electrodo y las piezas a soldar, conectados a una fuente de corriente alterna o continua. La temperatura cuando las piezas llegan a juntarse alcanza los 4.000 °C aproximadamente. Por lo general, es necesario añadir metal fundido a la unión por medio de la fusión del propio electrodo (proceso por electrodos consumibles) o bien por la fusión de una varilla de aportación independiente que no está conectada a la corriente (proceso por electrodos no consumibles).

Oxiacetilénica: Es una de las soldaduras fuertes. En la soldadura autógena, el soporte oxiacetilénico, generalmente de tipo manual, se alimenta con oxígeno o con aire y un gas combustible, mezclándose ambos componentes antes de que se produzca la combustión en la propia boquilla del soplete. El calor funde las superficies metálicas de las piezas a soldar, produciéndose la unión de las mismas.

4. RESPONSABILIDADES

Representante Legal:

- Disponer de los recursos necesarios para implementar las medidas de seguridad en la obra.
- Velar a través de quien delegue que se cumplan con las medidas de seguridad industrial y salud ocupacional mencionadas en este procedimiento de trabajo seguro.

Director de obra:

- Será el responsable de asegurar el cumplimiento de este procedimiento por parte del Residente de obra.

Residente de Obra:

- Responsable de divulgar y exigir el cumplimiento de este procedimiento a todo el personal a su cargo.
- Tomar las medidas necesarias para garantizar el cumplimiento de este procedimiento.
- Sugerir modificaciones a este procedimiento o acciones que sean necesarias para aumentar la seguridad de los trabajadores.
- Diligenciar y autorizar el permiso de trabajo correspondiente.

Profesional SST:

- Exigir el cumplimiento de este procedimiento de trabajo seguro.
- Realizar inspecciones de seguridad que permitan evaluar la implementación de este procedimiento.
- Realizar los ajustes que considere pertinentes a este procedimiento de acuerdo con la normatividad y las condiciones específicas de la obra.
- Solicitar evidencias al director y/o residente de la obra los registros de la implementación de las medidas de seguridad que se describen en este procedimiento.
- Informar al representante legal respecto de los incumplimientos a las normas de seguridad establecidas para el desarrollo de la labor.

Trabajadores:

- Dar estricto cumplimiento a las medidas de seguridad que se establecen en este procedimiento de trabajo seguro.
- Utilizar los elementos de protección personal necesarios para realizar la labor.
- Informar al Residente de Obra cualquier condición de trabajo insegura o acto inseguro que pueda generar accidente de trabajo.
- Mantener el área de trabajo con las condiciones de seguridad para evitar lesiones a compañeros y/o terceros.

5. NORMAS DE SEGURIDAD PARA EL TRABAJO CON SOLDADURA

Estas normas de seguridad son indispensables para protegerse contra los riesgos que genera el trabajo con soldadura:

- Es necesario comprobar que no hay personas en el entorno del puesto de trabajo y delimitar la zona.
- No se debe soldar en lugares donde se almacenen materiales inflamables, combustibles, donde exista riesgo de explosión o en el interior de recipientes que hayan contenido sustancias inflamables. Se debe comprobar que todos los materiales inflamables están alejados o protegidos de chispas.
- No se debe soldar en locales donde se hayan realizado trabajos en los que hayan podido desprenderse gases o vapores inflamables. Asegúrese que se hayan ventilado suficientemente.
- No se debe soldar en superficies que contengan grasas o aceites.
- Es necesario contar con un extintor en la zona de soldadura.
- No se debe engrasar ninguna parte del equipo de soldadura con gas.
- Cuando los materiales a soldar tengan algún tipo de recubrimiento metálico, pintura o grasas o aceites, se deben eliminar limpiándolos mediante raspado o esmerilado, disolventes, etc.
- Cuando se trabaje con aleaciones o revestimientos que puedan contener metales como el cromo, níquel, cadmio, zinc, plomo, etc., el puesto de trabajo ha de ser dotado de sistemas de ventilación general y extracción localizada suficientes para eliminar el riesgo de intoxicación por humos y gases de soldadura.
- El soldador se debe cubrir los brazos antes de empezar a soldar.
- Es necesario que se cuente con el permiso de trabajo, se debe colocar en un lugar visible en el área donde efectuará el trabajo. Para autorizar el permiso de soldar se debe contar con los elementos de protección personal necesarios para realizar la labor y la verificación de la lista de chequeo correspondiente.
- El equipo de protección personal necesario y los elementos de seguridad a utilizar, varían según la tarea que se esté realizando, pero generalmente se debe usar ropa protectora que permita

libertad de movimientos y al mismo tiempo proporcione una cobertura adecuada contra las quemaduras causadas por chispas, salpicaduras de soldadura y radiación del arco.

- Antes de comenzar el trabajo se debe leer el manual de instrucciones de seguridad que entrega el distribuidor de soldadura o el fabricante.
- Se debe leer las advertencias e instrucciones de seguridad de las placas de características y etiquetas del equipo, así como las etiquetas y las Hojas de Datos de Seguridad de los materiales que se utilizarán.
- Se debe usar siempre guantes gruesos e incombustibles, como los de cuero, para proteger las manos de las quemaduras, cortes y rasguños. Además, siempre que estén secos y en buenas condiciones, ofrecerán algún aislamiento contra el choque eléctrico.
- Los ojos deben protegerse contra la exposición a la radiación (rayos de los arcos). La radiación infrarroja causa quemaduras de la retina y cataratas, incluso una exposición breve a la radiación ultravioleta (UV) puede provocar una quemadura ocular conocida como 'resplandor del soldador'. Normalmente el 'resplandor del soldador' es temporal, pero la exposición repetida o prolongada puede culminar en lesiones oculares permanentes.
- Durante el proceso de utilización de soldadura se debe utilizar protectores auditivos para: que no penetren en los oídos las chispas o trozos metálicos que se desplazan por el aire y para evitar la pérdida auditiva que es el resultado de trabajar cerca de equipos de soldadura por arco, fuentes de alimentación y procesos ruidosos.
- Se debe dar aviso a los compañeros que se encuentren cerca al soldador, de que se iniciarán los trabajos de corte y/o soldadura para evitar algún accidente de trabajo con las chispas.
- Asegúrese de que los equipos con los que va a trabajar tienen la energía bloqueada.
- De ser posible, realice todos los trabajos de soldadura a nivel de piso, si no se puede, se debe señalizar el área inferior de trabajo mediante señalización y delimitar el área donde se efectuará el trabajo en altura.
- Al iniciar el trabajo de soldadura, el operador debe estar acompañado de otra persona que se hará cargo del extintor en caso de que sea necesario.
- Se debe ventilar muy bien el área, ya que durante el proceso de soldadura se generan gases tóxicos y procurar respirar aire fresco cada 15 minutos si el trabajo es por un periodo de tiempo largo.
- Una vez terminado el trabajo, verificar que el área queda perfectamente limpia y libre de cualquier residuo de soldadura o material utilizado.
- Se debe evitar el uso de cadenas, pulseras, anillos, ropa holgada, pelo suelto que puedan generar un accidente de trabajo.
- Es importante mantener el orden en el lugar de trabajo, ya que el riesgo de lesiones se amplifica por estar involucrado un grupo mayor de personas. Se puede haber inspeccionado el equipo y haberlo encontrado bien, pero toda la precaución no tendrá importancia si, por ejemplo, un compañero tropieza con el cable y eso provoca lesiones por choque eléctrico, metal caliente o caída.
- Mantener todos los equipos, cables, mangueras, cilindros, etc., fuera de toda ruta de tránsito como puertas, pasillos y escaleras. Una buena práctica es limpiar la zona de trabajo cuando haya finalizado. Esto no sólo ayudará a protegerse y proteger a los demás; también facilita trabajar en forma eficiente.
- El equipo de soldar (autógena o eléctrica) debe ser devuelto a su sitio de almacenamiento para evitar posibles daños al equipo.
- Debido a la alta presión del gas de los cilindros, se debe respetar las normas de seguridad para su almacenamiento y uso. Se debe examinar los cilindros del mismo modo que el resto de los equipos; revisar la etiqueta del cilindro para asegurarse de que sea el gas protector adecuado

para el proceso, y verificar que los reguladores, mangueras y accesorios de conexión sean los correctos para ese gas y esa presión, y estén en buenas condiciones.
- Cuando se termine el trabajo colocar nuevamente el extintor en su sitio.

6. PERMISO DE TRABAJO

Por ser trabajo en caliente, es necesario implementar el permiso de trabajo seguro, el cual será diligenciado por el residente de obra y firmado por el trabajador que va a realizar la labor.

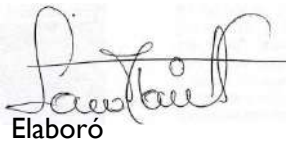
7. RIESGOS IDENTIFICADOS DURANTE LA LABOR

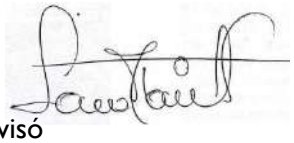
- Caídas a distinto nivel cuando se debe realizar montaje de piezas en altura (estructuras metálicas, reparaciones, etc.), trabajos sobre escaleras manuales.
- Caídas al mismo nivel por obstáculos en zonas de paso como cables, piezas, restos, etc.
- Caída de objetos en manipulación.
- Choques y golpe contra objetos por material almacenado inadecuadamente.
- Cortes, golpes con objetos y herramientas, proyección de fragmentos de partículas y atrapamientos por y entre objetos.
- Riesgo de incendio y explosión por el uso de gases inflamables.
- Inhalación de humos metálicos.
- Quemaduras en ojos y piel, por contacto con objetos calientes que se estén soldando, por proyección de partículas y chispas de metal fundido durante la operación.
- Riesgo eléctrico por utilización de equipo de soldadura eléctrica.
- Exposición a radiaciones no ionizantes por radiación ultravioleta infrarroja y visible, que pueden producir quemaduras, aceleran el envejecimiento e incrementan la probabilidad de desarrollar cáncer. De igual manera, puede producir pérdida de visión y cataratas.
- Exposición a ruido producto de equipos, compresores, máquinas, etc.
- Posturas inadecuadas por mantenimiento de posturas estáticas y/o forzadas.
- Por manipulación de cargas en el movimiento de piezas, equipos.

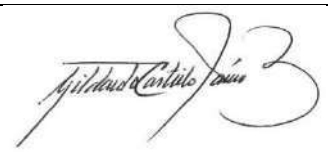
8. CAPACITACIÓN E INSTRUCCIÓN

A los trabajadores que vayan a realizar las actividades de soldadura se les deberá dar a conocer este procedimiento de trabajo seguro.

Indicar respecto a la obligatoriedad del diligenciamiento del permiso de trabajo, uso de elementos de protección personal, inspección de la zona antes de iniciar el trabajo, inspección de herramientas y equipos.







Este procedimiento deberá estar en el sitio de trabajo.

9. FORMATOS ASOCIADOS

F-SST-06 Permiso de trabajo seguro con soldadura.
F-GTH-05 Entrenamiento y capacitación.

PROCEDIMIENTO TRABAJO SEGURO CON SOLDADURA	GESTIÓN RURAL Y URBANA S.A.S
	PD-SST-10-VER-01

CONTROL DE CAMBIOS		
VERSION	**FECHA**	**MODIFICACIÓN**
00	16/03/2014	Edición
01	18/07/2018	Se ajustan los EPP a utilizar, prohibiciones y consecuencias que genera el uso de la herramienta. Se incluyen formatos asociados al procedimiento.

 Elaboró SANDRA P. ABRIL Lic. S.O. 8863 de 22/09/2008 Renovada con Lic. 14336 de 16/11/2018	 Revisó SANDRA P. ABRIL Lic. S.O. 8863 de 22/09/2008 Renovada con Lic. 14336 de 16/11/2018	 APROBO: Gildardo Castillo Sánchez Representante Legal

1. OBJETIVO

Establecer en GESTION RURAL Y URBANA SAS una práctica para presentar los requisitos mínimos de seguridad a tener en cuenta cuando se trabaja sobre instalaciones eléctricas de baja, media y alta tensión; así como en o alrededor de equipos diseñados para la generación, conversión, almacenaje, transmisión, transformación o utilización de la electricidad.

El Propósito de GESTION RURAL Y URBANA SAS. es evitar que se produzcan accidentes identificando los riesgos que se tienen por el mal manejo de la electricidad, para lo cual es necesario establecer e implementar procedimientos de trabajo seguro durante la realización de trabajos en equipos o elementos energizados con electricidad; así como generar elementos para promover en los trabajadores una cultura de autocuidado a través de la aplicación de normas de trabajo seguro.

2. ALCANCE

Este procedimiento aplica a todo el personal independiente de su forma de vinculación, que realice actividades de operación y/o mantenimiento de sistemas y aparatos eléctricos.

3. DEFINICIONES

a. **Equipo o Aparato:** Equipo diseñado para la generación, conversión, almacenaje, transmisión, transformación o utilización de electricidad.
b. **Alto Voltaje:** Normalmente excediendo el voltaje de 13.8 Kva. Es de responsabilidad de la Electrificadora, y no está cubierto en esta práctica.
c. **Medio Voltaje:** Normalmente excediendo el voltaje de 600 Vac hasta o 13.8 Kva entre conductores.
d. **Voltaje Bajo:** Normalmente no excediendo un voltaje máximo de 600 Vac.
e. **Aislamiento Eléctrico:** Desconectar sistema eléctrico "Interrupción Visible" de sus conexiones a las fuentes de tensión.
f. **Tierra:** Conectar a la masa general de tierra, de tal manera que asegure durante todo el tiempo, una descarga inmediata de energía eléctrica sin daño.
g. **Energizado:** Sistema cargado eléctricamente
h. **Desenergizado:** Significa en, o cerca de, cero voltaje y desconectado de cualquier sistema vivo.

4. ASPECTOS NORMATIVOS

- Ley 9 de 1979 Artículo 117. Todos los empleadores están obligados a:

Todos los equipos, herramientas, instalaciones y redes eléctricas deberán ser diseñados, construidos, instalados, mantenidos, accionados y señalizados de manera que se prevengan los riesgos de incendio y se evite el contacto con los elementos sometidos a tensión.

- Ley 9 de 1979 Artículo 118.

Los trabajadores que por naturaleza de sus labores puedan estar expuestos a riesgos eléctricos, serán dotados de materiales de trabajo y equipos de protección personal adecuados para prevenir tales riesgos.

- Norma Técnica Colombiana NTC 2050 o Código Eléctrico Colombiano.

Tiene como objetivo principal la salvaguardia de las personas y de los bienes, contra los riesgos que pueden surgir por el uso de a electricidad y se basa en estándares internacionales, tales como las normas IEC serie 50 (International Electrotechnical Commission) y la IEEE 100 (Institute of Electrical and Electronics Engineers).

- Ley 842 de 2003 Código de Ética Profesional aplicable a los ingenieros y profesionales afines y auxiliares.
- Leyes 51 de 1986, 19 de 1990 y 392 de 1997.

Reglamentarias del ejercicio profesional de las actividades relacionadas con la electricidad.

- Resolución No. 180398 de 2004

Por la cual se expide el Reglamento Técnico de Instalaciones Eléctricas (RETIE). Reglamenta y fija las condiciones técnicas que garantizan la seguridad en los procesos de generación, transmisión, transformación, distribución y utilización de la energía eléctrica en la República de Colombia.

5. RESPONSABILIDADES POR CARGO

5.1. GERENTE

- Asegurar que todos los empleados y contratistas tengan claridad suficiente sobre la seguridad eléctrica.
- Facilitar los recursos necesarios para disminuir la accidentalidad por causa del mal manejo de la electricidad.
- Velar porque se contraten personas calificadas técnica y legalmente competentes para ejecutar las actividades de diseño, construcción, remodelación o ampliación de la instalación eléctrica.
- Promover la implementación de este procedimiento de trabajo seguro y cumplimiento de las normas de seguridad al trabajar con electricidad.

5.2. INGENIERO RESIDENTE / DIRECTOR DE OBRA

- Contratar personas calificadas técnica y legalmente competentes para ejecutar las actividades de diseño, construcción, remodelación o ampliación de la instalación eléctrica.
- Es operacionalmente responsable de todo el equipo diseñado para la generación, conversión, almacenaje, transmisión, transformación o utilización de la electricidad instalada en la facilidad.
- Es el responsable de asegurarse que los empleados que trabajaban como parte del equipo hayan sido entrenados en sus responsabilidades individuales de trabajo, así como conocer los riesgos asociados al trabajo con la electricidad.
- Asegurarse que todos los equipos requeridos están en buenas condiciones y adecuados para los riesgos asociados.
- Asegurarse que se aplican prácticas y procedimientos aprobados.
- Reportar al Encargado del SGSST de GESTION RURAL Y URBANA SAS todo incidente y accidente que halla sido ocasionado por riesgo eléctrico.

5.3. RESPONSABLE SGSST

- Dar soporte y asesoría en los procesos de evaluación formal de riesgos y de aislamientos.
- Desarrollar programas de entrenamiento para hacer personas competentes en esta práctica.
- Evaluar la competencia de las personas señaladas para ejecutar aislamientos.
- Difundir las lecciones aprendidas pertinentes en toda la empresa.
- Dar soporte en las actividades de monitoreo del cumplimiento de esta guía.
- Programar entrenamientos de refresco para la manipulación y manejo de los equipos eléctricos.
- Validar que las acciones tomadas sean efectivas en la prevención y control de los factores de riesgo identificados en el panorama.
- Es responsable de que todas las personas involucradas en la operación de trabajo de los equipos de GESTION RURAL Y URBANA SAS estén familiarizados con este procedimiento.
- Verificar que todos los empleados que van a trabajar en la parte eléctrica hayan sido entrenados en caso de accidentes y que porten los elementos de protección personal.
- Realizar adecuado ATS y diligenciar el Permiso de Trabajo para Riesgo Eléctrico F-SST-42 00

5.4. TRABAJADORES Y/O CONTRATISTAS

Es obligación de los trabajadores:

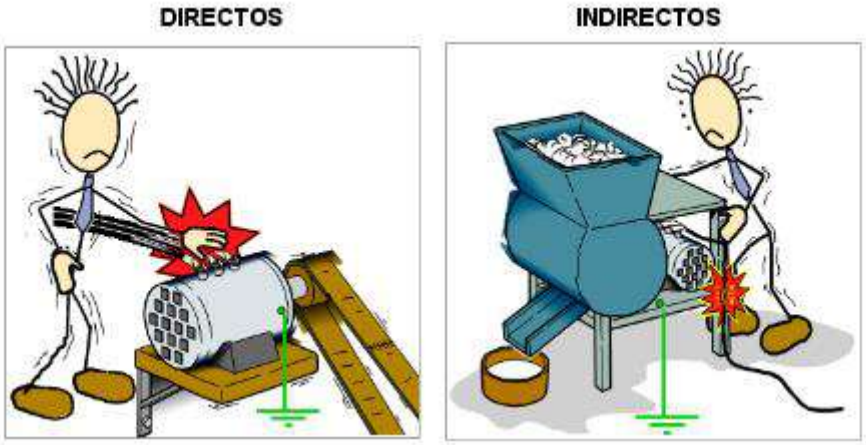
- Conocer los riesgos que pueden encontrar mientras que trabajan con instalaciones y/o aparatos eléctricos.
- Cumplir lo dispuesto en este procedimiento de trabajo seguro.
- Mantener buena practica de orden y aseo en y alrededor del área de trabajo.
- Reportar cualquier condición peligrosa, acto inseguro así como los incidentes en las áreas donde halla equipos y herramientas eléctricas.
- Cumplir con las acciones preventivas y/o Correctivas arrojadas por las inspecciones mensuales.
- Participar en las actividades de entrenamiento y capacitación sobre manejo seguro de la electricidad que la compañía programe.

6. RIESGOS DE TRABAJO CON ELECTRICIDAD

La gran difusión industrial y doméstica de la corriente eléctrica, unida al hecho de que no es perceptible por los sentidos, hacen caer a las personas en una rutina, despreocupación y falta de prevención en su uso. Por otra parte dada su naturaleza y los efectos, muchas veces mortales, que ocasiona su paso por el cuerpo humano, hacen que la corriente eléctrica sea una fuente de accidentes de tal magnitud que no se deben regatear esfuerzos para lograr las máximas previsiones contra los riesgos eléctricos.

Peligros mortales:

- Muerte por fibrilación ventricular. Esta es una de las principales causas de los fallecimientos por contacto eléctrico. El paso de la corriente por el corazón es fulminante y acaba con la vida de los accidentados en la gran mayoría de los casos.
- Muerte por asfixia. Tiene lugar cuando la electricidad atraviesa el tórax e interrumpe la respiración de los afectados.



Peligros no mortales:

- Tetanización muscular. Se produce cuando el paso de la corriente por el cuerpo humano provoca fuertes contracciones musculares y agarrotamientos.
- Quemaduras. Una de las consecuencias más comunes son las quemaduras que producen las descargas eléctricas, se pueden dar casos leves y otros muy graves en los que las secuelas también pueden ocasionar la muerte.

La electricidad puede producir daños de cuatro modos:

- Choque eléctrico o electrocución: una descarga recorre el cuerpo: si es de sólo 10 miliamperios (mA) ya presenta algún peligro, y si es de 80 o 100, puede tener resultados fatales.
- También se pueden producir caídas con resultados mortales como consecuencia de una electrocución.
- Puede actuar como fuente de ignición para vapores inflamables o explosivos.
- Además, una sobrecarga de la red puede ser fuente de incendios.

TIPOS DE ACCIDENTES POR ELECTROCUCIÓN

*Fuente: Monografias.com. Riesgos electricos en el sector de la construccion.

Consecuencias de un choque eléctrico:

- Combustión de la ropa.
- Contracciones violentas: Caídas, rotura de huesos, golpes.
- Daños en órganos internos: Corazón, Pulmones, Riñones.
- Coágulos sanguíneos y derrames internos.
- Destrucción de nervios, tejidos y músculos.

6.1. Elementos principales que determinan el accidente eléctrico

- Descuido.
- Falta de conocimientos.
- Falta de habilidad.
- Capacidad física y/o psicológica inadecuada.
- Instalaciones peligrosas de forma permanente.
- Instalaciones con defectos temporales.
- Debidos a otra persona.

- Olvido de normas o peligro.
- Mantenimiento deficiente.
- Estándares deficientes de trabajo.
- Falta de supervisión.

7. DESCRIPCION DE LA ACTIVIDAD

SEGURIDAD ELECTRICA

7.1. Aislamientos Eléctricos

Consiste en desenergizar, desconectar y asegurar la parte del sistema eléctrico, lo cual tiene un requerimiento de "interrupción visible" de sus conexiones a las fuentes de tensión y tiene relación directa con el trabajo que se va a realizar.

Normas y Precauciones para Aislamiento Eléctrico:

- Solamente personal entrenado y con experiencia en electricidad, con juicio para aplicar los procedimientos pertinentes y que, además, esté certificado, podrá efectuar el aislamiento eléctrico.
- Todo aislamiento eléctrico deberá tener su candado instalado en el punto respectivo.
- Cuando varias disciplinas intervengan en un trabajo y estén relacionadas con el mismo aislamiento, cada disciplina deberá instalar su propio candado. La Autoridad de Área Local también deberá instalar su propio candado.
- Debe asegurarse que todos los suministros eléctricos asociados con aparatos eléctricos particulares, planta o equipo, se encuentren aislados, de tal manera, que se impida cualquier posibilidad de ser alimentado accidentalmente, o energizarlo inadvertidamente.
- Se deben instalar o adjuntar tarjetas con anuncio de advertencia o de peligro, en los puntos apropiados de aislamientos.
- Siempre y donde se requiera efectuar un trabajo que exponga a alguien a un riesgo, causado por maquinaria en movimiento, conductores eléctricos expuestos o que impliquen peligros en caso de aplicar energía motriz, estos aparatos se deberán aislar eficazmente de la fuente de energía antes de iniciar el trabajo.

Ninguna persona podrá realizar trabajo alguno, de cualquier descripción, incluyendo mantenimiento, reparaciones, limpieza y prueba de partes de los aparatos eléctricos los cuales se están normalmente utilizando antes de que:

- Se tenga un permiso de trabajo que respalde la actividad a desarrollar y también al aislamiento.
- Se aíslen y se hayan seguido los pasos prácticos para bloquear los conductores vivos y hayan sido colocados anuncios de advertencia.
- Las llaves de los candados de aislamiento se aseguren en un sistema de control de llaves, por el electricista competente y autorizado.
- Se aterricen efectivamente las partes eléctricas, como es requerido.
- Se aíslen en posición distante, cuando el aislamiento local no puede ser realizado para probar que el circuito está desenergizado.
- El arranque de los equipos deberá realizarse, solamente, después de la cancelación del permiso de trabajo.
- Se recomienda hacer ensayos de arranque de los equipos, teniendo en cuenta todo el ínter bloqueo posible, como última verificación de que se logró el aislamiento; esto debe ser realizado por eléctricos autorizados y competentes.

Todos los trabajos en equipos energizados deben estar respaldados por una evaluación de riesgos o Análisis de seguridad de la tarea en cuestión

TIPOS DE AISLAMIENTO

- ✓ **Aislamiento personal:**

Es permitido que un ejecutante realice sus propios aislamientos sin necesidad de llenar un certificado de confirmación de aislamiento si se cumplen todos los siguientes criterios:

- El trabajo debe ser aprobado como de rutina y bajo riesgo
- El trabajo es completado en el turno de quien ejecuta el trabajo
- Quien hace el aislamiento es certificado para hacer aislamientos locales
- La tarea es ejecutada por quien hace el aislamiento
- Se usa una tarjeta y candado personal para el aislamiento
- Si alguna de los criterios anteriores cambia el ejecutante debe levantar un aislamiento documentado (certificado de aislamiento).

- ✓ **Aislamiento documentado:**

Con certificado de confirmación de aislamiento. Este tipo de aislamiento se debe efectuar si cualquiera de los criterios de aislamiento personal no se cumplen.

PLANEACION *DEL AISLAMIENTO*

Los requerimientos de aislamiento de la planta y del equipo, se deben identificar inicialmente en el ciclo de la planeación del trabajo, de tal manera que se pueda asignar el tiempo adecuado para la preparación de los sistemas o equipos y evaluación de riesgos en caso de que se requiera.

- Llave para removerlo. Puede ser que se requieran dispositivos de inmovilización adicionales bajo ciertas circunstancias.
- Válvulas operadas eléctricamente deben ser físicamente desconectadas de la fuente eléctrica para ser consideradas como válvulas de aislamiento.
- A las válvulas de operación neumática e hidráulica que, por defecto, están cerradas, se les deberán aislar y desconectar físicamente las líneas de suministro.
- Válvulas operadas neumática ó hidráulicamente que fallan abiertas no deben ser consideradas para propósitos de aislamiento; si no hay alternativa práctica su uso debe ser sometido a una evaluación de riesgos aceptada por el gerente local.
- Todos los puntos de aislamiento deben ser identificados con tarjeta personal ó de aislamiento documentado con el número del certificado de aislamiento relacionado.
- Se deberá monitorear el desempeño de los mecanismos de aislamiento a intervalos regulares, para detectar fugas o deterioro causado por vibración o por perturbaciones (o cambios de presión aguas arriba). Dicho monitoreo puede implicar pruebas parciales de aislamientos por válvulas.

METODOS DE AISLAMIENTO

Los aislamientos de procesos y sistemas de servicios o equipos, pueden ser logrados mediante aislamiento positivo, o con válvulas. Este último es requerido para mantener contención, mientras que se está haciendo el aislamiento positivo. En cada punto de aislamiento se deberá aplicar el aislamiento de mayor calidad posible y será determinado por la severidad de los peligros. Los métodos de aislamiento, normalmente disponibles, se enumeran a continuación en orden decreciente de seguridad y efectividad.

7.2. Riesgo eléctrico en uso de equipos de soldadura eléctrica

Es un equipo de trabajo que consiste en un sistema de soldadura caracterizado porque el arco eléctrico generado salta entre la pieza que hay que soldar, conectada a uno de los polos de la fuente de energía, y un electrodo que se encuentra conectado al otro polo. El contacto eléctrico directo puede producirse en el circuito de alimentación por deficiencias de aislamiento en los cables flexibles o las conexiones a la red o a la máquina y en el circuito de soldadura cuando está en vacio (tensión superior a 50V). El contacto eléctrico indirecto puede producirse con la carcasa de la máquina por algún defecto de tensión.

Medidas preventivas:

El riesgo de electrocución en el manejo de este equipo de trabajo es muy importante por lo que se deben tener presentes una serie de medidas preventivas entre las que destacan:

- Equipo de soldar. La máquina de soldar puede protegerse mediante dos sistemas, uno electromecánico que consiste en introducir una resistencia en el primario del transformador de soldadura (resistencia de absorción) para limitar la tensión en el secundario cuando está en vacío y otro electrónico que se basa en limitar la tensión en el secundario del transformador introduciendo un TRIAC en el circuito primario del grupo de soldadura. En ambos casos se consigue una tensión de vacío de 24 V, considerada tensión de seguridad.

- Pinza portaelectrodos. La pinza debe ser adecuada al tipo de electrodo utilizado y que además sujete fuertemente los electrodos. Por otro lado, debe estar bien equilibrada por su cable y fijada al mismo de modo que mantenga un buen contacto. Así mismo, el aislamiento del cable no se debe estropear en el punto de empalme.

- Circuito de acometida. Los cables de alimentación deben de ser de la sección adecuada para no dar lugar a sobrecalentamientos. Su aislamiento será suficiente para una tensión nominal > 1000V. Los bornes de conexión de la máquina y la clavija deben de estar aislados.

- Circuito de soldadura. Los cables del circuito de soldadura al ser más largos deben protegerse contra proyecciones incandescentes, grasas, aceites, etc., para evitar arcos o circuitos irregulares.
- Carcasa. La carcasa debe conectarse a una toma de tierra asociada a un interruptor diferencial que corte la corriente de alimentación en caso de que se produzca una corriente de defecto.
- Se deberá vigilar periódicamente el estado de los cables.
- En trabajos en zona húmeda o mojada la tensión nominal de trabajo no podrá exceder de 50 V en corriente altera o 75 V en corriente continua.
- Si se trabaja con este equipo en zonas con riego especial de incendio, hay que prever la instalación de extintores.
- No se realizarán trabajos de soldadura en locales donde se almacenen materiales combustibles y/o inflamables, así como en el interior de contenedores depósitos o barriles mientas no hayan estado limpiados correctamente y desgasificados.
- No se debe trabajar en condiciones climatológicas adversas.
- Se deben hacer revisiones de mantenimiento a estos equipos.
- Se deben utilizar equipos de protección individual adecuados (pantallas, guantes, mandiles, etc.).

7.3. Riesgo eléctrico en uso de hormigonera eléctrica, sierra circular y tronzadora de material cerámico

La hormigonera es un equipo de trabajo que consiste en un depósito rotatorio donde se mezclan los ingredientes del hormigón: áridos de diferente granolumetría, cemento y agua.

La sierra circular se utiliza en el sector de la construcción para la fabricación de piezas, generalmente de madera, para su utilización en el proceso constructivo. Se trata de un equipo de trabajo muy utilizado por los encofradores y que, normalmente, se encuentra a la intemperie.

La tronzadora de material cerámico es un equipo de trabajo utilizado para cortar las diferentes piezas cerámicas que posteriormente se utilizarán en los cerramientos, y chapados de diferentes estructuras.

El riesgo eléctrico de estos equipos de trabajo deriva de que su alimentación es, generalmente, eléctrica y que en la realización durante su manejo están expuestos, directa o indirectamente, al contacto con el agua.

Medidas preventivas:

- Se evitarán la presencia de cables por el suelo con el fin de evitar su deterioro y un posterior contacto eléctrico directo por parte de los trabajadores.
- La conexión de la alimentación eléctrica debe hacerse con cable antihumedad.
- Se recomienda paralizar los trabajos en caso de lluvia y cubrir la máquina con material impermeable. Una vez finalizado el trabajo, colocarla en un lugar abrigado
- Se verificará, periódicamente, el correcto estado de la toma de tierra.
- Se conectarán todas las masas a tierra o se establecerá otra medida de protección adecuada para evitar los contactos eléctricos indirectos.

7.4. Riesgo eléctrico en uso de máquinas portátiles de alimentación eléctrica

En este apartado podríamos englobar, entre otras, las máquinas siguientes:

- Amoladora angular.
- Martillo electro neumático.
- Motosierra de cinta o de cadena.
- Pulidora.
- Cortadora de disco manual.
- Cortadora de pavimento eléctrica.

• Y en general cualquier otra máquina de alimentación eléctrica.

Medidas preventivas:

El objetivo es evitar que se puedan producir contactos con partes activas, es decir, con partes que normalmente están en tensión (contacto directo) o con partes que se han puesto en tensión accidentalmente, en general debido a un fallo de aislamiento (contacto indirecto).

- En todas las partes en tensión debe existir protección contra contactos directos, mediante alejamiento, interposición de obstáculos y aislamiento.
- Separación de circuitos, Empleo de pequeñas tensiones de seguridad, separación entre las partes activas y las masas accesibles por medio de aislamientos de protección.
- Se deberá tener especial atención al buen estado de funcionamiento de estas máquinas, por lo que deberán someterse a un correcto proceso de mantenimiento, realizándose de acuerdo con las instrucciones del fabricante.
- En el caso de trabajar con determinadas máquinas en espacios confinados húmedos o mojados, dichas maquinas serán de Clase II o sea de doble aislamiento.
- Deberá impartirse la necesaria y obligatoria información y formación a los trabajadores.

7.5. Recomendaciones de seguridad para instalaciones permanentes y provisionales

- Todas las instalaciones permanentes o provisionales deben dimensionarse y protegerse adecuadamente bajo las normas de seguridad y operación por los códigos eléctricos aplicables.
- Los tableros eléctricos y la acometida deben ser diseñados y construidos bajo las exigencias del ambiente y las condiciones de la intemperie para garantizar no sólo la seguridad de la instalación sino de su entorno.
- Los tableros eléctricos principales, secundarios y de distribución deberán cumplir con las condiciones de seguridad y las exigencias de la instalación durante las diversas fases de la obra, estarán conectados a tierra de acuerdo a las disposiciones normativas aplicables.
- El sistema de tableros y acometida eléctrica de distribución, deberá evitar el contacto y paso por zonas húmedas, procurando estar aislados del piso para el caso de los tableros y para el caso de instalaciones de cableado provisional. Estos deberán estar protegidos con un equipo extintor.
- Toda instalación deberá contar con el diseño aprobado, sus componentes certificados y dimensionados por personal competente de acuerdo a exigencias establecidas en el código eléctrico en cuanto a fusibles principales y de distribución, equipos e instalaciones de distribución, interruptores, tomas corrientes, instalaciones de puesta a tierra, etc.
- Siempre que sea posible, la instalación se realizará de forma aérea y para los casos en que sea necesario el contacto con el piso, el sistema de acometidas deberá ser encauchetado, resguardado y protegido; así como señalizado. Se recomienda sistema portacables a través de distribución de bandejas.

- De forma frecuente personal certificado y entrenado deberán inspeccionar las instalaciones temporales realizando mantenimientos regulares.
- Los toma corriente deberán estar instalados de acuerdo a las condiciones ambientales del lugar con el grado de protección adecuado y cumpliendo los mínimos requeridos por la norma.
- Todo sistema provisional deberá contar con la señalización eléctrica y seguridad exigida por la normatividad colombiana.

7.6. *Recomendaciones de seguridad para* operación

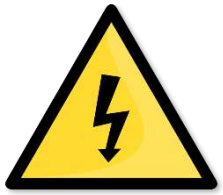
- Siempre que se ejecute una intervención a equipos alimentados de forma eléctrica, recuerde realizar el paso a paso de control de energías peligrosas (bloqueo y etiquetado) y verificar el sistema eléctrico a través de las **5 REGLAS DE ORO**, que son:

*Fuente: Alberto-gm.blogspot.com

- Trabaje en frío, no realice conexiones eléctricas ni cualquier tipo de intervención con sistemas energizados.
- Antes de cualquier intervención, se debe suponer que el sistema se encuentra energizado; verifique y realice el proceso de validación para demostrar lo contrario.

- Inspecciones de forma permanente y realice correcciones de las condiciones peligrosas del área de trabajo, por ejemplo: cables con aislamiento roto, enchufes sin o con el polo a tierra roto, electricidad estática, herramientas sin aislamiento, fusibles con puentes.
- Recuerde que toda herramienta eléctrica debe ser inspeccionada y valido su funcionamiento.
- No realice operaciones cerca de una fuente de electricidad, tableros y/o acometidas si usted y su vestuario, entorno o herramientas están húmedos.
- Verifique las condiciones ambientales del lugar de instalación de los equipos y sistemas de acometidas eléctricas, asegúrese que no existen atmósferas combustibles, polvos o vapores inflamables.
- Si la iluminación es deficiente, instale lámparas auxiliares de acuerdo al estándar eléctrico.
- No utilice accesorios como relojes, anillos, elementos metálicos, aretes, correas, cremalleras o cualquier otro tipo de elementos conductor o metálico cuando realice intervenciones en sistemas eléctricos.
- Todos los elementos de protección personal deberán ser de tipo dieléctrico, verifique que cumplan con las características de aislamiento necesarias.
- Herramientas y equipos de trabajo eléctrico, deberán ser aisladas y durante la operación se debe procurar no realizar contacto entre fases. Nunca trate de aislar herramientas con cintas, telas, espumas, etc. El aislamiento de los mangos debe ser diseñado de fábrica para una carga de corriente determinada.
- Debe conocer las condiciones de operación, voltaje y corriente y seleccionar las herramientas, equipos de medición y elementos de protección personal adecuados.
- Antes de realizar cualquier tipo de modificación a una acometida eléctrica o de realizar cualquier de instalación, verifique las condiciones y capacidades de diseño; recuerde que no debe sobrecargar los circuitos eléctricos con equipos de alta resistencia o con tomas múltiples.
- Equipos de trabajo tales como escaleras, deberán cumplir con las condiciones de aislamiento. No utilice escaleras metálicas cuando se van a afectar sistemas energizados o se encuentra cerca de estos (distancia de seguridad).
- Tenga en cuenta siempre que realice una intervención, las distancias de seguridad recomendadas por la normatividad vigente.
- No transporte tubos, regletas o escaleras metálicas en posición vertical, el metal puede hacer contacto con líneas aéreas energizadas. Verifique el área de desplazamiento antes de desplazarse.
- Recuerde que baja tensión NO es sinónimo de bajo riesgo eléctrico.
- Verifique en todo momento que los sistemas eléctricos se encuentren con sistemas de circuito de falla a tierra en todas las líneas eléctricas temporales y extensiones eléctricas.
- Cuando sea necesario accionar o manipular sistemas de control de energía eléctrica (tacos) ubíquese de lado y manipule con el brazo para evitar que, en caso de corto, genere afectación directa.
- Antes de cualquier intervención realice estudio de riesgos y verifique los planos y unifilares del sistema.
- En ocasiones es requerido el uso de mano de obra no especializada en electricidad; en tal caso se deberá realizar la evaluación de riesgos respectiva, junto con el dueño del área y el residente de obra, donde se determinarán los riesgos asociados a la tarea, los controles necesarios para garantizar la seguridad de la operación y se acordará el uso de elementos de

protección personal y colectivos, la señalización de las áreas de peligro, instalación de barreras, cercas o acordonamiento, trazo y disposición de caminos de acceso, tránsito de personas y vehículos; así como la evaluación de operaciones simultaneas.



- Todo personal especializado en operaciones eléctricas, deberá conocer, estar entrenado y capacitado en el método de reanimación cardiopulmonar asistiendo a los cursos de primeros auxilios, recuerde que el conocimiento de este método puede salvar vidas.
- Se debe firmar el correspondiente permiso de trabajo de riesgo eléctrico establecido por la empresa y al cierre del mismo, se debe dejar el área en óptimas condiciones de orden y aseo.

8. SEÑALIZACIÓN Y DELIMITACION DE LA ZONA DE TRABAJO

Es la operación de indicar mediante carteles con frases o símbolos el mensaje que debe cumplirse para prevenir el riesgo de accidente. Se debe señalizar desde el inicio hasta el final de la actividad.

El área de trabajo debe ser delimitada por vallas, manilas o bandas reflectivas. En trabajos nocturnos se deben utilizar conos o vallas fluorescentes y además señales luminosas.

Cuando se trabaje sobre vías que no permitan el bloqueo del tránsito, se debe parquear el vehículo de la cuadrilla atrás del área de trabajo y señalizar en ambos lados de la vía.

	Señal de peligro de riesgo eléctrico, adecuada para indicar peligro por descarga eléctrica en cercanía de cuadros eléctricos, maquinaria, cableado, etc. Es de forma triangular, con pictograma de color negro sobre fondo amarillo.
	Uso obligatorio de elementos de protección personal riesgo eléctrico.

9. REQUISITOS PARA EL PERSONAL QUE REALIZA TRABAJO ELECTRICO

De acuerdo con lo establecido en el RETIE ARTICULO 10, numeral 10.1.1 Competencia de las personas naturales: El diseño, construcción, ampliación, modificación, remodelación e inspección de toda instalación eléctrica; así como la operación, mantenimiento y cualquier intervención o manipulación de la instalación o sus equipos debe ser dirigida, supervisada y ejecutada por personas técnica y legalmente competentes: Ingenieros electricistas, electromecánicos, de distribución y redes eléctricas. Tecnólogos en electricidad o en electromecánica, tecnólogos en sistemas eléctricos de media y baja tensión, tecnólogos en mantenimiento eléctrico; técnicos electricistas. Lo anterior, según aplique cada una de las obras.

Tener certificado de competencia laboral en trabajo en tensión expedido por una entidad acreditada por el ONAC (Organismo Nacional de Acreditación de Colombia).

Recibir formación, capacitación y entrenamiento en asuntos de seguridad y salud en el trabajo general y relacionada con el riesgo eléctrico.

Si se emplea personal no electricista el responsable del trabajo hará un reconocimiento del área donde se realizarán los trabajos y se dará capacitación frente a:

- Identificación e intervención de los peligros eléctricos.
- Medidas de seguridad que se adoptarán, tales como utilización de EPP y colectivos, señalización de áreas de peligro, instalación de barreras, cercas o acordonamiento.
- Informar sobre los peligros a los cuales va a estar expuesto y los controles respectivos, verificando su comprensión.

Recomendaciones médicas:

- No tener dispositivos metálicos implantados como marcapasos cardiacos, implantes ferromagnéticos y dispositivos electrónicos implantados.
- Tener examen médico de ingreso como apto para el trabajo a realizar.

10. EQUIPO DE SEGURIDAD A UTILIZAR

- Casco Dieléctrico.
- Guantes Dieléctricos.
- Botas de cuero Dieléctricas.
- Ropa de labor confeccionada en 100% algodón y sin accesorios metálicos.
- Alicates y herramientas aisladas.
- Gafas de seguridad.

11. ATENCION EN CASO DE EMERGENCIA

Recomendaciones a seguir en caso de electrocución.

	Cualquiera que sea la causa del accidente eléctrico, nunca toques al accidentado con las manos al desnudo a menos que estés absolutamente seguro de que no existe peligro para ti	
Tratamiento		1. Desconecta el aparato eléctrico supuestamente causante de la electrocución o extrae el fusible.
		2. Retira al accidentado del contacto eléctrico usando materiales no conductores tales como palos de madera, ropa seca, etc.
		3. Pide ayuda.
		4. Si la respiración y el pulso se han detenido, se DEBEN COMENZAR LAS TÉCNICAS DE REANIMACIÓN.

PROGRAMA DE PREVENCIÓN Y PROTECCION CONTRA CAÍDAS POR TRABAJOS EN ALTURA	GRU SAS GESTIÓN RURAL Y URBANA SAS
	PG-SST-08 02

Introducción

Acorde a lo establecido en el marco legal de la Resolución 4272 de 2021 las actividades de trabajo en alturas son consideradas como una de las tareas de alto riesgo, acorde a las estadísticas de frecuencia y severidad en accidentalidad. El costo de un accidente de trabajo, que de por si es alto para la empresa en términos de productividad, imagen corporativa y credibilidad, se incrementa considerablemente en relación a la ocurrencia de accidentes por trabajos en altura, dadas las consecuencias posibles que este tipo de eventos.

El Programa de Protección Contra Caídas es una de las obligaciones que tiene el empleador enrelación con la preservación y el cuidado de la salud de sus trabajadores, con el fin de evitar accidentes de esta naturaleza.

Para la elaboración del programa de prevención y protección contra caídas, se tuvo en cuenta el inventario de tareas que se realizan con el riesgo de caer a una distancia de 2 metros o más sobre un nivel inferior y la identificación de riesgos para distancias menores tal cual se indica en la normatividad. Una vez identificadas las actividades se identificaron las medidas de seguridad que seimplementarán en cada uno de los proyectos.

La implementación del programa requiere del compromiso desde la alta dirección para la asignaciónde recursos, el apoyo de los líderes y coordinadores verificando que se cumplan cada una de las medidas de seguridad, la designación de un coordinador del programa de prevención y protección contra caídas para el seguimiento a las actividades, un coordinador y ayudante para avalar los permisos de trabajo y garantizar que las actividades se realicen de manera segura y de cada uno de los trabajadores o contratistas autorizados para realizar trabajos en altura cumpliendo con cada unade las normas establecidas en el presente documento.

GESTION RURAL Y URBANA SAS., con su gerente a la cabeza, es cada vez más consciente queel talento humano es su recurso más valioso y que se constituye en una parte fundamental de suproceso constructivo y urbanístico, por tanto ha realizado el presente PROGRAMA DE PREVENCIÓN Y PROTECCIÓN CONTRA CAÍDAS para trabajo seguro en alturas con el fin de diseñar y establecer las medidas de seguridad que se implementarán para realizar trabajos en altura, con el propósito de controlar los riesgos que se presenten en la ejecución de esta actividad.

En una actividad como son los trabajos en altura en donde el trabajador debe enfrentarse constantemente al riesgo de caída, se hace necesario implementar los más altos estándares de seguridad para desarrollar la actividad protegiendo al trabajador de todo riesgo.

Definiciones:

A continuación se relacionan los términos establecidos en la resolución 4272 de 2021:

Absorbedor de energía: Equipo que hace parte integral de un sistema de detención de caídas,cuya función es disminuir y limitar las fuerzas de impacto en el cuerpo del trabajador o en los puntos de anclaje en el momento de una caída.

Actividad o tarea no rutinaria: Actividad que no forma parte de la operación normal de la organización o actividad que la organización ha determinado como no rutinaria por su baja frecuencia de ejecución.

Actividad o tarea rutinaria: Actividad que forma parte de la operación normal de la organización, se ha planificado y es estandarizable.

Ayudante de seguridad: Trabajador autorizado, debidamente certificado, designado por el empleador para revisar las condiciones de seguridad en el sitio de trabajo y controlar el acceso a lasáreas de riesgo de caída de objetos o personas.

Certificación del proceso de capacitación y entrenamiento: Documento expedido por el oferente de capacitación y entrenamiento al final del proceso formativo en el que se da constanciaque una persona cursó y aprobó la capacitación y entrenamiento necesario para desempeñar una actividad laboral en TA. Este documento será propiedad del trabajador como constancia de los conocimientos, y desarrollado por el oferente.

Coordinador de trabajo en alturas: Trabajador designado por el empleador, capaz de identificar peligros en el sitio en donde se realiza trabajo en alturas, que tiene autorización para aplicar medidas correctivas inmediatas para controlar los riesgos asociados a dichos peligros. La designación del coordinador de TA no significa la creación de un nuevo cargo, ni aumento en la nómina de la empresa, esta función debe ser llevada a cabo por la persona designada por el empleador y puede ser ejecutada por supervisores o coordinadores de procesos, por el coordinador o ejecutor delSistema de Gestión de Seguridad y Salud en el Trabajo o cualquier otro trabajador que el empleadorconsidere adecuado para cumplir sus funciones.

Equipo certificado: Todo equipo utilizado en protección contra caídas, debe contar como mínimo con un certificado de conformidad de producto expedido por el fabricante.

Factor de seguridad: Número entero multiplicador mayor que uno (1) de la carga real aplicada a un elemento, para determinar la carga a utilizar en el diseño.

[1] https://safetya.co/wp-content/uploads/2022/01/resolucion-4272-de-2021.pdf

Máxima fuerza de detención, MFD: La máxima fuerza que puede soportar el trabajador sin sufrir una lesión, es 1.800 libras (8 kilo newtons — 816 kg).

Medidas activas de protección contra caídas: Son las que involucran la participación deltrabajador. Incluyen los siguientes componentes: punto de anclaje, mecanismos de anclaje, conectores, arnés de cuerpo completo y plan de rescate.

Medidas colectivas de prevención: Todas aquellas actividades dirigidas a informar o demarcar la zona de peligro y evitar una caída de alturas o ser lesionado por objetos que caigan. Estas medidas, previenen el acercamiento de los trabajadores o de terceros a las zonas de peligro de caídas de personas o de objetos; sirven como barreras informativas y corresponden a medidas de control en el medio.

Medidas de prevención contra caídas: Conjunto de acciones individuales o colectivas que se implementan para advertir o evitar la caída de personas y objetos cuando se realizan trabajos en alturas y forman parte de las medidas de control. Dentro de las medidas de prevención contra caídas de trabajo en alturas están la capacitación, los procedimientos, el entrenamiento, la aptitud psicofísica, la vigilancia en salud laboral, los sistemas de ingeniería para prevención de caídas, medidas colectivas de prevención, permiso de trabajo en alturas, listas de chequeo, los análisis de peligros yotros que el administrador del programa o el coordinador de trabajo en alturas establezca comonecesarios para aumentar la efectividad del programa y la eficacia de los controles.

Medidas pasivas de protección contra caídas: Están diseñadas para detener o capturar altrabajador en el trayecto de su caída, sin permitir impacto contra estructuras o elementos, requieren poca o ninguna intervención del trabajador que realiza el trabajo.

Permiso de trabajo en alturas: Mecanismo administrativo que, mediante la verificación y control previo de todos los aspectos relacionados en la presente resolución, tiene como objeto fomentar laprevención durante la realización de trabajos en alturas.

Persona calificada: Según las disposiciones establecidas en la Ley 400 de 1997 relacionado con los profesionales a cargo o la norma que la modifique o sustituya.

Programa de prevención y protección contra caídas en alturas: Es la planeación, organización, ejecución y evaluación de las actividades identificadas por el empleador como necesarias de implementar en los sitios de trabajo en forma integral e interdisciplinaria, para prevenir la ocurrencia de accidentes y enfermedades laborales por trabajo en alturas y llegado el caso las medidas de protección implementadas para detener la caída una vez ocurra o mitigar sus consecuencias.

Requerimiento de claridad o espacio libre de caída: Distancia vertical requerida por untrabajador en caso de una caída, para evitar que este impacte contra el suelo o contra un obstáculo.

El requerimiento de claridad dependerá principalmente de la configuración del sistema de detención de caídas utilizado.

Sistemas de protección de caídas: Sistema con un conjunto de elementos, anclajes y/o equipos certificados,

que el empleador dispone para que el trabajador autorizado use para su protección ante una caída y el cual garantiza que reduce las fuerzas sobre el cuerpo al máximo permitido yaprobado por una persona calificada. En ningún momento, el estándar internacional puede ser menosexigente que el nacional.

Trabajador autorizado: Trabajador que ha sido designado por la organización para realizar trabajos en alturas, cuya salud fue evaluada y se le consideró apto para trabajo en alturas y que posee la constancia de capacitación y entrenamiento de trabajo en alturas o el certificado de competencialaboral para trabajo en alturas.

Trabajo en alturas: Toda actividad que realiza un trabajador que ocasione la suspensión y/o desplazamiento, en el que se vea expuesto a un riesgo de caída, mayor a 2.0 metros, con relación del plano de los pies del trabajador al plano horizontal inferior más cercano a él.

Marco Normativo

Para el presente documento se define el siguiente marco normativo legal:

NORMA	AÑO	TITULO
Resolución 4272	2021	Por la cual se establecen los requisitos mínimos de seguridad para el desarrollo de trabajo enalturas.
Resolución 2346	2007	Por la cual se regula la práctica de evaluaciones médicas ocupacionalesy el manejo y contenido de las historias clínicas ocupacionales.
Resolución 1918	2009	Por la cual se Modifican los artículos 11 y 17 de la Resolución 2346 de2007 y se dictan otras disposiciones.
Decreto 723	2013	Por el cual se reglamenta la afiliación al Sistema General de Riesgos Laborales de las personas vinculadas a través de un contrato formal de prestación de servicios con entidades o instituciones públicas o privadas y de los trabajadores independientes que laboren en actividades de alto riesgo y se dictan otras disposiciones.
Decreto 1072	2015	Por medio del cual se expide el Decreto Único Reglamentario delSector Trabajo

Normas Técnicas:

NORMA	TITULO
ANSI Z359.1	Requisitos de Seguridad para los Sistemas Personales, Subsistemas y Componentes para Detención de Caídas
ANSI Z359.2	Requisitos Mínimos para un Programa Administrado Completo de Protección Contra Caídas.
ANSI Z359.3	Requisitos de Seguridad para Sistemas de Posicionamiento y Restricción de desplazamiento.

ANSI Z359.4	Requisitos de Seguridad para Sistemas, Subsistemas y Componentes para Rescate Asistido y Auto-rescate
ANSI Z359.6	Especificaciones y requisitos de diseño de sistemas de protección activa de caídas
ANSI Z359.7	Calificación y prueba de verificación de los productos de protección contra caídas
ANSI Z359.11	Arneses.
ANSI Z359.12	Conexión de componentes para sistemas personales de detención de caídas
ANSI Z359.13	Adsorbentes personales de energía y eslingas adsorbentes de energía
ANSI Z359.15	Líneas de vida verticales.
OSHA 29 CFR 1926	Subparte M Protección Contra Caídas
OSHA 29 CFR 1926	Subparte L Andamios.
OSHA 29 CFR 1926	Subparte X Escaleras.

1. OBJETIVOS

1.1. Objetivo general

Prevenir y proteger a trabajadores, contratistas y subcontratistas de los peligros y riesgos de las caídas a diferente nivel durante el desarrollo de trabajos en alturas o aquellos que implique el acceso y/o desplazamiento a 2 metros o más sobre un nivel inferior, mediante la implementación de medidas de prevención y protección determinadas en el presente programa.

1.2. Objetivos Específicos

- Establecer el inventario de actividades realizadas para trabajo seguro en altura.
- Reconocer los diferentes sistemas y elementos de protección personal con los que cuenta la empresa.
- Definir las medidas preventivas y de protección para el trabajo en alturas.
- Cumplir con la normatividad en seguridad para protección contra caídas en trabajo en alturas.

2. ALCANCE

Aplica para todo trabajo que tenga riesgo de caída de alturas a partir de 2 metros o sobre un nivel inferior, en todos los centros de trabajo (oficinas, obras) de GESTION RURAL Y URBANA SAS.

3. RESPONSABILIDADES

RESPONSABILIDADES GERENCIA:

- Asegurar la disponibilidad de los recursos necesarios (humano, tecnológico y financiero) para el funcionamiento y óptimo desarrollo del Programa.
- Garantizar el cumplimiento de los requisitos legales en materia de Seguridad y Salud en el trabajo aplicables al trabajo en alturas en la empresa.
- Disponer de un administrador del programa de TA, coordinador de trabajo en alturas, de trabajadores autorizados en el nivel requerido y de ser necesario, un ayudante de seguridad según corresponda a la tarea a realizarse; lo cual no significa la creación de nuevos cargos sino la designación de trabajadores a estas funciones.
- Garantizar que el suministro de equipos, la capacitación y el reentrenamiento, incluido el tiempo para recibir estos dos últimos, no generen costo alguno para el trabajador.
- Garantizar la operatividad de un programa de inspección, conforme a las disposiciones del SG SST de la empresa.

RESPONSABILIDADES DEL ADMINISTRADOR DEL PROGRAMA DE PREVENCIÓN Y PROTECCIÓN CONTRA CAÍDAS - PROFESIONAL SST:

- Diseñar, administrar y asegurar el programa de prevención y protección contra caídas
- Asegurar la adopción de medidas eficaces que garanticen la participación de todos los trabajadores de la empresa en el desarrollo del Programa.
- Garantizar que los sistemas y equipos de protección contra caídas adquiridos por la empresa cumplan con los requerimientos de seguridad exigidos.
- Garantizar la aplicación de todos los procedimientos requeridos para el desarrollo del Programa de Prevención y Protección Contra Caídas.
- Socializar e implementar el Programa de Prevención y Protección Contra Caídas en la empresa.
- Garantizar que el personal que realiza trabajos en alturas cuente con el examen médico de aptitud física que lo habilita para tal fin.
- Asegurar que se investiguen los incidentes y accidentes de trabajo en alturas, tomando las medidas del caso para evitar su repetición.
- Indicar acciones correctivas para mejorar aspectos débiles identificados en el programa de prevención y protección contra caídas.
- Asegurar la aplicación de la normatividad vigente establecida para trabajo en alturas.
- Dar cumplimiento a los indicadores propuestos en el Programa de Prevención y Protección Contra Caídas.
- Asegurar que los trabajadores, contratistas cumplan con los requisitos exigidos en el Programa de Prevención y Protección Contra Caídas.
- Mantener actualizado el Programa de Prevención y Protección Contra Caídas.
- Identificar las actividades y personal que realiza trabajo en alturas en la empresa.

- Velar por el cumplimiento de las responsabilidades establecidas en el Programa de Prevención y Protección Contra Caídas y hacer las recomendaciones necesarias para contribuir a la minimización de los riesgos de actividades que se desarrollen en alturas.
- Realizar inspecciones con el fin de garantizar el funcionamiento de los equipos y sistemas de protección contra caídas, por parte de una persona calificada y/o competente por medio de visitas no programadas de forma aleatoria a las actividades que desarrollan los trabajadores que realizan trabajo en altura y hacen parte de este programa para verificar y evaluar las condiciones de su desarrollo.
- Reportar a su respectiva ARL, el nombre, documento de identidad de los trabajadores reentrenados, fecha del reentrenamiento y el oferente de capacitación y entrenamiento.
- Solicitar la documentación correspondiente al personal autorizado, certificación de equipos y demás documentos de soporte técnico utilizados para trabajo en alturas:

  a) Programa de prevención y protección contra caídas.
  b) Certificación de equipos y mecanismos de acceso.
  c) Certificado del personal responsable de las operaciones, coordinador para trabajo seguro en alturas.
  d) Procedimientos de operación segura, actividades y mecanismos de acceso. (Ats o Permiso de trabajo en alturas)
  e) Plan de emergencias, técnicas de rescate, recursos y personal entrenado para tal fin.
  f) Otros según se consideren necesarios para garantizar la seguridad en la operación.

RESPONSABILIDADES PERSONA CALIFICADA:

- Calcular resistencia de materiales, diseñar, analizar, evaluar, autorizar puntos de anclaje y/o estructuras para protección contra caídas.

RESPONSABILIDADES DEL COORDINADOR DE TRABAJO SEGURO EN ALTURAS:

- Identificar peligros en el sitio en donde se realiza trabajo en alturas.
- Aplicar medidas correctivas inmediatas para controlar los riesgos. asociados a dichos peligros.
- Verificar que la seguridad social se encuentre vigente.
- Identificar y verificar las condiciones de seguridad de trabajos en altura, para garantizar medidas preventivas en la labor a desarrollar.
- Diligenciar el Permiso de Trabajo en Alturas, análisis de trabajo seguro, preoperacionales de equipos y sistemas de acceso
- Realizar actividades generales de control de riesgos de trabajo en alturas.
- Implementar medidas de prevención y protección contra caídas para trabajo en alturas de acuerdo con la tarea a realizar y normatividad vigente.
- Verificar el funcionamiento de los equipos y sistemas de protección contra caídas y de cualquier condición que pueda afectar la seguridad del personal que ejecuta la actividad en alturas
- Verificar la instalación segura de líneas de vida y de trabajo.

- Verificar la compatibilidad de los componentes del sistema de protección contra caídas.
- Inspeccionar los sistemas de acceso para trabajo seguro en alturas.
- Inspeccionar y avalar el montaje y operación de todo sistema de acceso para trabajo enalturas y de los sistemas de prevención y protección contra caídas.
- Recibir el reporte de daño o deterioro de los sistemas de prevención y protección contracaídas.
- Garantizar el montaje y buen funcionamiento de los sistemas de acceso que seanseleccionados para realizar las actividades de trabajo en alturas.
- Seleccionar los sistemas de protección contra caídas de acuerdo a los riesgos valorados por el mismo, antes de iniciar las actividades de alturas.
- Asignar un ayudante de seguridad para trabajos en altura

RESPONSABILIDADES DEL AYUDANTE DE TRABAJOS EN ALTURA:

- Es el encargado de hacer cumplir que se mantengan las condiciones de seguridad en elsitio de trabajo para controlar el las áreas de riesgo de caída de objetos o personas.
- Identificar y verificar las condiciones de seguridad de trabajos en altura, para garantizar medidas preventivas en la labor a desarrollar.
- Realizar actividades generales de control de riesgos de trabajo en alturas.
- Implementar medidas de prevención y protección contra caídas para trabajo en alturas deacuerdo con la tarea a realizar y normatividad vigente.
- Inspeccionar áreas en las que se ejecutaran las actividades.
- Reportar al coordinador de trabajo en alturas el daño o deterioro de sistemas de ingeniería, equipos, medidas de prevención o protección empleadas en el trabajo en alturas.
- Dar aviso de cualquier situación de emergencia, según plan de rescate.

RESPONSABILIDADES DE LOS TRABAJADORES Y CONTRATISTAS QUEREALIZAN TRABAJOS EN ALTURA:

- Cumplir todos los lineamientos establecidos en el Programa de Prevención y Protección Contra Caídas
- Verificar que la seguridad social se encuentre vigente.
- Presentar copia de los certificados para trabajo en alturas.
- Asistir y aprobar a las capacitaciones y reentrenamientos programados
- Realizar reentrenamiento obligatorio, contando 365 días a partir del certificado inmediatamente anterior.
- Presentar los exámenes médicos de la evaluación de las condiciones de aptitud psicofísica necesarias para realizar trabajos en alturas no mayor a un año y los mismos se deben renovaren el mismo tiempo contado a partir del primer certificado o examen.
- Participar en la elaboración y el diligenciamiento del Permiso de Trabajo en Alturas, Análisis de Seguridad en el Trabajo y preoperacionales de equipos y sistemas de acceso.
- Atender las indicaciones del Coordinador de Trabajo en Alturas.

- Utilizar las medidas de prevención y protección contra caídas que sean implementadas.
- Conocer los Planes de Rescate de cada procedimiento donde se realice trabajo en alturas.
- Utilizar, dar buen uso y mantenimiento a los elementos de protección personal y equipos de protección contra caídas que la empresa le suministre.
- Reportar al Coordinador de Trabajo en Alturas el deterioro o daño de los sistemas individuales o colectivos de prevención y protección contra caídas.
- Detectar condiciones y prácticas inseguras en los trabajos de alturas e informar inmediatamente al supervisor o jefe inmediato, y tomar acción inmediata si el caso lo amerita.
- Reportar los incidentes, accidentes de trabajo, actos y/o condiciones inseguras relacionadoscon el trabajo en alturas.
- Participar en la investigación de los incidentes y accidentes de trabajo.
- Participar activamente en las actividades de formación, capacitación o entrenamiento determinadas por la para el desarrollo de trabajo seguro en alturas.
- Informar al Supervisor, coordinador de alturas o Jefe Inmediato las restricciones médicas derivadas por enfermedades comunes o laborales que justifique la no realización de la laborantes de iniciar cualquier tipo de trabajo en alturas.
- Cumplir con todos los parámetros, normas, reglamentos y procedimientos de seguridad y salud en el trabajo establecidos por empresa, asumiendo un papel activo para su propia protección.
- Cumplir con el desarrollo de verificaciones e inspecciones de seguridad que el área de
- Seguridad y Salud en el Trabajo debe ejercer sobre los elementos de protección personal ydesarrollo de trabajo en condiciones seguras.
- Conocer los peligros y controles que se han definido para realizar el trabajo en altura, así como las acciones requeridas en caso de emergencia.
- Garantizar su seguridad y salud y la de otras personas que puedan verse afectadas por sus actos u omisiones en el trabajo.

RESPONSABILIDADES DE LOS LÍDERES DE PROCESO:

- Suministrar, en el sitio, todos los elementos de protección personal, sistemas de acceso, equipos de prevención y protección contra caídas y demás que sean necesarios para ejecutar los trabajos en altura, en cantidad suficiente.
- Conservar las medidas de prevención, los sistemas de acceso y las medidas de protección en buenas condiciones de almacenamiento, orden y aseo.
- Constatar que los equipos y sistemas a utilizar para la prevención y protección contra caídas sean inspeccionados y que se les realice los respectivos mantenimientos al menos una vez al año, o con la periodicidad indicada por el fabricante.
- Planear las actividades con trabajo en altura de manera anticipada para facilitar el alistamiento oportuno de todas las medidas necesarias.
- Informar oportunamente al área de SST si se identifica la necesidad de realizar alguna actualización o ajuste en los procedimientos de trabajo en altura. En ningún caso los jefes de área o líderes de proceso deben cambiar los procedimientos de seguridad por cuenta propia.

RESPONSABILIDADES DEL ÁREA DE COMPRAS:

- Conocer el programa de prevención y protección contra caídas en alturas de la empresa y los requerimientos frente a equipos.
- Conocer y dar cumplimiento a todos y cada uno de los requerimientos y anexos en SST referentes a trabajo en alturas exigidos en el manual de contratistas.

- Solicitar la documentación correspondiente a los proveedores: certificación de equipos en la compra y en inspección de los mismos.

RESPONSABILIDADES DE LA BRIGADA DE EMERGENCIAS:

- Incluir dentro del Plan de prevención, preparación y respuesta ante emergencias, procedimientos operativos para las emergencias que se puedan presentar durante los trabajos en altura, especialmente para rescate en alturas; así mismo, incluir los respectivos elementos, equipos y sistemas necesarios para llevarlos a cabo.
- Incluir dentro del programa de capacitación y entrenamiento de la brigada, sesiones específicas relacionadas con el manejo de las emergencias que se puedan presentar durante los trabajos en altura.
- Realizar prácticas y simulacros específicos para los procedimientos operativos relacionados con la atención de emergencias que se puedan presentar durante las actividades en altura y documentarlos.

4. MARCO CONCEPTUAL

Un programa de prevención y protección define las medidas de seguridad requeridas para realizar un trabajo en alturas de manera segura. Dentro de controles de seguridad se incluyen medidas en la fuente, medio e individuo de los peligros identificados para las actividades a realizar, el marco normativo define la siguiente clasificación:

- **MEDIDAS DE PREVENCIÓN CONTRA CAÍDAS EN ALTURAS**
  - Capacitación y entrenamiento
  - Sistemas de ingeniería para prevención de caídas
  - Medidas colectivas de prevención
  - Procedimientos
  - Permiso de trabajo en alturas y Análisis de trabajo seguro

- **SISTEMAS DE ACCESO Y DE TRABAJO**
  - Sistemas de acceso para trabajo en alturas
  - Escaleras verticales fijas
  - Uso de estructuras modulares de acceso para trabajo en alturas
  - Trabajo en suspensión

- **OTROS SISTEMAS**
  - Sistemas de restricción
  - Sistemas de posicionamiento

- **MEDIDAS DE PROTECCIÓN CONTRA CAÍDAS EN ALTURAS**
  - Medidas de protección contra caídas en alturas
  - Elementos de protección personal para trabajo en alturas
  - Medidas para evitar la caída de objetos
  - Plan de emergencias

A continuación, se mencionan los principios generales del trabajo en alturas:

El trabajo en alturas está considerado como de alto riesgo debido a que en las estadísticas nacionales, es una de las primeras causas de accidentalidad y de muerte en el trabajo, muchos son los accidentes fatales ocurridos a personas cuyo trabajo se desarrolla en alturas, y todos se hubieran podido evitar aplicando la planeación, organización, ejecución, control y evaluación de actividades para su intervención, haciendo uso adecuado de los elementos de protección personal y cumpliendo con lasnormas de seguridad.

Se entenderá por trabajo en alturas, toda labor o desplazamiento que se realicea 2 metros o más sobre un nivel inferior. De este modo, la Resolución 4272 de 2021, expedida por el Ministerio de Trabajo mediante la cual se establecen "los requisitos mínimos de seguridad para el desarrollo de trabajo en alturas"; por tanto, este se debe evidenciar en la adopción de un Programa deprevención y protección contra caídas en alturas inmerso en el Sistema de Gestión de la Seguridad y Salud en el Trabajo (SGSST).

A continuación, se mencionaran aspectos relevantes tomados de la guía de prevención Seguridad realizada por Osalan, en la cual se menciona que"Síndrome de Compresión También conocido como síndrome orto estático o de aplastamiento, esun conjunto de síntomas que aparecen cuando una persona está colgada durante un periodo largo de tiempo de un arnés. Las cintas del mismo actúan como torniquete impidiendo total o parcialmente el paso de sangre con oxígeno a las extremidades. Si una persona queda suspendida inmóvil en un arnés, la presión de este puede contribuir a un flujo sanguíneo insuficiente en algunaspartes del cuerpo generándose toxinas. Cuando la sangre vuelve al torrente sanguíneo y a órganos vitales como los riñones, se produce un fallo renal, con posibilidad de posterior fallo cardiaco o unfallo cardiaco directo debidos a las toxinas".

Imagen tomada de guía de prevención Seguridad en trabajos en altura realizado por Osalan

Factor de Caída: Sirve para determinar la gravedad de una caída. Se calcula dividiendo la altura de la caída entre la longitud de la cuerda o cinta del sistema de sujeción disponible para repartir la fuerzade choque de la caída. Se calcula mediante la siguiente ecuación: Factor de caída = Altura de la caída/ Longitud de la cuerda o cinta del sistema.

Cuando en un trabajo nos encontramos con un factor decaída alto, seleccionaremos el mejor mecanismo para reducirlo como pueden ser los cabos deanclaje con absorbedores de energía.

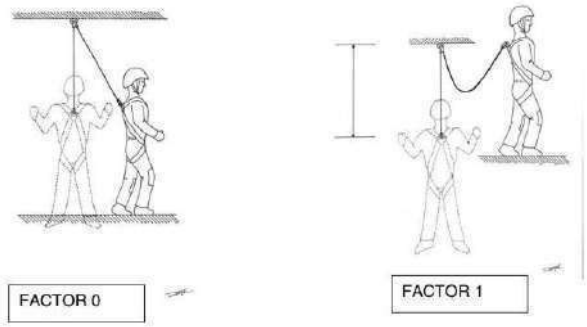

Imagen tomada de guía de prevención Seguridad en trabajos en altura realizado por Osalan

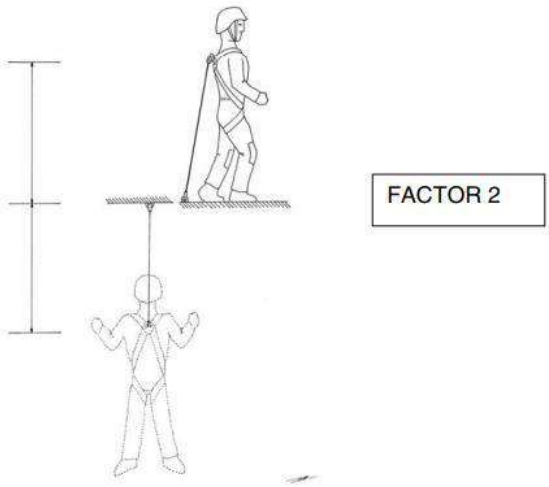

Imagen tomada de guía de prevención Seguridad en trabajos en altura realizado por Osalan

Efecto Péndulo: Cuando trabajamos lejos del punto de anclaje, la posible caída no se desarrollará demanera vertical sino que tendrá una trayectoria circular, describiendo un péndulo donde el punto de giro será el anclaje al que nos encontramos amarrados. Por tanto, tendremos que vigilar los posibles obstáculos que se encuentren en nuestra trayectoria de caída y no en nuestra vertical.

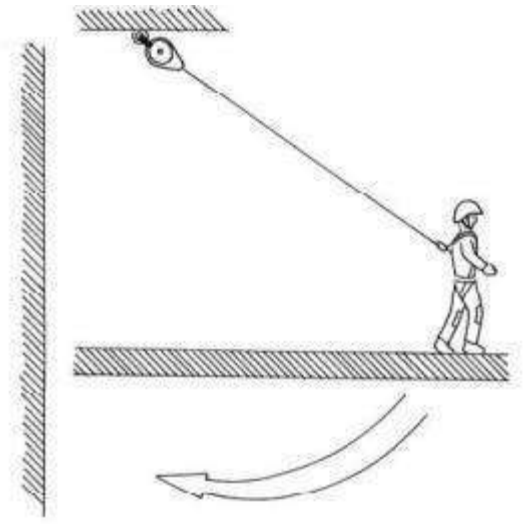

Imagen tomada de guía de prevención Seguridad en trabajos en altura realizado por Osalan

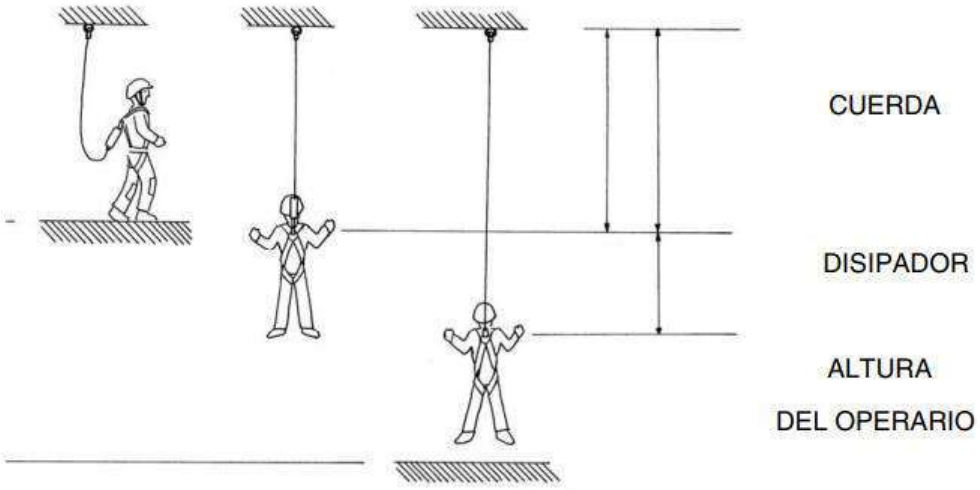
Distancia Libre de Caída: Al producirse una caída y ponerse en acción los diferentes sistemas deseguridad que hemos utilizado (cuerdas anudadas, cabos de anclaje con absorbedores ...) se produce generalmente un despliegue de éstos que se traduce en una elongación del sistema general. Cuando planifiquemos la seguridad de un trabajo en altura tendremos que tener en cuenta este alargamiento para evitar golpear contra el suelo. La distancia libre de caída es la

altura mínima que debe tener un sistema para evitar llegar al suelo en caso de un accidente.



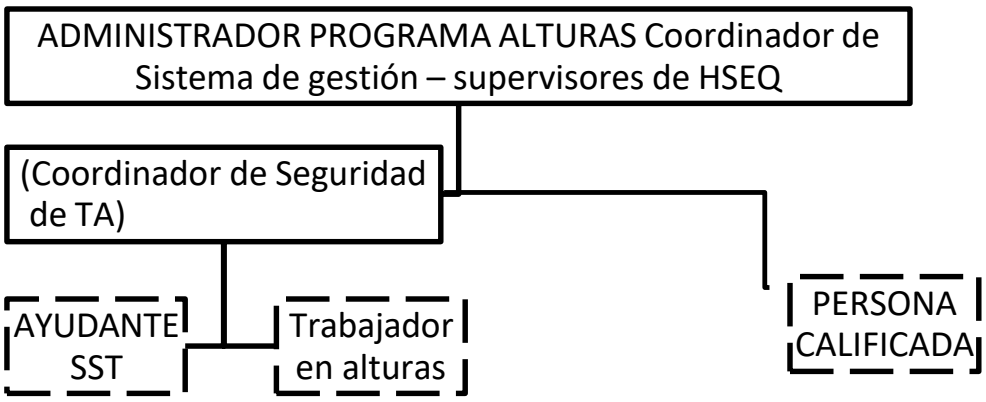


Imagen tomada de guía de prevención Seguridad en trabajos en altura realizado por Osalan

5. ORGANIGRAMA PARA TRABAJOS EN ALTURA

Con base en lo establecido en la Resolución 4272 de 2021, la cadena de mando por obra, en relación con las responsabilidades en la implementación y ejecución del Programa de Protección Contra Caídas, en términos de Seguridad y Salud en el Trabajo, se presenta a continuación:

6. MEDIDAS DE PREVENCIÓN

A continuación, se definen las medidas preventivas y de protección tanto colectivas como individuales, se definen los lineamientos para uso seguro de sistemas de acceso para trabajo en alturas, y se definen los aspectos a tener en cuenta para desarrollar la planificación del Programa ysu correspondiente seguimiento y control.

6.1. MEDIDAS PREVENTIVAS INDIVIDUALES

El primer paso a realizar el control del riesgo de tareas de trabajo en alturas es identificar las tareas a ejecutar acorde a las diferentes áreas de la operación, si corresponden a ser rutinarias o norutinarias y quien las ejecuta, con el fin de establecer los mecanismos de control en las mismas.

El inventario de tareas en alturas se relaciona en el Anexo 1.

6.1.1. Identificación de peligros evaluación y valoración de los riesgos

Para la identificación de los peligros en los trabajos en alturas se implementarán las siguientes herramientas:

- Inspecciones de seguridad.
- Matriz de peligros y riesgos.
- Listas de chequeo.
- Análisis de trabajo seguro.
- Permisos de trabajo.

Se cuenta con la matriz de peligros y riesgos basado en la metodología GTC 45 última versión, en la que se identifican los peligros de trabajo en altura, los controles y el nivelde riesgo para cada una de las actividades.

Cada proyecto constructivo desarrollará y contará con esta identificación de peligros, valoración del riesgo y determinación de los controles en la fase de planeación y a medida que se inicien dichas labores en obra serán divulgadas y socializadas en los comités de obra y/o comités paritarios de SSTde cada obra.

6.1.2. Capacitación y Entrenamiento

Las capacitaciones para trabajo seguro en alturas, deben realizarse en los centros de capacitación yentrenamiento debidamente autorizados y que cumplan con lo establecido en la resolución 4272 del2021, por el Ministerio de Trabajo.

Las personas objeto de los programas de capacitación para trabajo seguro en alturas son:

CLASIFICACIÓN	CURSO REQUERIDO				
	COORDINADOR DE TRABAJO EN ALTURAS Intensidad horaria: 80 Horas	**TRABAJADOR AUTORIZADO Intensidad horaria: 32 Horas**	**JEFES DE ÁREA Intensidad horaria: 8 Horas**	**CURSO ARMADO DE ANDAMIOS**	**CURSO RESCATE EN ALTURAS**
Coordinador de trabajo en alturas	X			X	
Ayudante de trabajo seguro en alturas		X			
Trabajador en alturas		X		X	
Jefe inmediato			X		
Rescatistas en alturas					X

Los diferentes niveles de formación que requieran reentrenamiento se deben desarrollar conforme a las indicaciones de la norma de trabajo en alturas en Colombia, que para el caso de la empresa se desarrollaran siempre que se cumplan los siguientes aspectos:

* Cuando un trabajador se vincule nuevo a la empresa o proyecto.
* Cuando cambien las condiciones técnicas o tecnológicas o condiciones laborales del trabajador.
* Como medida de actualización luego de 18 meses, siempre que las condiciones de trabajo en alturas se hayan mantenido o no se haya cambiado de actividad.

6.1.3. Estado de Salud del Trabajador

Se evaluará las condiciones de aptitud psicofísicas del trabajador para desempeñar en forma eficientesu labor sin causar perjuicio a su salud o la de terceros, de tal forma que se pueda establecer la competencia para realizar trabajo en altura. Este tipo de evaluaciones se desarrollaran con base en el profesiograma de la empresa, que detalla los exámenes requeridos según el rol de trabajador de alturas; producto de este proceso se generará un concepto para ejecutar la labor de alturas o en su defecto recomendaciones médicas ocupacionales, sobre las cuales se realizará seguimiento a su evolución.

No podrán realizar trabajo en alturas los menores de edad, las mujeres en cualquier tiempo degestación y toda persona que presente cualquier restricción temporal o permanente asociada en el concepto que emite el médico especialista en SST.

6.1.4. Control de acceso

Los sistemas de acceso deberán contar la tarjeta que autoriza o desautoriza el uso del sistema de acceso como se ilustra a continuación:

TARJETA ROJA PROHIBICION NO USAR	TARJETA AMARILLA EN ARMADO O DESARMADO	TARJETA VERDE PUEDE UTILIZARSE
NO UTILIZAR ESTE SISTEMADE ACCESO ¡ALÉJESE ! PELIGRO	SISTEMA EN ETAPA DE ARMADO O DESARMADO PRECAUCIÓN	SISTEMA APTO
SE PROHIBE EL USO DE ESTESISTEMA	PRECAUCIÓN	ESTE SISTEMA ESTA ENOPTIMAS CONDICIONES

6.1.5.Control en superficies con huecos o aberturas

Cuando se identifique superficies con huecos o aperturas se deberá instalar protecciones y señalización en el área del peligro y podrá utilizarse materiales que tengan resistencia suficiente para soportar el peso de los trabajadores que transitan en el área. Se deberá garantizar que el material instalado para proteger la caída de objetos o personas no tenga superficies cortantes opunzantes que generen un peligro adicional a la actividad.

6.1.6.Manejo desniveles

Para controlar desniveles que pueden generar caídas, tropezones o resbalones, se deberá instalar plataformas para toda la superficie donde se presenta el peligro y deberá verificarse si es necesario la instalación de barandas y pasamanos para áreas que presentan riesgo de caída en los extremos de desniveles

6.1.7.Ayudante de seguridad

Se podrá asignar un ayudante de seguridad como medidas complementariasa las medidas anteriormente enunciadas, con el fin de ayudar a advertir y controlar los peligros y riesgos que se identifiquen en el sitio donde se desarrollen trabajo en alturas.

6.1.8.Supervisor HSEQ persona competente

Cada proyecto contara con Supervisor HSEQ competente en trabajo en alturas que se desempeñaracomo líder de

seguridad y realizara las actividades que se describen a continuación y que esteprograma contemple:

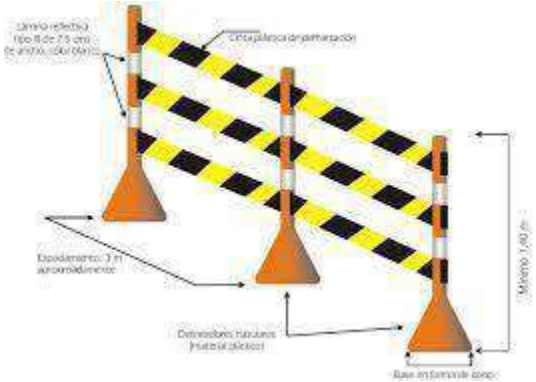
- Documentar la identificación de peligros, valoración del riesgo y determinación de loscontroles.
- Realizar Inspecciones de las condiciones de trabajo relacionadas con trabajo en alturas
- Autoridad para aplicar medidas correctivas que considere necesarias incluyendo ladetención de actividades.

Para garantizar la identificación oportuna de las condiciones y actos inseguros, se realizarán inspecciones rutinarias de seguridad específicas de acuerdo a los sistemas utilizados para trabajo enalturas (Inspecciones trabajo en alturas) a cargo de la persona competente en cada proyecto y verificación por parte del encargado de Seguridad y Salud en el Trabajo.

Nota: Además de las inspecciones rutinarias de los procedimientos seguros de trabajo en alturas se hace seguimiento específico de acuerdo a los sistemas utilizados para trabajo en alturas en cadauno de estos.

6.2. MEDIDAS COLECTIVAS DE PREVENCIÓN

6.2.1. Delimitación y Señalización del Área de Trabajo



Antes de iniciar cualquier labor de trabajo en alturas, el trabajador debe realizar la demarcación dela zona de peligro del área de trabajo mediante el uso de malla de protección, o guaya con cinta deseñalización de color amarillo y negro combinados y conos de señalización.

De igual forma se debe colocar en el sitio de operaciones la señalización temporal informativa que advierta el peligro de caída de personas u objetos.

Las medidas colectivas que adopta la empresa son:

- Borde de placa en edificaciones se instala barrera, línea de vida, delimitación señalización y cinta amarilla.

- Demarcación con cinta de señalización del perímetro con riesgo de caída de objetos:

- Señalización que indique trabajos en altura y riesgo de caída de objetos:

- Barandas: Medidas de prevención constituida por estructura que se utiliza como medida informativa y/o de restricción. Pueden ser portátil o fija también, ser permanente o temporales según la tarea que se desarrolle. Las barandas fijas siempre deben quedar ancladas a la estructura propia del área de trabajo en alturas.

Las barandas deben ser de material con características de agarre, libre de riesgos cortantes o punzantes. Cuando las barandas sean utilizadas como medida de restricción, deben ser fijas. El material y disposición de las barandas, debe asegurar la protección indicada en la presente resolución.

Las barandas nunca deben ser usadas como puntos de anclajes para detención de caídas, ni para izarcargas.

Cuando en una superficie en donde se camina y/o trabaja, se determine instalar barandas, estas deben colocarse a lo largo del borde que presenta el peligro de caída de personas y objetos.

Las barandas pueden ser reemplazadas por cualquier otro sistema que garantice las condiciones estructurales y de seguridad establecidas en esta resolución.

6.3. PROCEDIMIENTOS DE TRABAJO SEGURO

Para realizar las actividades de manera segura se contará con los procedimientos seguros para el trabajo en alturas documentados, los cuales se divulgan en los procesos de capacitación y entrenamiento de conformidad con los riesgos asociados al trabajo en alturas, con sus respectivas listas de chequeo rutinarias. Estos procedimientos deben ser revisados y ajustados cuando cambien las condiciones de trabajo, ocurra algún incidente o accidente, se modifiquen las normas que puedan afectar a los mismos y/o los indicadores de gestión así lo definan.

En caso que se realice cambio de personal, materiales, sitio y equipos de trabajo o se realicen laboresno rutinarias se documentará y socializara el procedimiento antes de comenzar la labor.

Si se va a realizar una actividad que no esté contemplada en estos procedimientos, se deberá formular el procedimiento respectivo.

En el Anexo 2 se adjuntan los procedimientos de trabajo seguro.

6.4. PERMISO DE TRABAJO EN ALTURAS Y ANÁLISIS DE TRABAJO

SEGURO

Todos los trabajadores deben diligenciar en el formato de permiso de trabajo seguro en alturas, este permiso de trabajo debe ser diligenciado y firmado en el sitio de trabajo por el Coordinador de Trabajo en Alturas, ingeniero residente y el trabajador, una vez verificados y aprobados los aspectos y condiciones de seguridad para la ejecución de la actividad antes de iniciar actividades. Mediante este formato se verificarán las principales condiciones de seguridad que debe cumplir el personal, instalaciones y sistemas de prevención y protección contra caídas.

En compañía del permiso para trabajos en alturas se debe diligenciar el análisis de trabajo seguro, que permite establecer los pasos para desarrollar el trabajo estableciendo peligros riesgos de cada uno de estos y determinando los controles específicos que previenen o protegen al trabajador frente a la materialización del riesgo.

El procedimiento para la realización del permiso de trabajo será el siguiente:

PASOS	DESCRIPCIÓN	RESPONSABLE
Informar detalles de la actividad	Informa los detalles y la necesidad de realizar la actividad que involucra trabajo en altura al trabajador y coordinador de trabajo en alturas, inspector de seguridad y salud en el trabajo o coordinador de SST	Jefe inmediato
Verificación instalación puntos de anclaje	Verifican que se encuentren instalados puntos de anclaje o se cuente con sistemas de acceso avalados en el área y que los elementos de protección personal y sistemas de prevención y protección contra caídas se encuentran en buen estado	Coordinador de trabajo en alturas y Supervisor HSEQ
Verificación puntos de anclaje	Calcular resistencia de materiales, diseñar, analizar, evaluar, autorizar puntos de anclaje y/o estructuras para protección contra caídas.	Persona calificada

Planificación, Identificación de peligros y riesgos, análisis de trabajo seguro	Revisan los detalles técnicos de la actividad, verifican las condiciones de tiempo y clima e identifican los peligros, riesgos y controles a implementar mediante la lista de chequeo anexa al permiso de trabajo y diligencian el análisis de trabajo seguro	Trabajador Coordinador de trabajos en altura
Permiso de trabajo en alturas	Diligencian el permiso de trabajo seguro para la actividada realizar e identifican que se cumplan con todas las normasde seguridad y aprueban elpermiso con nombre y firma El cierre permiso de trabajodebe ser realizado al finalizar elúltimo día de vigencia	Trabajador Coordinador de trabajos en altura
	La revalidación se realizará cuando existan cambios de turno, cambios decoordinador, cambios de trabajadores autorizados, cambios de autoridades que validen el permiso, cambios de las condiciones iniciales del trabajo. Para lo anterior se deberá realizar un nuevo permiso de trabajo en la que se establezcan las nuevas condiciones	Trabajador Coordinador de trabajos en altura
	Para la cancelación, suspensión se dejará la observación y se aprobará mediante el nombre y firma de los responsables.	Trabajador Coordinador de trabajos en altura
	Verifica que el permiso de trabajo se encuentra diligenciado correctamente y que se cumple con las normas de seguridad y aprueban el permiso con nombre y firma	Jefe inmediato

Inspección de seguridad	Verifica que las condiciones de seguridad de las actividades realizadas en altura se mantengan e informa cualquier hallazgo al trabajador e implementa planes de acción inmediatos	Supervisor HSEQ Coordinador de SST Coordinador de trabajos en altura

En el Anexo 3 se adjuntan los formatos: Permiso de trabajo y ATS.

7. SISTEMAS DE ACCESO PARA TRABAJO EN ALTURAS

Para el acceso a niveles superiores en la edificación se utilizará las escaleras, andamios colgantes, multidireccionales, sistemas de suspensión certificados, inspeccionados y autorizados. Todo sistemade acceso para trabajo en alturas y sus componentes, debe cumplir las siguientes condiciones orequisitos para su selección y uso:

1. Deben ser certificados acordes al estándar específico aplicable para el sistema de acceso seleccionado y el fabricante debe proveer información en español, sobre las principales características del sistema, un manual y/o catálogo de partes con sus características de ingeniería, recomendaciones de almacenamiento, mantenimiento, inspección y medidas de seguridad en su arme y desarme (cuando aplique), uso y operación.
2. Ser inspeccionados debidamente conforme a lo regulado en el Decreto 1072 de 2015 o la norma que lo modifique o sustituya.
3. Los sistemas elevadores de personas, deben ser inspeccionados mínimo una vez al año por una persona avalada por el fabricante o una persona calificada conforme a lasrecomendaciones del fabricante o las normas nacionales o internacionales vigentes.
4. Si existen no conformidades, el sistema debe retirarse de servicio y enviarse a mantenimiento (si aplica) por parte del fabricante o de una persona avalada por el fabricante o que el mantenimiento sea aprobado por una persona calificada, o eliminarse si no admitemantenimiento.
5. Ser seleccionados de acuerdo con las necesidades específicas de la actividad económica, la tarea a desarrollar y los peligros identificados por el responsable del SGSST, el administrador del programa de prevención y protección contra caídas y/o el coordinador de trabajo en alturas.
6. Ser compatibles entre sí, en tamaño, figura, materiales, forma, diámetro y estas características deben ser avaladas por el coordinador de trabajo en alturas y en caso dedudas, deben ser aprobados por una persona calificada o por una persona avalada por el(los) fabricantes.
7. Todo sistema de acceso debe garantizar la resistencia en todos sus componentes a las cargascon un factor de seguridad, que garantice la seguridad de la operación, de acuerdo con la máxima fuerza a soportar, cumpliendo con los criterios mínimos de auto estabilidad y autosoportabilidad, acorde con los requisitos establecidos por el fabricante o en las normasnacionales y/o internacionales, incluyendo protección por corrosión o desgaste por sustancias o elementos que deterioren la estructura del mismo.
8. En el caso de sistemas suspendidos por cables (andamios o canastas para transporte depersonal), del tipo eléctrico, neumático o manual, lo correspondiente a cables, conectores, poleas, y cualquier otro componente del sistema, debe ser certificado, o hacer parte originalde un sistema de andamios certificado

y/o, contar con diseños de ingeniería. El equipo y suspartes deben garantizar un factor de seguridad que garantice la seguridad de la operación, en caso de dudas, estos sistemas deben ser aprobados por una persona calificada.

9. En el caso de sistemas suspendidos por cables (andamios o canastas para transporte depersonal), del tipo eléctrico, neumático o manual, los contrapesos usados deben ser instalados acorde a los manuales del fabricante y/o contar con diseños de ingeniería aprobados por una persona calificada, en caso de plataformas que no usen contrapesos, el sistema de soporte debe contar con diseños de ingeniería aprobados por una persona calificada.
10. Se debe tener una hoja de vida de los equipos elevadores de personas, escaleras, y andamiosen los cuales sus partes cuentan con un solo diseño, donde estén consignados como mínimolos datos de: marca, serial, fecha de fabricación, tiempo de vida útil, historial de uso, registros de inspección, registros de mantenimiento, ficha técnica, certificación del fabricante y observaciones. En sistemas de acceso que se encuentren por partes, donde no es posible tener hojas de vida, y el empleador los usa en diferentes configuraciones, se deben tener identificadas las partes de diferentes marcas y/o referencias y mantener los registros de inspección. En sistemas de acceso alquilados el proveedor debe suministrar esta información para la trazabilidad de su uso e inspecciones durante el uso por parte del tenedor.
11. El mantenimiento de los sistemas de acceso, deberá ser realizado de acuerdo con las especificaciones del fabricante y registrados en la hoja de vida del equipo.
12. El montaje y operación de todo sistema de acceso para trabajo en alturas, debe garantizar una distancia segura entre este y las líneas o equipos eléctricos energizados de acuerdo al Reglamento Técnico de Instalaciones Eléctricas – RETIE.
13. El montaje y/u operación de toda estructura de acceso para trabajo en alturas, será inspeccionado por el coordinador de trabajo en alturas conforme a las instrucciones dadas por el fabricante o una persona calificada, atendiendo las normas nacionales o en su defecto las internacionales y de acuerdo con las disposiciones de prevención y protección establecidas en la presente resolución, su armado deberá cumplir con las condiciones técnicas y de seguridad con previa capacitación y certificación de armado expedida por el fabricante.
14. Los trabajos en suspensión deben ser realizados utilizando una silla para trabajo en alturas, que esté conectada a la argolla del arnés indicada por el fabricante y al sistema de descenso certificado. Todos los componentes del sistema de acceso por cuerdas, sistemas de ascenso, descenso y posicionamiento pre armados o motorizados deben estar certificados de acuerdo con las normas nacionales o internacionales aplicables. Adicionalmente, el trabajador estará asegurado a un segundo sistema de seguridad (ejemplo un sistema de línea de vida verticalportátil), instalado con un anclaje independiente.

8. OTROS SISTEMAS

8.1. SISTEMAS DE POSICIONAMIENTO

Los conectores de posicionamiento tienen la finalidad de permitir que el trabajador se ubique en unpunto específico a desarrollar su labor, evitando que la caída libre sea de más de 60 cm y debenestar certificados. Los conectores de posicionamiento deben tener una resistencia mínima de 5.000libras (22,2 kilo newtons — 2.272 kg). El anclaje o estructuras capaces de soportar una fuerza mínima de 3.000 libras por persona conectada (13,3 kilo newtons — 1.356 kgf)

Cuando los riesgos de caída están presentes, los sistemas de posicionamiento serán usados enconjunto con sistemas personales de detención de caídas anclados independientemente.

8.2. SISTEMAS DE RESTRICCIÓN

Los conectores para restricción de caídas tienen como función asegurar al trabajador a un punto deanclaje sin permitir que este se acerque a menos de 60 cm de un borde desprotegido. Estos conectores deben tener una resistencia mínima de 5.000 libras (22,2 kilo newtons —2.272 kg) ydebe ser certificado. El anclaje para los sistemas de restricción debe soportar una fuerza mínima de 1.000 libras por persona conectada (4,5 kilo newtons — 459 kgf).

9. SISTEMAS DE PROTECCIÓN CONTRA CAÍDAS

Todo sistema y/o equipo sometido a una caída debe ser retirado de la operación y no podrá volver a ser utilizado hasta que sea avalado por el fabricante o por una persona calificada.

Los elementos o equipos de los sistemas de protección contra caídas deben ser certificados y compatibles entre sí en tamaño, figura, materiales, forma, diámetro.

9.1. RECOMENDACIONES SOBRE EL CUIDADO DE CADA UNO DE LOS SISTEMAS DE PREVENCIÓN Y PROTECCIÓN CONTRA CAÍDAS

A continuación, se mencionan las recomendaciones para el cuidado de los sistemas para trabajaren altura:

- Leer las instrucciones y advertencias contenidas en cualquier sistema de protección contra caídas (Ver manual del fabricante).
- La vida útil y el alto desempeño de un elemento o parte de un sistema de protección anticaídas dependen de mantenimiento e inspección adecuada.
- Solo deben ser usados elementos compatibles, asegurar la compatibilidad de los componentes del sistema de protección contra caídas; para ello debe evaluar o probarcompletamente si el cambio o

modificación de un sistema cumple con el estándar a travésde una persona competente o calificado.

10. MEDIDAS DE PROTECCIÓN CONTRA CAIDAS

10.1. MEDIDAS ACTIVAS DE PROTECCIÓN

Como medidas activas de protección contra caídas se cuenta con los puntos y/o mecanismos deanclaje con los que debe contar a borde de placa de la edificación, los anclajes fijos y portátiles, líneas de vida verticales, eslinga en Y con absorbedor de impacto, los conectores, y arnés. Los elementoso equipos de los sistemas de protección contra caídas deben ser compatibles entre sí, en tamaño, figura, materiales, forma, diámetro y deben estar certificados conforme a las normas nacionales o internacionales pertinentes para el trabajo a realizar y tener hoja de vida.

A continuación, se mencionan los sistemas de protección personal contra caídas:

Arnés, Eslinga en Y con absorbedor de energía, anclaje portátil, mosquetones, eslinga de posicionamiento, línea de vida, freno o arrestador de caída para cuerda.

Los puntos de anclaje y líneas de vida que no cuenten con certificación deben ser diseñados por persona calificada.

PUNTOS DE ANCLAJE

Las líneas de vida Sistemas de protección contra caídas, son ancladas en un punto superior a la zona de labor para realizar desplazamiento vertical (ascenso/descenso). Deberán cumplir con losiguiente:

a. Líneas de vida horizontales fijas:

- Deben ser diseñadas y aprobadas en su instalación por una persona calificada la cual debe considerar para su diseño un factor de seguridad nomenor que dos (2) en todos sus componentes y podrán o no contar con sistemas absorbentes de energía de acuerdo con los cálculos de ingeniería. Cuando se trate de líneasde vida horizontales fijas, el instalador deberá contar con el aval del fabricante.
- Deben contar con deslizadores como: anillos, poleas, carros, u otros sistemas certificados definidos por el fabricante o diseñador para conectar ganchos, mosquetones u otros dispositivos de conexión de los equipos de restricción y/o detención de caídas. En su selección y uso se considerará su aplicabilidad teniendo en cuenta los requerimientos de claridad descritos por el fabricante.
- En el diseño de líneas de vida horizontales, se debe asegurar que no se supere la resistencia de la estructura.
- El cable a emplear para líneas de vida horizontales, debe ser en acero con alma de acero de diámetro nominal igual o mayor a 5/16″ (7,9 mm). En caso de tener líneas de vida temporales, pueden ser en acero con alma de acero y diámetro nominal igual o mayor a 5/16″ (7,9 mm), o ser en materiales sintéticos que cumplan con la resistencia mínima de 5.000 lb (22,2 kilo newtons — 2.272 kg) por persona conectada.
- Si la línea de vida horizontal fija es instalada en un ambiente donde pueda ser afectada por corrosión, el empleador debe garantizar como mínimo una revisión anual conforme con las condiciones y recomendaciones establecidas por el fabricante.
- El sistema será diseñado por una persona calificada, y deben ser instaladas por una persona avalada por el fabricante.
- Para proteger la línea de vida y la estructura (punto de anclaje), la persona calificada debeconsiderar si se requiere o no un absorbedor de energía en estos casos, su longitud posterior a la activación debe ser tenida en cuenta en los cálculos del requerimiento declaridad.
- Los sistemas de riel deben ser certificados por el fabricante o la persona calificada que lo diseña;

b. Línea de vida horizontal portátil:

- Cuando la persona calificada determine que se requiere dentro del diseño el uso de absorbedor de energía, podrá ser instalado por un trabajador autorizado, conforme a las recomendaciones del fabricante.
- Sus componentes deben estar certificados;
- Debe ser instalada entre puntos de anclaje que cumplan con la resistencia mínima indicada por el fabricante acorde al número de usuarios permitidos en la línea;

- No debe ser sobretensionada, y máximo se pueden conectar dos personas a la misma línea.

c. Líneas de vida verticales:

Son sistemas certificados anticaídas, fabricados en materialescon resistencia mínima de 5.000 lb (22,2 kilo newtons — 2.272 kg) por persona conectada,y que, debidamente anclados en un punto superior a la zona de labor, protegen al trabajador en su desplazamiento vertical (ascenso/descenso). La línea de vida vertical fija debe cumplir con lo siguiente:

- Se instalan en estructuras donde el ascenso vertical debe ser protegido y este es el mecanismo seleccionado.
- Deberán contar con puntos intermedios según recomendaciones del fabricante y la persona calificada.
- Cuando la persona calificada determine que se requiere dentro del diseño el uso de absorbedor de impacto para evitar sobrecargar en el anclaje que puede estar en el sistema,en el arrestador de caídas o en ambos.
- El o los puntos de fijación del sistema en la parte superior deben cumplir con las especificaciones de carga y tensión definidos por el fabricante.
- El sistema será diseñado por una persona calificada, y deben ser instaladas por una persona avalada por el fabricante.

d. Línea de vida vertical portátil:

- Deben ser en cable de acero de diámetro nominal entre 5/16" (7,9 mm) a 3/8" (9,5mm) o de cuerda entre 11 mm y 16 mm que cumplan con la resistencia mínima de 5.000 lb (22,2 kilo newtons — 2.272 kg).
- Las líneas de vida en cuerda no deben tener nudos en el extremo de su anclaje.
- Sus componentes deben estar certificados, y
- Deben ser instaladas en anclajes (puede ser uno o más de uno) que permitan laresistencia.

Recomendaciones de almacenamiento y limpieza:

- Almacenar en un lugar limpio, alejado de la lluvia y el sol.
- Los equipos se deben guardarse colgados.
- Las áreas de almacenamiento deben estar limpias, secas y libres de la exposición de humos elementos corrosivos.
- Evite las áreas donde haya calor, vapores, o cualquier otro agente nocivo.
- El equipo que este dañado o que requiera mantenimiento no deberá ser guardado en la misma área que el equipo en perfectas condiciones.
- En cuerdas o reatas remueva todas las superficies sucias con un trapo o esponja empapada en una solución de agua y jabón comercial o detergente con pH neutro. Enjabónelo con un vigoroso movimiento de

adelante hacia atrás, luego secarlo con un trapo seco. Mantener libre de polvo y lejos de calor excesivo y de la luz del sol. El elemento se seca sin exposición al sol o calores excesivos, vapor o periodos prolongados de luz solar. No se debe utilizar ningún tipo de solvente en la limpieza de reatas o cuerdas.

- En el caso de los herrajes después de cada uso retire los excesos de polvo o contaminantes. La acumulación de estos puede generar falla en el desempeño de seguros o resortes.
- Los ganchos pueden ser limpiados con detergente suave o desinfectado con un jabón desinfectante suave, esta limpieza se debe realizar para retirar la acumulación de polvo o pintura. Los mecanismos de los seguros pueden ser lubricados con un aceite para propósitosgenerales después de la limpieza.
- La limpieza y lubricación deben llevarse a cabo después de cada uso cuando se utilice en ambientes donde estén expuestos a sustancias corrosivas o contaminación con pinturas que pueden generar trabas en los seguros. Se debe almacenar en ambientes secos evitando vapores corrosivos o sustancias químicas.
- Evite golpear los elementos metálicos, deformaciones o daños generar deformaciones que evitan un adecuado funcionamiento. Todo sistema y/o equipo sometido a una caída debe ser retirado de la operación y no podrá volver a ser utilizado hasta que sea avalado por el fabricante o por una persona calificada

En el anexo 4 se adjunta formato de hoja de vida.

10.2. MEDIDAS PASIVAS DE PROTECCIÓN

Todos los componentes del sistema de red de seguridad deben estar certificados por sus fabricantes,y en conjunto deben ser capaces de soportar el impacto de la caída. Deben ser diseñados por una persona calificada y deben ser instalados, inspeccionados, mantenidos y aprobados por una personacalificada o una persona avalada por el fabricante. Todo sistema de red de seguridad debe tener una hoja de vida en donde estén consignados los datos de: fecha de fabricación, usos anteriores, registros de inspecciones, certificaciones y registros de pruebas en la obra, antes de ponerlo en funcionamiento.

10.3. MEDIDAS PARA PREVENIR CAÍDAS DE OBJETOS

Para prevenir la caída accidental de materiales en espacios vacíos como ascensores, terrazas se instalarán protecciones para evitar la caída de objetos a niveles inferiores. Todos los trabajadores deben llevar porta

herramientas.

10.4. ELEMENTOS DE PROTECCIÓN PERSONAL PARA TRABAJO EN ALTURAS

Como mecanismos para el control de los equipos y EPP se realizará:

- Registro inspección pre uso.
- Ficha técnica.
- Certificado de conformidad.

Los elementos mínimos de protección personal para trabajo en alturas con los que deben contar quienes realicen estas tareas son:

ELEMENTOS DE PROTECCION PERSONAL	NORMA	CARACTERISTICAS
Guantes	Estándares dela CEE e ISO 9002	Personal que se encuentra en alturas: Flexibles, Resistencia a corte, abrasión o pinchazos,
Casco con barbuquejo	ANSI Z-89.1 de 2003	Casco de seguridad (fecha de fabricación no mayor a 8 años y que presente buen estado al momento de chequearlo). Casco Tipo II. Barbuquejo con mínimo 3 puntos de anclaje. Peso no mayor a 295gr. Sistema ajuste al diámetro de la cabeza tipo ratchet.
Gafas de seguridad	ANSI Z-87.1 de 1989	Gafas de seguridad o cualquier otro elemento protector de ojos y cara (monogafas, viseras, caretas para soldar, etc.)
Botas de seguridad (dieléctricas)	ANSI Z-41 DE1999 o ASTM 2412, 2413	Botas de seguridad, suela antideslizante (con puntera), dieléctricas.
Protectores Auditivos	ANSI Z 3.19 de 1974	Protectores auditivos de acuerdo a nivel de exposición.
Ropa de Trabajo		De acuerdo a los factores de riesgo y condiciones climáticas. Deben estar en perfecto estado. Lostrajes que se sometan a contacto con contaminantes, deben ser desechados y correctamente dispuestos.

Tapabocas	Estándares NIOSH y OSHA para protección respiratoria	Elementos de protección respiratoria, según la tarea para la que se vaya a utilizar, ejemplo protección contra polvo, contra gases o vapores.

10.5. PLAN DE EMERGENCIAS Y PLAN DE RESCATE

Todo trabajo en altura se realizará con una persona de apoyo disponible para que, de ser necesario, reporte de inmediato y active el plan de emergencias.

Se contará con un plan de rescate a realizar en alturas, actualizado y disponible en el lugar de trabajo, escrito, practicado y certificado que garantice una respuesta organizada y segura, para acceder, estabilizar, descender y trasladar a un servicio médico apropiado, a un trabajador que haya sufrido una caída y esté suspendido de sus equipos personales de protección contra caídas, o haya sufrido una lesión o afección de salud en un sitio de alturas. Igualmente se garantizará la disponibilidad de equipos certificados y ajustados al tipo de operación en lo referente a longitudes, compatibilidad y resistencia a condiciones ambientales para realizar la operación de rescate en el sitio de trabajo y una capacitación específica sobre rescate a los trabajadores expuestos (brigada de emergencia).

Se adjunta Plan de rescate en el Anexo 5.

11. INSPECCIONES

Como mínimo cada año se realizará inspección para los sistemas de acceso usados, así como para los equipos del sistema de protección contra caídas con el fabricante.

Se realizarán inspecciones preoperacionales de cada equipo antes de realizar actividades de trabajo en alturas mediante el formato de permiso de trabajo y se deberá contar con hoja de vida donde será registrado cada uso y novedad que presente el equipo, esto con el fin de poder tener certeza del tipo de uso y trabajo que ha tenido, así como la conformidad para un nuevo uso.

Se adjuntan formatos de inspecciones en el Anexo 6.

12. CRONOGRAMA DE ACTIVIDADES

Anexo a este programa se planificarán las actividades del respectivo programa en el plan de trabajo anual en seguridad y salud en el trabajo y programa de capacitación

13. INDICADORES

Para realizar trazabilidad de la gestión en trabajo seguro en alturas se plantean los siguientesindicadores:

PARAMETRO A MEDIR	META	INDICADOR
IMPACTO	Ejecutar un 90% de las actividades programadas	Número de mejoras implementadas / Número de mejoras o hallazgos identificados *100
RESULTADO	Alcanzar valores por debajo del 20% en accidentalidad asociada a trabajos en alturas	Número de accidentes por trabajos en alturas / Número total de accidentes de trabajo
COBERTURA	Capacitar al 90% de la población objeto de capacitación en trabajo en alturas	Número de trabajadores que realizaron curso de trabajo seguro en alturas realizado / Número de trabajadores que requieren curso de trabajo seguro en alturas

ANEXOS:

Anexo 1 Inventario tareas en alturas.
Anexo 2 Procedimientos de trabajo seguro.
Anexo 3 Formato Análisis de trabajo seguro en alturas y permiso de trabajo.
Anexo 4 Formato Hoja de vida equipos.
Anexo 5 Plan de rescate.
Anexo 6 Formatos Inspección de equipos.

CONTROL DE CAMBIOS AL DOCUMENTO		
FECHA	**VERSION**	**CAMBIO REALIZADO**
Febrero de 2018	00	Emisión del documento
Agosto de 2022	01	Ajuste de acuerdo con Resolución 4272 de 2021
Mayo de 2023	02	Se ajustan responsabilidades de Gerencia, de ayudante de seguridad, se incluyen responsabilidades de líderes de proceso, área de compras y brigadas de emergencias. Se ajustan condiciones de salud de trabajadores, se añaden aspectos del ATS dentro de las medidas de prevención, se adecuan las metas de indicadores del programa. Se ajustan permisos de trabajo para obra civil y forestal.

PROCEDIMIENTO EXAMENES MÉDICOS OCUPACIONALES	GRU S.A. GESTIÓN RURAL Y URBANA S.A.S
	PD-SST-03-VER-01

OBJETIVO

Establecer el procedimiento para realizar exámenes médicos ocupacionales de pre ingreso, periódicos y de retiro a los aspirantes y empleados de Gestión Rural y Urbana S.A.S., con el fin de llevar el diagnóstico de salud de los trabajadores para planear y realizar actividades de prevención (programas de vigilancia epidemiológica), de acuerdo a los resultados obtenidos.

ALCANCE

Este procedimiento aplica para la realización de exámenes médico ocupacionales de pre ingreso, periódicos y de retiro a todo el personal que se vincule a la empresa.

GENERALIDADES

Este procedimiento se ajusta a la resolución 2346 de julio 11 de 2007, la cual se aplica a todos los empleadores, empresas públicas o privadas, contratistas, subcontratistas, entidades administradoras de riesgos laborales, personas naturales y jurídicas prestadoras o proveedoras de servicios de salud ocupacional, entidades promotoras de salud, instituciones prestadoras de servicios de salud y trabajadores independientes del territorio nacional.

RESPONSABILIDADES

• La Gerencia delega al Responsable de Seguridad y Salud en el trabajo, el seguimiento, la supervisión y el cumplimiento de las actividades mencionadas en el presente procedimiento para la realización de los exámenes médicos ocupacionales.

• La Gerencia suministrará los recursos físicos y económicos necesarios para la adecuada aplicación de este procedimiento.

• El Responsable SST y/o Residente de Seguridad y Salud en el Trabajo se encargará de implementar este procedimiento, así como la elaboración de la línea base de condiciones de salud, para establecer las actividades encaminadas a intervenir dichos factores que pueden incidir en la salud de los trabajadores y llevar las estadísticas de las actividades realizadas para cubrir el 100% de la población sintomática.

• El personal médico de las institución habilitada por la Secretaría de Salud seleccionada para la realización de los exámenes médicos ocupacionales, quienes proporcionan los conceptos médicos de aptitud y el diagnostico de condiciones de salud, como lo establece la Resolución 2346 de 2007.

• La institución habilitada por la Secretaría de Salud seleccionada para la realización de los exámenes médicos ocupacionales, quienes conservarán bajo su custodia las historias clínicas del personal atendido, como lo establece la Resolución 2346 de 2007 y Resolución 1918 de 2009 por la cual se modifican los artículos 11 y 17 de la Resolución 2346 de 2007.

DEFINICIONES

ANAMNESIS: Interrogatorio que se realiza a la persona en búsqueda de información acerca de datos generales, antecedentes, identificación de síntomas y signos, así como su evolución.

EXAMEN MÉDICO OCUPACIONAL: Acto médico mediante el cual se interroga y examina a un trabajador, con el fin de monitorear la exposición a factores de riesgo y determinar la existencia de consecuencias en la persona por dicha exposición. Incluye anamnesis, examen físico completo con énfasis en el órgano o sistema blanco, análisis de pruebas clínicas y para clínicas, tales como: de laboratorio, imágenes diagnósticas, electrocardiograma, y su correlación entre ellos para emitir un diagnóstico y las recomendaciones.

EXPOSICIÓN A UN FACTOR DE RIESGO: Para efectos de la presente resolución, se considera exposición a un factor de riesgo, la presencia del mismo en cualquier nivel de intensidad o dosis.

PERFIL DEL CARGO: Conjunto de demandas físicas, mentales y condiciones específicas, determinadas por el empleador como requisitos para que una persona pueda realizar determinadas funciones o tareas.

RESUMEN DE HISTORIA CLÍNICA OCUPACIONAL: Es el documento que presenta, en forma breve, todos aquellos datos relevantes relacionados con antecedentes, eventos, procedimientos de diagnóstico, tratamiento y rehabilitación, en especial lo relacionado con su exposición a factores de riesgo, antecedentes de ocurrencia de eventos profesionales, así como de reintegro laboral, que ha presentado una persona en un determinado tiempo y que han sido registrados en la historia clínica ocupacional.

VIGILANCIA EPIDEMIOLÓGICA: Un proceso lógico y práctico de evaluación permanente sobre la situación de salud o de condiciones de trabajo de un grupo humano, que permite utilizar la información para tomar decisiones de intervención a nivel individual y colectivo, con el fin de disminuir los riesgos de enfermar o morir. Su objetivo es obtener y generar información para la acción.

REGISTROS

- Profesiograma.
- Orden de examen médico ocupacional (Pre ingreso, periódico, retiro).
- Certificado de aptitud laboral.
- Diagnóstico de condiciones de salud.

ESPECIFICACIONES Y REQUERIMIENTOS

Para la selección del proveedor que prestará los servicios de realización de exámenes médicos ocupacionales se tendrá en cuenta lo descrito en el procedimiento P-COM-01PROCEDIMIENTO EJECUCIÓN Y CONTROL DE PROCESOS, PRODUCTOS Y SERVICIOS SUMINISTRADOS EXTERNAMENTE del SGC de Gestión Rural y Urbana S.A.S., anexo 1 especificaciones y requerimientos en SST para proveedores y contratistas:

- Certificado de existencia y representación legal, RUT.
- Orden de servicio o contrato.
- Licencia de salud ocupacional (hoy SST) de la IPS y de médicos especialistas que realizan los exámenes ocupacionales.
- Certificaciones técnicas de calibración de equipos con los que realizan los exámenes médicos ocupacionales.
- Habilitaciones de la Secretaría de Salud para cada uno de los servicios que preste la IPS.
- Sistema de Gestión de Seguridad y Salud en el trabajo certificado por la ARL.

PROCEDIMIENTO

Para la realización de los exámenes médicos ocupacionales de pre - ingreso, periódicos y de retiro, se seguirán las siguientes actividades:

ACTIVIDAD	RESPONSABLE	REGISTRO	OBSERVACIONES
1. Selección proveedor exámenes médicos ocupacionales	* Director desarrollo Organizacional	Los mencionados en el ítem de especificaciones y requerimientos.	Es necesario tener en cuenta las especificaciones y requerimientos establecidos para seleccionar al proveedor. Para las obras fuera de Bogotá, en las zonas donde no sea posible ubicar un proveedor que cumpla con los requerimientos establecidos, se contratará en lo posible con médico de acuerdo con lo establecido en el artículo 9 de la resolución 2346 de 2007.
2. Entrega de profesiograma a la IPS	* Director desarrollo Organizacional	Profesiograma	
3. Orden de examen médico de pre ingreso o periódico o de retiro	* Director desarrollo Organizacional / Residente SST	* Orden de examen médico.	De acuerdo al examen a realizar, el responsable de SST entregará a la persona la orden para realización del examen médico ocupacional, teniendo en cuenta lo establecido en el profesiograma. En esta orden se consigna el tipo de examen y pruebas complementarias que se necesiten, de acuerdo con lo establecido en el profesiograma.

ACTIVIDAD	RESPONSABLE	REGISTRO	OBSERVACIONES
4. Realización de examen médico	* IPS / Medico ocupacional.	* Historia clínica laboral. (Que queda bajo custodia de la IPS y/o médico especialista)	La realización de los exámenes se realizará así: - Para examen de ingreso luego de haber surtido el proceso de selección de Gestión rural y Urbana S.A.S. y antes de ser afiliado el trabajador a la seguridad social y firma de contrato. - Para examen periódico: Se realizarán programados una vez al año en el mes de febrero. Y por cambio de ocupación cuando se requiera, de acuerdo con lo establecido en el profesiograma. - Para examen de retiro: En los exámenes médicos de retiro, se hace firmar al empleado el recibido de la orden de examen médico y tendrá 5 días hábiles posteriores a su fecha de retiro para asistir al mismo, lo cual será potestad del trabajador asistir a este examen, por lo cual la empresa no tendrá ninguna responsabilidad. La anterior información será transmitida al trabajador a través de la inducción y notificación de riesgos. - Para examen post incapacidad: Cuando el trabajador haya tenido una incapacidad superior a 30 días se remitirá a valoración médica ocupacional. El médico realiza al aspirante los exámenes indicados por la empresa y consigna en la historia clínica todos

ACTIVIDAD	RESPONSABLE	REGISTRO	OBSERVACIONES
			los datos concernientes al estado de salud actual. La custodia de las Historias clínicas de los empleados estará bajo responsabilidad de la IPS y/o médico especialista, quien garantiza su confidencialidad. En caso de requerirse personal para una labor específica (subcontratistas) se exigirá el examen médico de ingreso; así como para los operadores de maquinaria y/o equipos, servicio de vigilancia para obras o proyectos, trabajadores en misión, etc.
5. Entrega de resultados	* IPS / Medico ocupacional. * Director Desarrollo Organizacional	* Certificado aptitud laboral. * Comunicado al trabajador con recomendaciones (cuando aplique).	Con base en los exámenes realizados y el estado del trabajador, el médico hace un dictamen y certifica: • Aspirante: es apto o no para desempeñar el cargo, apto con recomendaciones y/o restricciones. • Empleado: estado de salud actual. Los conceptos de aptitud serán entregados y estarán bajo custodia del Director de Desarrollo Organizacional, a través de los mecanismos con que cuente el proveedor: Página web o en medio físico. A cada uno de los trabajadores se les entregará copia del concepto de aptitud, conservando el original en la empresa con la firma del empleado, para que conozca, si fuere el caso recomendaciones de acuerdo a los resultados de la evaluación y los hallazgos en los exámenes paraclínicos y remisiones a sus respectivas EPS, en caso de ser

ACTIVIDAD	RESPONSABLE	REGISTRO	OBSERVACIONES
			necesario. Se hace seguimiento al cumplimiento de las recomendaciones dadas al trabajador (Asistencia a controles médicos).
6. Diagnóstico de salud de los trabajadores	* IPS / Médico ocupacional.	* Diagnóstico de salud.	El Director de Desarrollo Organizacional, solicitará a la IPS y/o médico especialista el diagnóstico de condiciones de salud, con el cual se establecerá la línea base de condiciones de salud y se programaran las actividades de promoción de la salud y prevención de accidentes y enfermedades laborales, que permitan mejorar la calidad de vida de los trabajadores. Lo anterior, de acuerdo con Resolución 2346 de 2007.
7. Programa de vigilancia epidemiológica	* Director de Desarrollo Organizacional	* Programa de vigilancia epidemiológica.	Se realiza el análisis de los resultados del diagnóstico de salud y se establecen las actividades de prevención y programa de vigilancia epidemiológica a que haya lugar.

CONTROL DE CAMBIOS

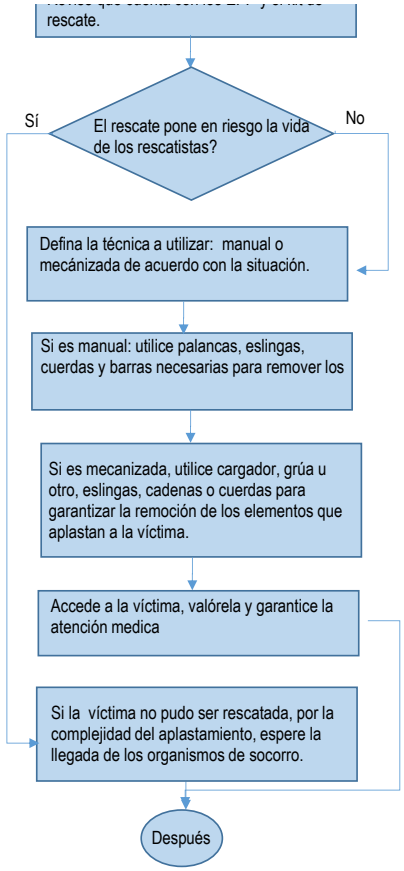
PROCEDIMIENTO OPERATIVO NORMALIZADO - RESCATE EN ACCIDENTE POR IZAJE DE CARGAS

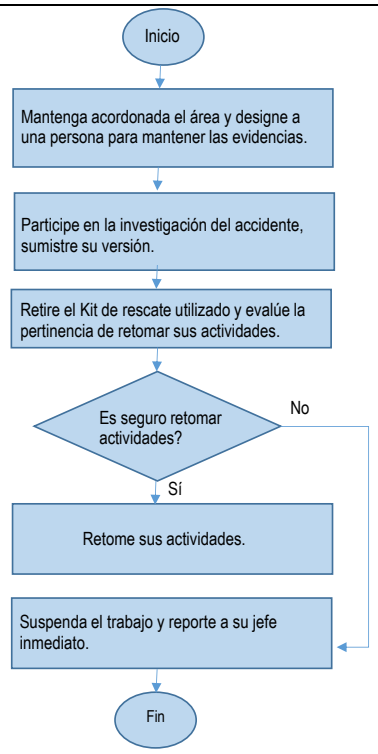
GRU SAS
GESTIÓN RURAL Y URBANA SAS

Versión 00

Fecha: 15/04/2024



Objetivo: Establecer los lineamientos de acción para notificar emergencias; antes, durante y después de su ocurrencia, para actuar en caso de presentarse un accidente al desarrollar actividades asociadas a trabajos de izaje de cargas.



PROCEDIMIENTO OPERATIVO NORMALIZADO - RESCATE EN ACCIDENTE POR IZAJE DE CARGAS - ANTES DE LA EMERGENCIA

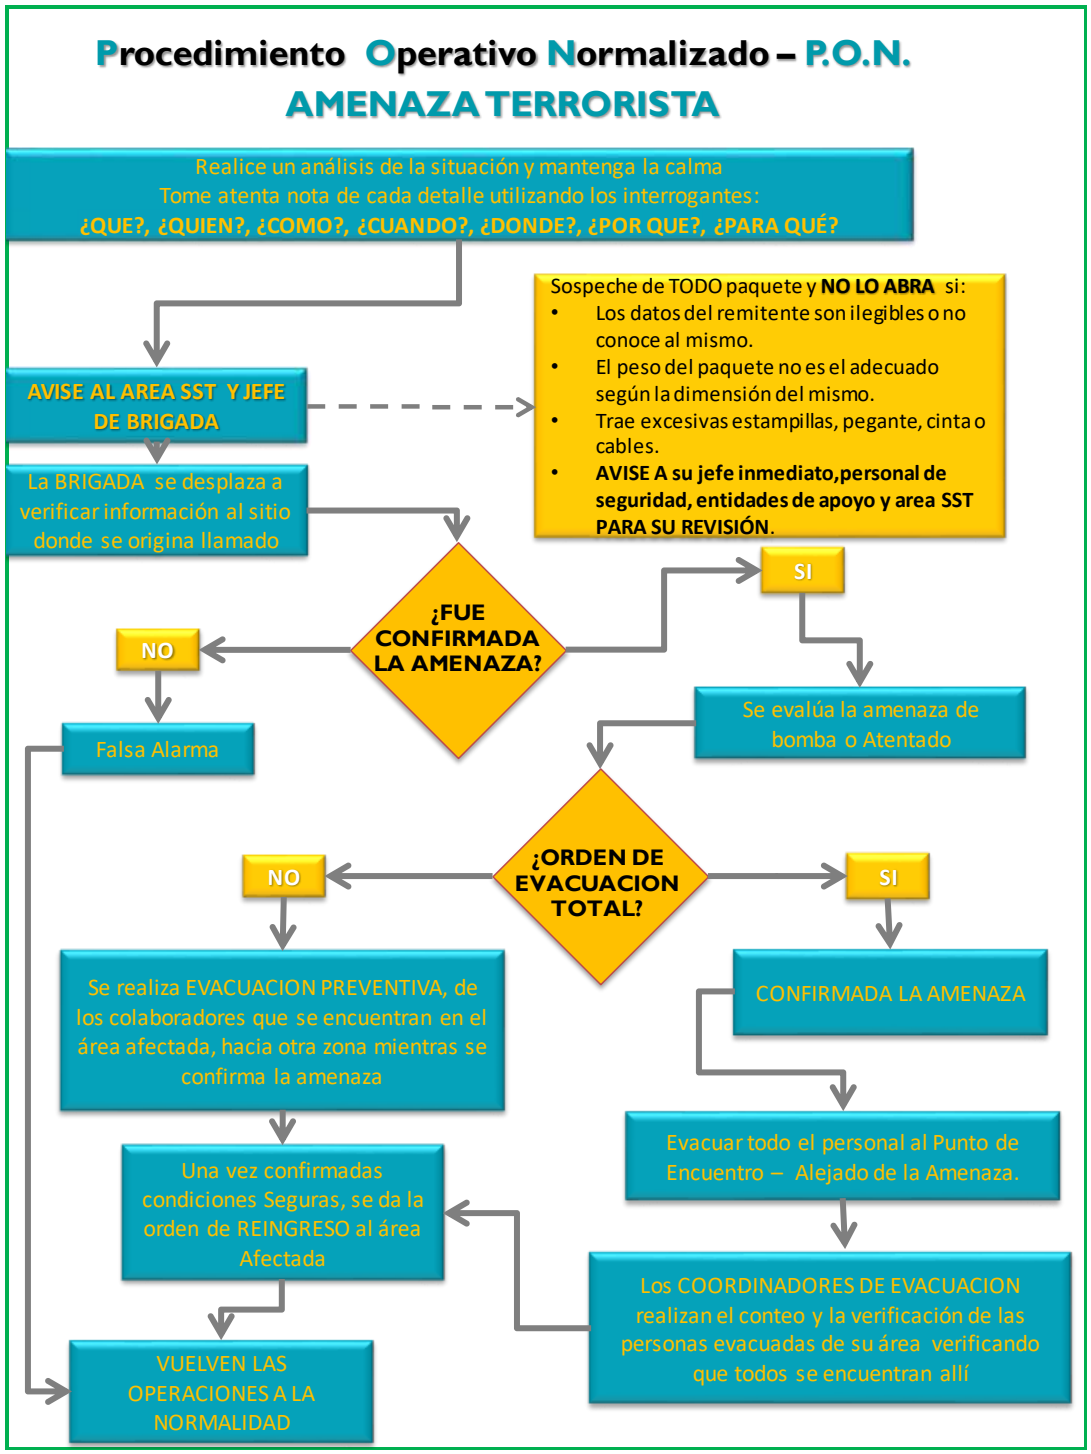
DIAGRAMA DE FLUJO	DESCRIPCIÓN	RESPONSABLE
Inicio	Inicio	
Arribe al sitio de operación, verifique el ATS, ajústelo identificando los peligros y diligencie permiso de trabajo.	Una vez arribe al sitio de operación, verifique la información del ATS y ajústela a la realidad del sitio, identificando los peligros presentes. Diligencie el permiso de trabajo.	Jefe inmediato, supervisor y trabajador
Identifique controles: elementos de rescate, centro médico cercano, asigne responsabilidades, delegue al encargado de reportar peligros circundantes	Identifique los controles a implementar en caso de presentarse un accidente. 1. Elementos y equipos de rescate 2. Centro médico más cercano 3. Establezca responsabilidades de la comisión de trabajo y cadena de llamadas en caso de emergencia (Jefe inmediato, linea 123, en caso de requerir ambulancia y linea ARL **Colmena y/o la ARL de los contratistas**) 4. Delegue una persona de la comisión, que esté atenta a los peligros que se puedan presentar en el medio circundante exterior.	Jefe inmediato, supervisor y trabajador
Implemente las medidas de protección colectivas: (Delimitación, señalización)	Implemente las medidas de protección colectivas: 1. Delimitación del área 2. Señalización	Jefe inmediato, supervisor y trabajador
Implemente las medidas de protección individual (EPP) Inicie la labor	Implemente las medidas de protección individual e inicie su labor utilizando los Elementos de Protección Personal requeridos para la tarea (guantes, botas de seguridad, casco)	
Durante		

PROCEDIMIENTO OPERATIVO NORMALIZADO - RESCATE EN ACCIDENTE POR IZAJE DE CARGAS - DURANTE DE LA EMERGENCIA

DIAGRAMA DE FLUJO	DESCRIPCIÓN	RESPONSABLE
Inicio	Inició la emergencia	
Evalúe la proporción de la emergencia: Lugar de ocurrencia, cantidad de personas afectadas, clase de emergencia, área involucrada hora de inicio de la emergencia y ruta de acceso a la zona y active la cadena de llamadas.	Se presenta una emergencia que requiera el rescate de uno o varios trabajadores accidentados, evalúe la proporción de la emergencia y active la la cadena de llamadas en caso de emergencia (Jefe inmediato, linea 123, en caso de requerir ambulancia y linea ARL **Colmena** y/o ARL de los contratistas) Tenga claridad de: 1.Lugar de ocurrencia de la emergencia 2.Número de personas afectadas 3.Clase de emergencia 4.Área involucrada 5.Hora de inicio de la emergencia 6. Ruta de acceso de a la zona 7. Informe al Facilitador SST, la situación ocurrida.	Jefe inmediato, supervisor y trabajador
Sí — Cuenta con formación para responder a la emergencia? — No		
NO intente rescatar la víctima, mantenga la calma, evite el acceso de personas ajenas a la emergencia. Esté atento a la llegada del equipo de rescate.	Si no cuenta con formación, no intente rescatar a la víctima, mantenga la calma y evite el acceso de personas ajenas a la emergencia. Esté atento a la llegada del equipo de rescate y suministre la información solicitada para facilitar el rescate por parte del persona de socorro.	Jefe inmediato, supervisor y trabajador
Actúe como primer respondiente para controlar la emergencia. Revise que cuenta con los EPP y el kit de	Si cuenta con la formación y el tipo de emergencia lo permiten, actue como primer respondiente para tratar de controlar la emergencia. Revise que cuenta con los elementos de protección personal (protección para la cabeza, manos y pies) y kit de rescate necesarios para realizar el salvamento como barras y eslingas de izaje)	Jefe inmediato, supervisor y trabajador

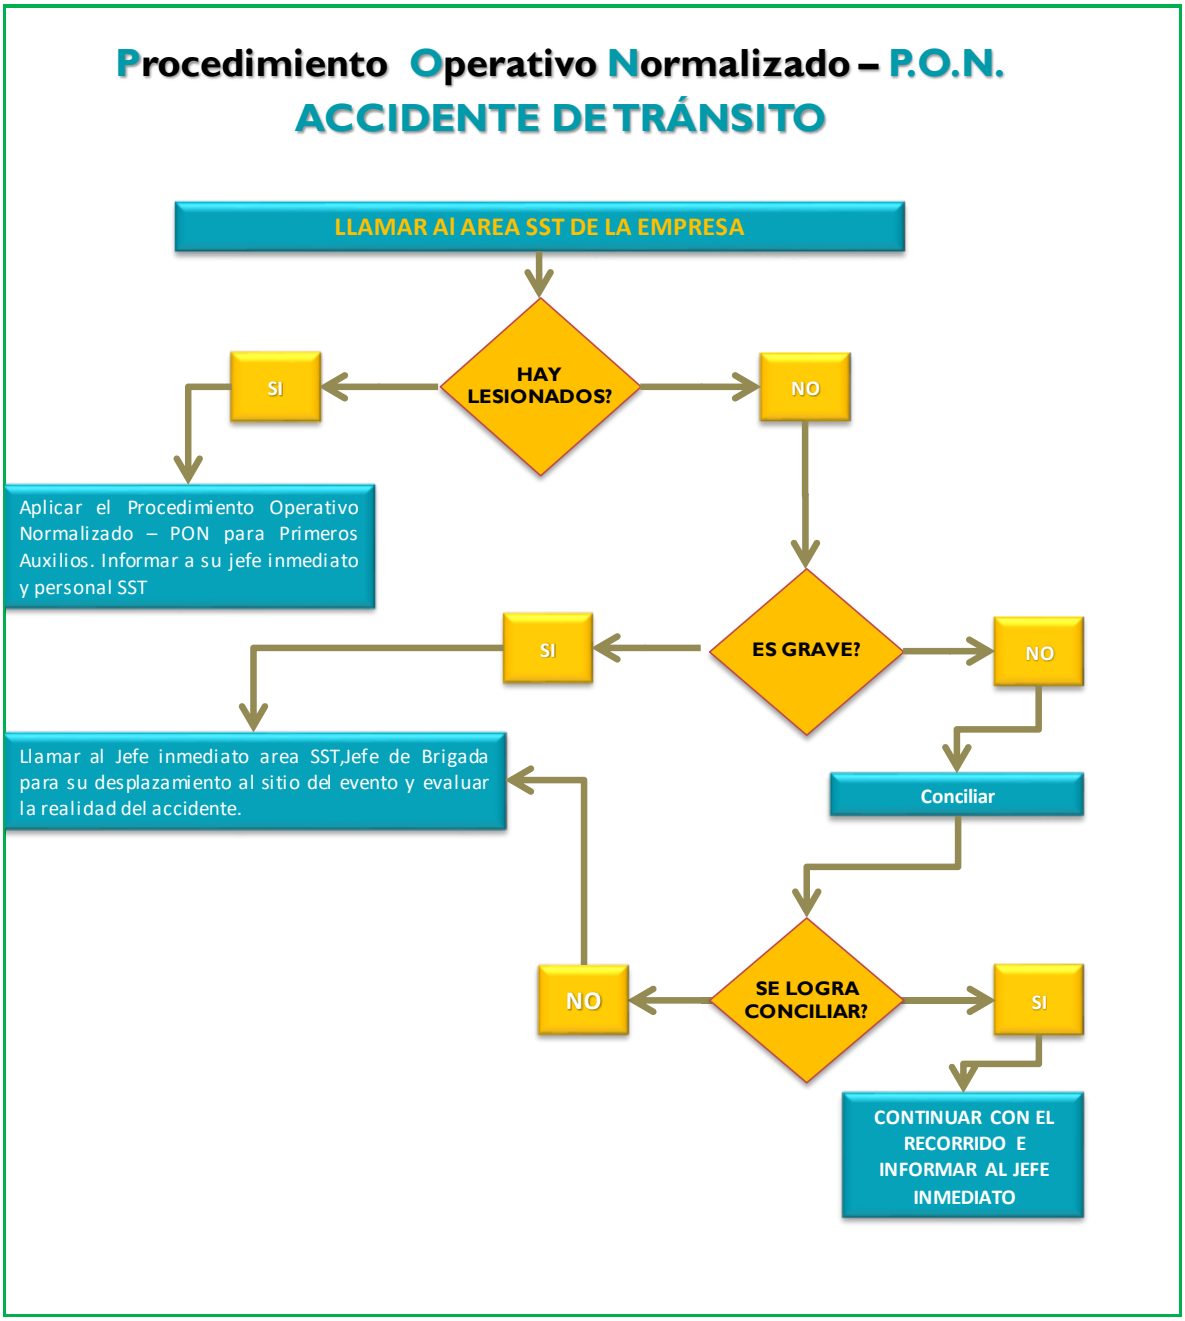
	Detenga las actividades de izaje que se estén desarrollando en el área y controle los riesgos que puedan afectar la seguridad del área.	Jefe inmediato, supervisor y trabajador
	Verifique que el rescate no ponga en riesgo la vida de los rescatistas	Jefe inmediato, supervisor y trabajador
	Defina la técnica que se debe utilizar manual o mecanizada	Jefe inmediato, supervisor y trabajador
	Si es manual: utilice palancas, eslingas, cuerdas y barras necesarias para remover los elementos que aplastan a la víctima. Remueva los elementos y acceder a su víctima, valora y garantiza la atención medica	Jefe inmediato, supervisor y trabajador
	Si es mecanizado, utiliza los elementos como cargador, grúa u otro, utiliza eslingas, cadenas o cuerdas para garantizar la remoción de los elementos que plastan a la víctima.	Jefe inmediato, supervisor y trabajador
	Retira los elementos que estén aplastando la víctima.	Jefe inmediato, supervisor y trabajador
	Realice la valoración de la víctima y garantice la atención médica.	Jefe inmediato, supervisor y trabajador

PROCEDIMIENTO OPERATIVO NORMALIZADO - RESCATE EN ACCIDENTE POR IZAJE DE CARGAS - DESPUÉS DE LA EMERGENCIA		
DIAGRAMA DE FLUJO	**DESCRIPCIÓN**	**RESPONSABLE**
	Finalizó la emergencia	
	Si el accidente causó una fatalidad, acordone el área y designe una persona para mantener las evidencias en la escena. No ingrese al área, ni permita el ingreso de personal ajeno, a menos que sea autorizaco por las autoridades competentes.	Jefe inmediato, supervisor y trabajador
	Participe en la investigación del accidente, suministrando su versión detallada de lo ocurrido.	Jefe inmediato, supervisor y trabajador
	Si el accidente no causó una fatalidad, retire los elementos utilizados para el rescate.	Jefe inmediato, supervisor y trabajador
	Evalué la pertinencia de retomar sus actividades.	Jefe inmediato, supervisor y trabajador
	Si es seguro retornar su labor y dar continuidad a las actividades programadas, continúe con su labor.	Jefe inmediato, supervisor y trabajador
	Si no es seguro retomar las actividades, suspenda el trabajo y reporte a su jefe inmediato.	Jefe inmediato, supervisor y trabajador
	FIN	



PROCEDIMIENTOS OPERATIVOS NORMALIZADOS

Los **P**rocedimientos **O**perativos **N**ormalizados se diseñaron para responder a situaciones predefinidas que generan alto riesgo o que ocasionan emergencias. De acuerdo a los hallazgos de cada uno de los puntos de **GESTION RURAL Y URBANA** y los riesgos específicos de cada una.



Los **PONS** Son decisiones tomadas por anticipado y se espera que las acciones definidas en los mismos se programen y ejecutan en la secuencia definida.

Estos procedimientos deben ser divulgados a TODA la población trabajadora, debe se debe explicar su funcionamiento, significado, diseño a todo el personal que integra la brigada de emergencias**.**

PROCEDIMIENTO
ACTIVIDAD
2
Todas las personas ubicadas en el PUNTO DE ENCUENTRO - PE
Estarán atentos si se presentan inconvenientes de desplazamiento, salidas obstruidas, etc.
Apoyarán a los GRUPOS EXTERNOS para el manejo de la emergencia.
Mantener informado al area SST
EMERGENCIA CONTROLADA?
NO
NO CONTROLADA: Se coordina con las entidades de apoyo y area SST las mejores opciones para el control de la emergencia. En caso de que las condiciones se vuelvan inseguras y las acciones que se han tomado no han generado el control de la emergencia se reevalúa los procedimientos que permitan tener el control de la EMERGENCIA.
SI
CONTROLADA: se procede al reingreso del personal a las instalaciones.con autorizacion de entidades de apoyo y area SST
Se da la orden de REINGRESO
Se realiza un Análisis de Evaluación de Daños y afectación de la operación.
Se realiza un informe priorizando las necesidades más importantes para lograr la operatividad en el menor tiempo posible.
Se realiza una reunión posterior y se evalúan las LECCIONES APRENDIDAS de la emergencia.
Se procede a la implementación de las mejoras recomendadas.
VUELVE LA NORMALIDAD A LAS INSTALACIONES
Investigacion del incidente

P.O.N. SISMO

Procedimiento Operativo Normalizado – P.O.N.
SISMO
¡¡¡ ESTA TEMBLANDO !!!
Busque un refugio seguro temporal, PROTEJASE especialmente la Cabeza y espere a que finalice el sismo
Una vez terminado el sismo VERIFIQUE
De aviso a entidades de appoyo y area SST
HAY DAÑO EN ESTRUCTURAS?
NO
HAY LESIONADOS?
SI
Continúe sus labores normalmente.
(Esté atento, pueden presentarse replicas. Siga las instrucciones que imparten los COORDINADORES DE EVACUACION y los GRUPOS DE RESCATE a través de medios radiales).
Si es Brigadista Utilice el PON de PRIMEROS AUXILIOS, en caso contrario avise a su Jefe inmediato.y area SST
SI
Avise a su jefe inmediato,Entidades de apoyo y area SST quien debe coordinar la evaluación general de la edificación.
Corte suministro de gas, luz, agua, etc.
AVISE A LOS GRUPOS DE APOYO SI HAY PERSONAS ATRAPADAS
NO
¿SIGUE TEMBLANDO?
SI
Una vez se asegure la estabilidad de la estructura, se dará la orden de ingreso a todo el personal.Con orden de entidades de apoyo y area SST

ING. RESIDENTE: _____

1. SEGUIMIENTO A HALLAZGOS DE LA INSPECCIÓN ANTERIOR

ITEM	DESCRIPCIÓN	C	NC	N A	OBSERVACIONES
1	Se tomaron las acciones correctivas o preventivas derivadas de la inspección anterior?				

2. INSPECCION EN CAMPO

2.1. SEÑALIZACIÓN

ITEM	DESCRIPCIÓN	C	NC	N A	OBSERVACIÓN	SEGUIMIENTO
2	La obra cuenta con la señalización adecuada (EPP, primeros auxilios, extintores, riesgo eléctrico, excavaciones y demás señales preventivas para los riesgos identificados; punto de encuentro, rutas de evacuación, prohibido fumar, etc)					
3	Los senderos peatonales están debidamente señalizados.					
4	Tienen la cinta de seguridad bien instalada y organizada.					
5	La cinta de seguridad esta en buen estado.					
6	Existen avisos de restricción de acceso a personal no autorizado.					
7	La señalización es clara, contundente y de tamaño adecuado.					
8	Se encuentra en buen estado " condiciones, aseo".					
9	La ubicación es la adecuada, en cuanto a la altura, la facilidad de observarla.					

2.2. ORDEN Y ASEO EN OBRA

ITEM	DESCRIPCIÓN	C	NC	N A	OBSERVACIÓN	SEGUIMIENTO
10	El almacenamiento de los materiales es el adecuado.					
11	Las sustancias químicas están almacenadas adecuadamente					
12	La herramienta se encuentra en orden y aseo.					
13	El contenedor se encuentra aseado.					
14	Los trabajadores están dejando sus prendas y uniformes organizados.					
15	Los baños se encuentran aseados.					
16	El material sobrante o reciclado esta debidamente aglomerado.					
17	Hay clasificación adecuada de los residuos.					
18	El acopio de materiales es el adecuado y esta señalizado.					
19	Los equipos en obra cuentan con la seguridad necesaria.					
20	Los equipos en general están aseados.					

2.3. EMERGENCIAS

ITEM	DESCRIPCIÓN	C	NC	N A	OBSERVACIÓN	SEGUIMIENTO
21	El punto de encuentro está bien ubicado y se orienta o encuentra con facilidad.					
22	Los trabajadores saben donde esta ubicado el punto de encuentro.					
23	Existe el listado de teléfonos de emergencia y la lista de teléfonos de emergencia esta actualizada y completa.					
24	Existe alarma en la obra.					
25	Los trabajadores tienen conocimiento del código de sonidos.					
26	El botiquín de la obra es el adecuado, cuenta con los elementos necesarios, está debidamente ubicado y fácil de localizar.					
27	La obra cuenta con equipos para extinción de incendios					
28	La obra cuenta con la camilla adecuada.					
29	Es de fácil manipulación y acceso la camilla.					

2.4. ELEMENTOS DE PROTECCIÓN PERSONAL						SEGUIMIENTO
ITEM	DESCRIPCIÓN	C	NC	N A	OBSERVACIÓN	
30	Se encuentra el personal con los EPP adecuados de acuerdo al riesgo que se expone.					
31	Se están realizando las diferentes actividades con la dotación acorde.					
32	Se tienen cascos de visitantes necesarios.					
2.5. EQUIPOS Y HERRAMIENTAS.						**SEGUIMIENTO**
ITEM	DESCRIPCIÓN	C	NC	N A	OBSERVACIÓN	
33	Se tiene en obra un listado de equipos y herramientas existentes					
34	Los equipos y herramientas se encuentran en buen estado.					
35	Los cables y enchufes están en óptimas condiciones.					
36	Se tienen preoperacionales de los equipos.					
37	Los equipos están funcionando correctamente.					
2.6. ACTIVIDADES CRITICAS						**SEGUIMIENTO**
ITEM	DESCRIPCIÓN	C	NC	N A	OBSERVACIÓN	
38	Las excavaciones están señalizadas.					
39	Se tiene en las excavaciones entibadas, taludes o protecciones necesarias.					
40	Se tiene la precaución necesaria para el enterramiento de tanques.					
41	Se tiene la precaución necesaria para la instalación del compresor.					
42	Se utiliza el arnés de seguridad en trabajos en altura.					
43	Se toman las medidas adecuadas cuando se efectúan cortes con pulidora.					
44	Se efectúan los controles de seguridad adecuados para el uso de soldadura.					
45	Se cuenta con procedimientos de trabajo seguro y están divulgados a los trabajadores.					
46	Se implementan los permisos para trabajo seguro.					
2.7. CARTELERA DE SEGURIDAD						**SEGUIMIENTO**
ITEM	DESCRIPCIÓN	C	NC	N A	OBSERVACIÓN	
47	Se encuentran publicadas las políticas actualizadas.					
48	Se tiene publicada la licencia de construcción.					
49	Lista de personal con nombre, CC, rh, alergias a medicamentos, nombre y teléfono de familiar en caso de emergencia, entidades a las que pertenece EPS. ARL.					
50	Esta publicado el código de sonidos.					
51	Esta publicado el plano de la obra con la ruta de evacuación e identificando el punto de encuentro.					
52	Esta publicado el personal que es brigadista y perteneciente al COPASO					
53	Están identificados las instalaciones y centros de salud más cercanos.					
54	Se tienen publicadas las actividades críticas.					
3. DOCUMENTACIÓN Y FORMATOS.						
ITEM	DESCRIPCIÓN	C	NC	N A	OBSERVACIÓN	
55	Esta la carpeta con la C.C. y afiliaciones a ARL, EPS Y PENSION de todo el personal que labora enla obra					
56	Esta diligenciado y al día el formato control de entrega de EPP					
57	Esta diligenciado y al día el formato de dotación de botiquín.					
58	Se esta llevando el control de horas extras.					
59	Se esta llevando diario el control de asistencia de los trabajadores (Formato control de personal en obra).					
60	Se realizan las charlas de seguridad mínimo 2 semanales.					
61	Se tienen los registros de asistencia y fotográficos de las actividades realizadas (capacitaciones y demás actividades de promoción y prevención)					
62	Se esta realizando y se tienen los soportes de los reporte de accidentes de trabajo					
63	Se esta diligenciando la investigación de los accidentes ocurridos.					
64	Se tienen las hojas de seguridad de los productos químicos usados en obra.					
65	Están al día los pagos de aportes de seguridad social de todo el personal de obra.					
66	Se tiene el cronograma de actividades actualizado y con el cumplimiento					

4. MEDIO AMBIENTE						SEGUIMIENTO
4.1 MEDIDAS PARA MINIMIZAR IMPACTO AL MEDIO AMBIENTE						
ITEM		C	NC	N A	OBSERVACIÓN	
67	Se tiene e implementa un Programa de Manejo Ambiental de la obra (planes de acción, Fichas, Instructivos)					
68	Se cuenta con punto ecológico señalizado y se acopia adecuadamente los residuos de acuerdo a lo establecido en el programa ambiental					
69	Disposición y tratamiento de residuos peligrosos					
70	Ahorro de agua y energia					
71	Licencias y Permisos (escombreras, canteras, vertimientos)					
72	Control de vectores					
73	Control de emisión de ruido					

OBSERVACIONES GENERALES:

Las acciones preventivas, correctivas y de mejora se deberán registrar en el formato FO 8.3-8.5.1-2-3 REPORTE DE NO CONFORMIDAD, PRODUCTO NO CONFORME, QUEJAS - TRATAMIENTO Y SEGUIMIENTO DE ACCIONES CORRECTIVAS, PREVENTIVAS Y DE MEJORA

		Si	No	NA
1	La plataforma de trabajo de la ùltima secciòn del andamio, cuenta con barandas en todo su perímetro para evitar caídas (altura de la baranda de 1.2 mts)?	☐	☐	☐
2	Los soportes, diagonales, escaleras y tuberías están libres de daños, agujeros o defectos estructurales?	☐	☐	☐
3	La plataforma de trabajo cubre el 75% del área del andamio (Mínimo 2 tablones de 25 cms de ancho)?	☐	☐	☐
4	La plataforma de trabajo tiene instalado rodapiés en todos su lados para evitar caídas de herramientas y otros objetos?	☐	☐	☐
5	Se encuentra el andamio amarrado cada tres secciones entre si ?	☐	☐	☐
6	Están instaladas todas las trabas de las diagonales?	☐	☐	☐
7	Los vientos de sujeción empleados son de manila o guaya acerada?, no es aceptable alambre.	☐	☐	☐
8	Los tablones utilizados para la plataformas del andamio cumplen las siguientes especificaciones:			
	a) Dos (2) pulgadas de grosor?	☐	☐	☐
	b) Sobresalen 30 cms a lado y lado del andamio como máximo?	☐	☐	☐
	c) No poseen nudos, partiduras, astillados, ni deformaciones algunas que disminuyan su resistencia estructural?	☐	☐	☐
	d) Tienen mínimo de ancho 25 cms cada uno?	☐	☐	☐
	e) Están colocados lo más juntos posible de manera que cubren toda la luz entre los soportes?	☐	☐	☐
	f) Están amarrados a la estructura del andamio?	☐	☐	☐
9	Los postes de los andamios están verticales y asegurados en forma rígida para evitar desplazamientos o balanceos?	☐	☐	☐
10	El andamio esta instalado y nivelado sobre bases sólidas? Tablones, platinas, **NO es aceptable ladrillos**	☐	☐	☐
11	Los acoples macho-hembra se encuentran en buen estado?	☐	☐	☐
12	Los módulos del andamio están asegurados entre secciones?	☐	☐	☐
13	Las plataformas del andamio se encuentran libres de residuos, despuntes, materiales, etc?	☐	☐	☐
14	Se tenderán extensiones eléctricas en el andamio?. Los tendidos y líneas de conducción de electricidad están aislados?	☐	☐	☐
15	Las personas que laboran sobre el andamio, han recibido entrenamiento para realizar tareas sobre los mismos?	☐	☐	☐
16	Se dispone de Arnés de seguridad y demás elementos necesarios de protección contra cáidas para trabajar sobre los andamios?	☐	☐	☐
17	Está señalizada el área alrededor del andamio?	☐	☐	☐

OBSERVACIONES:

TENGA EN CUENTA:

Si una o más respuestas son negativas (NO), **la condición debe ser corregida** antes de autorizar el uso del andamio.

Esta lista de verificación debe realizarse **cada vez que se modifique o se instale un nuevo andamio** y permanecer en terreno.

Todo andamio que no cuente con esta verificación autorización **no puede ser utilizado.**

GRU SAS
GESTIÓN RURAL Y URBANA S.A.S
F-SST-18-VER-01

FECHA: **UBICACIÓN:**

INSPECCION REALIZADA POR:

CARGO DE QUIEN REALIZA LA INSPECCION:

Resolución 0705 de 2007 El secretario distrital de salud. En ejercicio de sus facultades legales dispone que se debe contar con un botiquín de primeros auxilios, con los siguientes implementos basicos con el fin de atender las emergencias que se presenten en sus instalaciones.

TIPO A

CANT.	MATERIAL DE CURACIÓN Y APOYO	EXISTENCIA	REPOSICIÓN	FECHA DE VENC.	OBSERVACIONES
1	GASAS LIMPIAS PAQUETE				
1	ESPARADRAPO DE TELA ROLLO de 4"				
1	BAJALENGUAS PAQUETE X 20.				
1	GUANTES DE LATEX PARA EXAMEN				
1	VENDA ELÁSTICA 2 X 5 YARDAS				
1	VENDA ELÁSTICA 3 X 5 YARDAS				
1	VENDA ELÁSTICA 5 X 5 YARDAS				
1	VENDA DE ALGODÓN 3 X 5 YARDAS				
1	VENDA DE ALGODÓN 3 X 5 YARDAS				
2	AGUA Y JABON DESINFECTANTE				
1	SOLUCIÓN SALINA 250 cc ó 500 cc				
1	TERMÓMETRO DE MERCURIO O DIGITAL				
1	ALCOHOL ANTISÉPTICO FRASCO POR 275 ml				
	ELEMENTOS DE APOYO				
1	Listado uso de elemento				
1	Manual de Primeros Auxilios				

EL BOTIQUÍN ESTÁ EN UN LUGAR VISIBLE: SÍ:_____ NO:_____

EL BOTIQUÍN ESTÁ EN BUEN ESTADO: SÍ:_____ NO:_____

SE TIENEN ELEMENTOS ADICIONALES DENTRO DEL BOTIQUIN. CUALES: _____

RECOMENDACIONES: _____

RESPONSABLE INSPECCION_____ ENTREGADO A_____

El contenido de los botiquines no debe modificarse sin previa autorizacion del encargado del SG-SST.

INSPECCION DE ORDEN Y ASEO EN OBRA	GRU GESTION RURAL Y URBANA S.A.S F-SST-19-VER-02

Fecha de realizacion:	
Obra o Proyecto:	

Un lugar está en orden cuando no hay cosas innecesarias y cuando todas las cosas necesarias se encuentran en su respectivo lugar	**Bueno / Si**	**A mejorar / No**	**No Aplica**
MAQUINARIA Y EQUIPOS			
Limpias y libres de todo material innecesario			
Libres de filtraciones de aceite y grasa			
Protecciones, guardas adecuadas y en buenas condiciones			
ALMACENAMIENTO DE MATERIALES			
Apilados y ordenados en forma adecuada			
Medios de transporte de carga almacenados en lugares adecuados de forma segura y ordenada			
Maderas ubicadas en un solo punto y sin puntillas que generen riesgo de accidente para el personal			
HERRAMIENTAS			
Adecuadamente almacenadas			
Limpias de aceite y grasa al guardarlas			
Mangos seguros y en buen estado			
OFICINA			
Pasillos con ancho mayor a 1,2 metros			
Pasillo claramente demarcados			
Posee superficies seguras y aptas para el trabajo			
manchas de aceite y grasa			
Se dispone de un lugar para el papel de oficina a reciclar			
DISPOSICIÓN DE RESIDUOS			
Señalización de las canecas de disposición de residuos			
Residuos dispuestos en la caneca correspondiente:			
Blanco (Residuos aprovechables): Vidrio, plastico, carton, papel y metales			
Verde (Residuos orgánicos aprovechables):Restos de comida, desechos agricolas.			
Negro (Residuos No aprovechables): Papel higienico, servilletas, papeles y cartones contaminados con comida, papeles metalizados.			
EDIFICACIONES			
Muros y ventanas limpias y libres de cosas innecesarias (contaminación visual)			
Limpieza de las luminarias			
Escaleras limpias, libres de materiales, bien iluminadas, con barandas apropiadas y escalones en buenas condiciones			
TERRENOS A CAMPO ABIERTO, OBRA			
Se encuentran señalizados los peligros			
Se encuentra la zona de trabajo sin desperdicios y basuras en el piso			
Se encuentran las vias de transporte y tránsito de personal sin manchas, goteos y derrames de productos quimicos peligrosos.			
Se almacenan los combustibles en lugares adecuados y se tienen sus recipientes en buen estado de limpieza y orden.			
Baños portatiles y/o fijos se encuentran aseados y limpios.

INSPECCION DE HERRAMIENTA MANUAL Y MECANIZADA

FECHA:	**OBRA:**			
NOMBRE DE QUIEN REALIZA LA INSPECCION:		**CARGO**		F-SST-20-VER-01

I. Herrramientas manuales y mecanizadas	**SI**	**NO**	**OBSERVACIONES**
1. Se utilizan las herramientas diseñadas especialmente para la tarea?			
2. Se utiliza la herramienta de forma adecuada?			
2.1 Las herramientas manuales (alicates, martillos, cincel, macetas, punzones, palas, ceguetas, machetes,etc) tienen sus agarraderas/ sujetadores en buen estado de funcionamiento?			
2.2 Las puntas de las herramientas (mazo, filos, etc) no presentan superficies que podrían desprenderse o romperse?			
3. Las herramientas utilizadas están en perfectas condiciones (aptas para su utilización y funcionamiento)?			
4. El transporte de herramientas de un lugar a otro se realiza de forma adecuada? (utilización de portaherramientas, caja de harramientas o carros de transporte) según sea el caso y tipo de herramienta.			
5. Las herramientas electricas presentan sus aislamientos/ coberturas libre de fallas o cortaduras y tienen puesta a tierra?			
5.1 Las herramientas eléctricas tiene sus cables y conexiones sin roturas o fallas evidentes.			
6. El uso de las herramientas electricas por parte del operario es la correcta? Cuenta con (Uso EPP, Aseguramiento del Area, Conocimiento de la herramienta a utilizar)			
8. Se usan herramientas livianas como para no forzar el brazo y el hombro?.			
9. Herramientas dañadas, con defectos o gastadas son removidas de la obra hasta que sean reparadas?.			
10. Los trabajadores solo usan herramientas con las cuales tienen expericia o han sido entrenados.			
11. Las tareas son variadas para evitar que la misma herramienta no sea usada todo el dia cansando la mano.			
12. Los trabajadores que usan herramientas siempre usan proteccion ocular (Gafas de seguridad).			
13. Cuando el trabajo con herramientas presenta posibles riesgos de cortaduras, quemaduras, peligros físicos o químicos, los trabajadores usan protección para las manos y proteccion respiratoria. (guantes, tapa bocas).			
14. Las herramientas son guardadas en bolsas de herramientas u otros recipientes apropiados cuando no están en uso. Herramientas con filo o putiagudas son guardas en bolsas de herramientas o estuches?			
15. Las herramientas no se deben dejar en las escaleras, andamios o areas de trabajo arriba de la cabeza. Esta usted pendiente de esto?			
16. Toda herramienta/ mecanizada (equipo rotativo) dispone de su respectiva guarda de protección? (amoladoras, sierra circular, pulidora, mezcladora,etc).			
17. Las herramientas y equipos están libres de suciedad, grasa o material que pueda dañarlas y se encuentran almacenadas ubicadas en lugares accesibles y libre de cualquier afectación o daño?

INSPECCIÓN DE SUSTANCIAS QUIMICAS

F-SST-61 00

Fecha de Inspección: _____ **Obra:** _____

Alcance: Espacios de almacenamiento de sustancias de aseo y sustancias químicas utilizadas en el proceso productivo.
Instrucciones: Realice una (1) inspección al mes, escoja el día en el que se puedan verificar las siguientes condiciones:

Nº	ASPECTO DE VERIFICACION	SI	NO	ACCIONES DE MEJORA	FECHA DE CUMPLIMIENTO
1	El piso del depósito de productos químicos es plano, para un manejo sencillo y seguro y evitar derrames				
2	Están suficientemente identificadas y correctamente señalizadas las sustancias químicas				
3	Se dispone de las fichas de seguridad de todos las sustancias químicas que se utilizan				
4	Las hojas de seguridad del producto químico están ubicadas en un lugar visible en el área donde se están almacenando.				
5	Las personas que manipulan las Sustancias Quimicas, cuentan con los respectivos EPP (guantes, tapabocas acorde a hoja de seguridad, monogafas)				
6	Las personas que tienen contacto con las sustancias quimicas conocen las hojas de seguridad.				
7	Se cumplen con las indicaciones de almacenaje de las sustancias quimícas expuestas en las hojas de seguridad que entregan los proveedores.				
8	Se almacenan las sustancias químicas agrupando los que tienen riesgos comunes y evitando proximidad con incompatibles.				
9	Se almacenan los productos inflamables en muebles protegidos o en recintos especiales				
10	Ofrecen suficiente resistencia física los elementos para el aislamiento de las sustancias quimícas, como estibas, contenedores y/o cajas metálicas o stands elevados.				
11	Los estantes donde se almacenan las sustancias químicas están debidamente anclados para evitar derrames.				
12	Son totalmente seguros los envases de sustancias químicas que se utilizan				
13	Los residuos de envases de productos químicos se almacenan y disponen adecuadamente por parte de los proveedores				
14	Se controla la retención en la zona de almacenamiento, en caso de fugas o derrames.				
15	Se evita transvasar productos químicos a otros envases no controlados.				
16	Se verifican la fecha de vencimiento de los productos químicos y los que se encuentren vencidos, así como los elementos que se contaminen con estos y son recogidos y dispuestos por el proveedor de manera adecuada.				
17	El Cuarto de almacenamiento cuenta con suficiente iluminación y ventilación.				
18	El cuarto de almacenamiento debe tener paredes y pisos impermeables de facil limpieza.				

19	El Cuarto de almacenamiento tiene estibas de plastico, para colocar los productos quimicos que quedan ubicados en el piso.				
20	Se cuenta con Kits antiderrames para controlar un eventoen por derrames de Sustancias Químicas				
21	Se cuenta con minimo 1 extintor multiproposito ABC y de Gas Carbonico en caso de incendio.				
22	Se controla el acceso al espacio donde se deponen las sustancias químicas

			Nombre: Del responsable de la Actividad.		
Equipo a emplear:	 Equipo de soldadura por arco ☐	 Equipo de Oxicorte ☐	 Equipos de corte ☐		

LISTA DE CHEQUEO DE SOLDADURA POR ARCO	SI	N/A
¿El cable o encauchetado, está libre de cortes, partes vencidas, partes quemadas y exposición de cables?		
¿El enchufe eléctrico se encuentra en buen estado y cuenta con polo a tierra?		
¿ La caja o Generador se encuentra libre de oxido, completa, tornillos ajustados y con la placa de información técnica del equipo?		
¿El botón de encendido (On/Off) de la caja o generador se encuentra fijo y funcionando?		
¿El indicador de voltaje y perillas de ajuste del voltaje se encuentran fijas y funcionando?		
¿La rejilla de ventilación del equipo se encuentra libre de elementos extraños o que obstruyan la ventilación?		
¿Los bornes para conexión del electrodo en la caja o generador, se encuentran libres de oxido o conexiones improvisadas?		
¿El cable del electrodo se encuentra libre de cortes, partes vencidas, partes quemadas y exposición de cables?		
¿El porta electrodo se encuentra libre de grietas o partes rotas y presenta buen ajuste?		
¿La mordaza del electrodo sujeta firmemente y su estado no presenta partes desgastadas o lizas?		
¿La pinza de masa sujeta firmemente, no presenta partes desgastadas y su cable esta libre de cortes, empalmes o quemaduras?		

LISTA DE CHEQUEO EQUIPO DE OXICORTE	SI	N/A
¿El soplete, cámara de combustión y válvulas de paso de los gases, se encuentran libres de golpes y de sustancias químicas?		
¿Partes del soplete como válvulas de paso, válvula anti-retroceso y conexiones, se encuentran ajustadas firmemente?		
¿Los reguladores de paso de gas se encuentran libres de golpes partes deformes, libres de sustancias químicas (grasa-aceites) u orificios de escape?		
¿Los manómetros se encuentran funcionando, se observan fijos, y protegidos frente a posibles golpes?		
¿Las Mangueras de Oxigeno y acetileno se observan libres de orificios, grasa, aceite y terminales de conexión correctamente ajustados?		
¿Los cilindros se encuentran identificados y se cuenta con las MSDS para cada uno de los cilindros?		
¿La válvula del cilindro de acetileno se encuentra dirigida en una dirección diferente respecto a la válvula del cilindro de oxigeno (no se encuentran enfrentadas)?		
¿Los cilindros se encuentran asegurados firmemente al carro porta cilindros?		
¿El carro porta cilindros cuenta con los elementos de sujeción para cada uno de los cilindros, en buen estado y ajuste?		
¿Se observa que el carro porta cilindros está libre de grietas, partes sueltas, ruedas completas ajustadas y en funcionamiento?		

LISTA DE CHEQUEO EQUIPOS DE CORTE Y ESMERILADO	SI	N/A
¿El estado general del equipo se observa libre de fisuras, partes rotas, aceite, grasa u otras sustancias?		
¿El cable y encauchetado, está libre de cortes, partes vencidas, partes quemadas y su enchufe cuenta con polo a tierra?		
¿La equipo cuenta con botón de encendido y apagado fijo y funcionando?		
¿El disco de corte es el necesario para el tipo de corte o amolado a realizar?		
¿El disco de corte se observa uniforme libre de grietas o partes con desgaste excesivo y ajustado firmemente?		
¿ El equipo cuenta con guarda de seguridad que protege el disco, asegurada a la estructura de la herramienta?		
¿Se cuenta con la empuñadura auxiliar (manija de agarre auxiliar) instalada al equipo sin presencia de movimientos o desajustada?		
¿ Se protege el entorno, señaliza y se trabaja el equipo con precaución en caso de actividades simultaneas?		
¿ Si el equipo se soporta en el piso, est espacio es firme nivelado, amplio y despejado?

DILIGENCIADO POR:	

1. OBJETIVO

Suministrar un método sistemático para introducir cambios en **GESTION RURAL Y URBANA SAS** de una forma controlada, asegurando que los cambios internos y externos que impacten la seguridad y salud en el trabajo sean evaluados, aprobados y documentados previamente a la implementación para mejorar el desempeño del Sistema de Gestión.

2. ALCANCE – APLICACIÓN

Este procedimiento aplica a todas las áreas operativas y administrativas de **GESTION RURAL Y URBANA SAS**, así como todos sus contratistas y proveedores.

3. DEFINICIONES Y ABREVIATURAS

- **Análisis del cambio**: proceso que permite reconocer la existencia y características de los peligros a evaluar, la magnitud de los riesgos asociados en os cambios o nuevos proyectos y decidir si dichos riesgos son o no aceptables.
- **Área responsable del cambio**: área responsable de la implementación, desarrollo y entrega del cambio o nuevo proyecto.
- **Cambio**: modificación significativa de un proceso, instalación o equipo ya existente.
- **Gestión del cambio**: aplicación sistemática de procesos y procedimientos para identificar, evaluar, controlar y monitorear los riesgos en los cambios y nuevos proyectos.
- **Proyecto**: conjunto de actividades realizadas bajo un esquema establecido, que tienen un inicio, un fin y un objetivo: crear una instalación.

4. RESPONSABILIDADES

a. Jefe o supervisor del área responsable del cambio

- Evaluar todo cambio o nuevo proyecto mediante el proceso de Gestión del Cambio.
- Coordinar con el área de SG-SST la revisión de la Gestión del cambio.
- Implementar los controles definidos en la Gestión del cambio.

- Actualizar la Gestión del cambio de ocurrir modificaciones que no fueron contempladas en el análisis inicial.

b. Responsable proceso SST

- Revisar y aprobar la Gestión del cambio.
- Facilitar el proceso de Gestión del Cambio y orientar a los participantes de acuerdo con la metodología.

5. CONDICIONES GENERALES

Se debe aplicar gestión del cambio para cualquiera de los siguientes casos, siempre que impacte la seguridad y salud en el trabajo:

- Creación de nuevo cargo o se reasignen funciones en los cargos existentes.
- Cuando se introduzca una nueva actividad o cambio dentro de los procesos.
- Cuando se presenten cambios en métodos de trabajo.
- Cuando surja un cambio de maquinaria, equipos y/o herramientas.
- Cuando se realice una modificación en las instalaciones de la empresa.
- Cuando se presenten cambios externos (cambios en la legislación, evolución del conocimiento en seguridad y salud en el trabajo, entre otros).
- Control y mitigación del virus SarsCov2 COVID-19.

La Gestión del Cambio debe ser aplicada como un proceso continuo previo a la introducción del cambio o ejecución del nuevo proyecto.

La Gestión del Cambio está basada en el procedimiento de identificación de peligros y debe cumplir con todo lo indicado en dicho procedimiento.

La Gestión de Cambio debe ser actualizada en la Matriz de Peligros.

6. PROCESO DE GESTIÓN DEL CAMBIO

La Gestión de Cambios consta de las siguientes etapas:

- Establecer las características del Cambio:

Implica que el jefe o supervisor del área responsable del cambio defina con el responsable del SG-SST si el cambio es significativo y amerita aplicar el presente procedimiento.

- Analizar el Cambio:

  Implica que el jefe o supervisor del área responsable del Cambio evalúe de manera general el cambio o nuevo proyecto mediante el formato de Gestión del Cambio.

En el siguiente cuadro se muestra un proceso típico de gestión de cambio:

INFRAESTRUCTURA	Se realizará una evaluación del riesgo cuando se realice cambio de sede o remodelaciones que generen cambios en los riesgos o peligros nuevos.
LEGISLACIÓN	Los cambios en los requisitos legales serán controlados incluyendo la nueva norma de la matriz legal y definiendo planes de acción si se requiere.
PERSONAL	Ingreso de personal nuevo: - Se requiere realizar la evaluación médica ocupacional e inducción. Cambio de cargo: - Verificar si se requiere examen adicional para aplicar al nuevo cargo e inducción para los riesgos de ese nuevo cargo.
SISTEMA DE GESTIÓN	Actualización de documentos o cambio de documentos se hará por control de documentos y registros, adicionalmente cualquier cambio reciente en los controles del sistema de gestión serán actualizados en la Matriz de peligros y riesgos.
PROCESOS O ACTIVIDADES. METODOS DE TRABAJO. CAMBIOS DE MAQUINARIA, EQUIPOS	Los cambios de los procesos, actividades, métodos de trabajo, operaciones críticas no rutinarias, cambios de maquinaria o equipo que generen nuevos riesgos serán gestionados por medio del análisis Matriz de peligros, y se definirán los controles aplicables.

PREVENCIÓN – MITIGACIÓN COVID-19	Actualización y creación de documentos, formatos, protocolos y demás documentos relacionados con la contingencia por virus SarsCov2 COVID-19. Cambios estructurales aplicados debido a la contingencia, suministro de elementos de bioseguridad y EPP adicionales.

A continuación, se dan a conocer las actividades que contempla el procedimiento de gestión del cambio, cuando aplique:

PROCEDIMIENTO GESTION DEL CAMBIO

INTRODUCCIÓN

Como parte del Sistema de Gestión de Seguridad y Salud en el Trabajo (SG-SST) de la empresa GESTION RURAL Y URBANA S.A.S., y de acuerdo con lo establecido en la normatividad vigente en Colombia, se formula el programa de capacitación que se implementará en todos los centros de trabajo y que estará dirigido a todo el personal independientemente de su forma de contratación.

El programa de capacitación garantiza las habilidades y competencias que los trabajadores requieren para fortalecer la cultura de autocuidado frente a los peligros y riesgos a los que están expuestos en su actividades laborales diarias, a través de procesos de capacitación que generen toma de conciencia frente a su seguridad y la de los demás.

Igualmente, es necesario que los trabajadores conozcan los efectos que sobre su salud tienen los riesgos presentes en su ámbito laboral y los controles que, en conjunto, se deben implementar para minimizar riesgos de accidentes y enfermedades laborales, actuando como un factor de prevención y motivando al compromiso de los trabajadores a la implementación de normas de seguridad que garanticen la aplicación de conocimientos adquiridos durante el desarrollo de este programa.

Para el logro de los compromisos de la política integral de GESTION RURAL Y URBANA S.A.S. es importante capacitar, entrenar e incrementar las competencias del personal desde el mismo momento en que ingresan a la empresa a través de procesos de inducción, reinducción, entrenamiento y capacitación en seguridad y salud en el trabajo, como parte de su responsabilidad de garantizar ambientes sanos y seguros, el desarrollo integral como personas y el cumplimiento de metas organizacionales.

1. OBJETIVO

Definir lineamientos para el desarrollo del Programa de Capacitación en seguridad y salud en el trabajo que permita a los trabajadores y contratistas obtener los conocimientos necesarios para identificar los peligros y controlar los riesgos laborales promoviendo una cultura de autocuidado que favorezca su sentido de pertenencia, autonomía y su seguridad.

2. ALCANCE

Este programa de capacitación aplica a todos los colaboradores de GESTION RURAL Y URBANA S.A.S. extensivo a todos los niveles de la organización incluyendo a trabajadores dependientes, contratistas y de cualquier otra forma de contratación que la empresa llegara a tener.

Para cada obra o proyecto, se formulará un cronograma de capacitación acorde a la identificación de peligros, evaluación y valoración de los riesgos.

3. DEFINICIONES

CAPACITACIÓN[1]: consiste en desarrollar las competencias de los trabajadores expuestos y los responsables de aplicar las medidas de control, utilizando metodologías participativas acorde a los estilos de aprendizaje y nivel educacional.

La capacitación constituye una herramienta fundamental en la aplicación de un plan de acción de mejoras, porque permite que el trabajador, pueda generar estrategias en favor de la seguridad y la salud desde su realidad cotidiana. Esto ayuda a que disminuyan las acciones inseguras en que los propios trabajadores incurren.

No debemos olvidar que un buen capacitador pone en juego todo su potencial y procura que los trabajadores se interesen y se comprometan en los procesos de seguridad en el trabajo.

COMPETENCIAS[2]: conjunto de recursos que se ponen en juego al comprometerse en el desempeño cotidiano. Éstas integran conocimientos, habilidades y actitudes que se combinan en el éxito de una tarea.

ENTRENAMIENTO[3]: El entrenamiento es un proceso educativo de corto plazo, orientado a las personas que laboran en un puesto para que desarrollen destrezas y habilidades, asimismo adquieren aptitudes y actitudes adecuadas para el cargo de la organización.

INDUCCIÓN: Método que se utiliza para dar a conocer a los nuevos trabajadores la información básica de la empresa y del cargo a desempeñar. Se contempla inducción general e inducción específica al cargo.

[2] Ibíd, Pág. 86
3 https://psicologiayempresa.com/conceptos-de-capacitacion-entrenamiento-y-educacion.html

REINDUCCIÓN: Método que se utiliza para reforzar y dar a conocer a los antiguos trabajadores, los cambios en la información básica de la organización, de sus procesos y/o del cargo desempeñado.

4. RESPONSABILIDADES

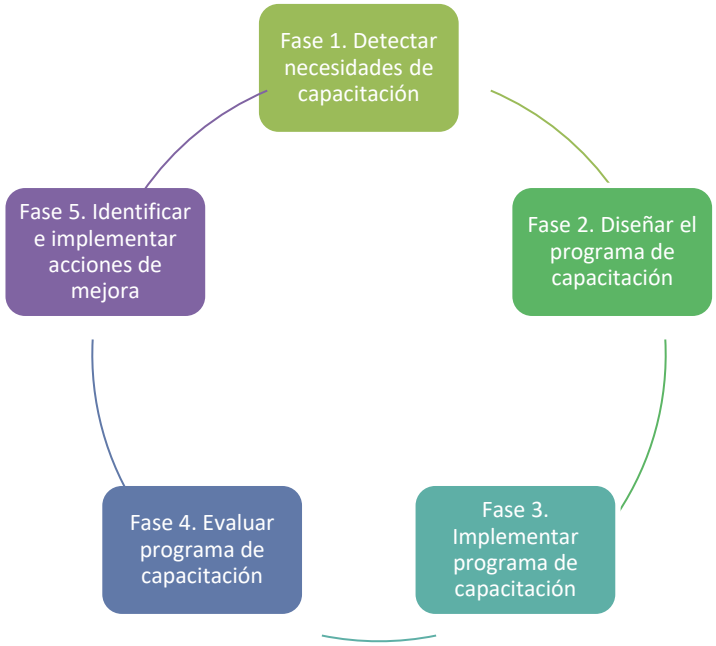
a. Representante Legal – Gerente:

- Facilitar la implementación y cumplimiento del plan de capacitación.
- Proveer los recursos necesarios para su implementación.
- Participar en las actividades de capacitación a las que se le convoquen.

b. Comité Paritario de Seguridad y Salud en el Trabajo, Brigada de emergencias y comité de convivencia laboral:

- Participar en las actividades de capacitación que se les convoque.
- Sugerir temas de capacitación de acuerdo con sus funciones en cada uno de los comités.
- Reproducir las capacitaciones que reciban a sus compañeros de comité y demás personal, cuando así se requiera.

c. Directores y personal de supervisión:



- Participar en las actividades de capacitación que se les convoque.
- Facilitar los tiempos y espacios necesarios para que los trabajadores a su cargo reciban las actividades de capacitación.
- El personal de supervisión participará en la realización de inducción a personal y algunas capacitaciones en las cuales tengan el conocimiento y la competencia necesaria.

d. Trabajadores en general:

- Participar en las actividades de capacitación que convoque la empresa.
- Aplicar a sus actividades diarias los conocimientos adquiridos en las capacitaciones.
- Informar sobre necesidades de capacitación que consideren pueda mejorar su seguridad y salud en el trabajo.

5. METODOLOGÍA

Para la implementación del programa de capacitación, se tendrá en cuenta las siguientes fases:

Fase 1. Detectar necesidades de capacitación (Diagnóstico):

Para la identificación de necesidades de capacitación se tendrán en cuenta las que surjan de:

- Evaluación de desempeño.
- El análisis de la identificación de peligros, evaluación y valoración de riesgos. (Matriz IPEVAR).
- Diagnóstico de condiciones de salud de la población trabajadora y programas de vigilancia epidemiológica a que haya lugar.
- Caracterización de la accidentalidad dentro de un período determinado.
- Investigación de incidentes, accidentes de trabajo y calificación de enfermedad laboral.
- Acciones resultantes de inspecciones de seguridad.
- Análisis del ausentismo general que se presente en todos los centros de trabajo.
- Implementación de programas de gestión de riesgos prioritarios.
- Solicitudes de jefes inmediatos, producto de su supervisión.
- Las demás que sean necesarias de acuerdo a la dinámica y desarrollo del SG-SST y del SGC.

Esta fase está a cargo del responsable del SG-SST y del SGC.

Fase 2. Diseñar programa de capacitación:

Teniendo en cuenta las necesidades identificadas, se determina su objetivo, alcance, población objeto, contenido, metodologías, cronograma lugares, fechas, horarios y todo lo relacionado con la logística necesaria para su ejecución. Se involucra en esta fase al Comité Paritario de Seguridad y Salud en el Trabajo, con quienes se revisará anualmente el programa.

Igualmente, se involucrará al Comité de Convivencia Laboral y Brigada de Emergencias.

Esta fase está a cargo del profesional responsable del SG-SST y aprobación del Gerente respecto del programa y de los recursos requeridos para su ejecución.

Fase 3. Implementar programa de capacitación:

Consiste en el desarrollo de lo planeado en la fase anterior, de acuerdo con cronograma de inducción, reinducción, entrenamiento y capacitación y con los recursos necesarios para su adecuada implementación.

Esta fase está a cargo del responsable del SG-SST, responsable de talento humano, profesionales SST de obras y proyectos, proveedores de la ARL y facilitadores externos de acuerdo con necesidad.

Fase 4. Evaluar programa de capacitación:

El programa de capacitación se evaluará en 2 sentidos:

- Evaluación específica de las actividades realizadas, en la que cada facilitador que imparta inducción, reinducción, capacitación o entrenamiento realizará la evaluación de su eficacia. Durante la ejecución diaria de las actividades laborales en los puestos de trabajo será el jefe inmediato y profesional SST que verificarán la aplicación de conocimientos.

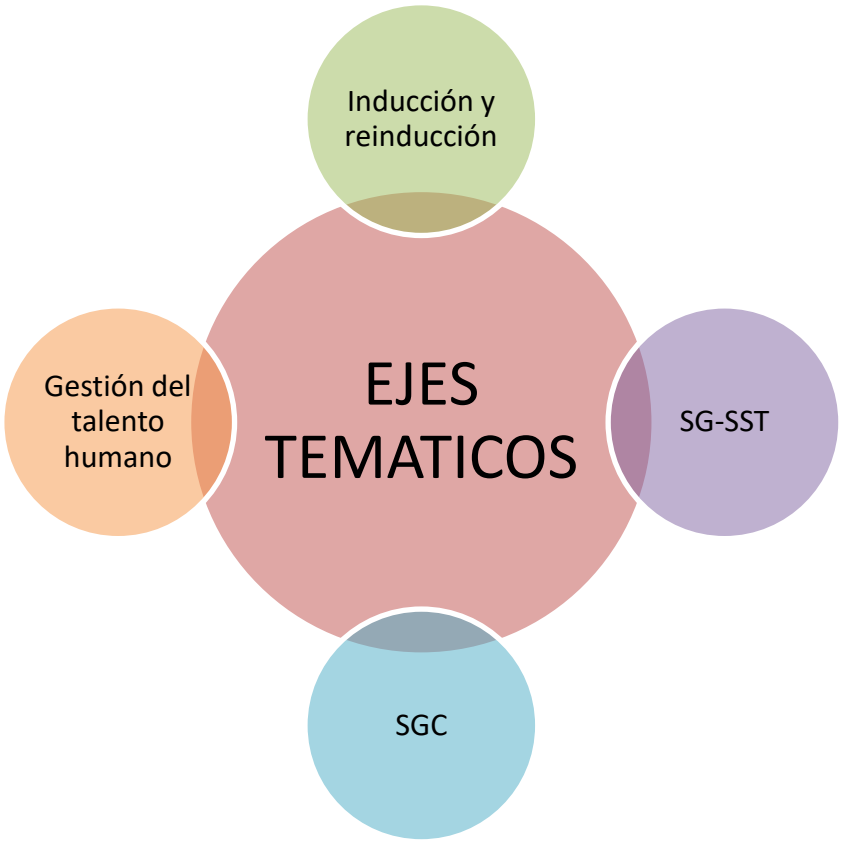
- Revisión y evaluación general del programa de capacitación, en la que se contará con la participación del COPASST y la alta dirección y podrá realizarse a través de reuniones y/o en revisión por la dirección presentando los resultados de acuerdo con los indicadores definidos. Estará a cargo del responsable SST.

Fase 5. Identificar e implementar acciones de mejora:
De acuerdo con los resultados de la fase anterior, se formularán las acciones de mejora que correspondan y se ajustará el programa por lo menos una vez al año que sean acordes con la evaluación realizada y/o nuevos riesgos identificados.

Esta fase estará a cargo del responsable SST y Gerencia.

5.1. ESTRATEGIAS

La metodología a utilizar para el desarrollo del programa de capacitación estará enfocada al desarrollo de estrategias que permitan incentivar la participación de todo el personal a quien van dirigidas las actividades formuladas.
Las siguientes son algunas estrategias a tener en cuenta:



- Capacitación virtual a través de la plataforma virtual de ARL.
- Capacitación presencial de acuerdo con plan de formación de ARL.

- Capacitación presencial por parte del responsable de SST y/o facilitadores externos a través de charlas magistrales, talleres, análisis de casos, etc.
- Entrenamiento (práctica) de acuerdo con necesidad y cronograma establecido.
- Sensibilización a través de correo electrónico.

Para la implementación de las estrategias se tendrá en cuenta nivel educativo del grupo y sus necesidades específicas.

5.2. EJES TEMÁTICOS DE CAPACITACIÓN Y ENTRENAMIENTO

Se presenta a manera general los ejes temáticos de capacitación, los cuales se desarrollan más adelante y son aplicables tanto para el área administrativa, como operativa (obras y proyectos), según necesidad.

Se realizarán las actividades de capacitación de acuerdo con los requisitos de conocimiento y práctica necesarios para los trabajadores de acuerdo al cargo y teniendo en cuenta los riesgos a los cuales van a estar expuestos, tal como se muestra en el anexo 1 Matriz de capacitación.

5.2.1 **Inducción y re inducción**

Los responsables del cumplimiento del eje temático de inducción y re inducción son:

ACTIVIDAD	ÁREA	RESPONSABLE
Inducción, reinducción (General, Seguridad y Salud en el Trabajo, Gestión de Calidad)	Administrativa y personal de nivel de Coordinación y supervisión.	Dir. Desarrollo Organizacional. Participan los responsables de compras, contabilidad y tesorería.
Inducción, reinducción (General, Seguridad y Salud en el Trabajo)	Operativa (Obras y proyectos)	Residentes de Obra y/o Profesional en seguridad y salud en el trabajo en las obras donde se cuente con este apoyo.

La inducción está dirigida a todo el personal que se vincule independientemente de su forma de contratación. Se realiza el mismo día en que el trabajador ingresa a la empresa, con mínimo la siguiente temática que encierra a manera general los ejes temáticos de SG-SST, SGC y talento humano y se realiza en 2 etapas:

a. **Inducción general**: en la cual se tratarán los siguientes temas:

TEMA	AREA EN LA QUE APLICA			RESPONSABLE
	ADMIN.	COORDINACIÓN Y SUPERVISIÓN	OPERATIVA	
Políticas de la empresa: De calidad, de seguridad y salud en el trabajo, de prevención al consumo de alcohol, tabaco y drogas.	X	X	X	Director Desarrollo Organizacional. Residentes de Obra.

Elementos de protección personal por cargo. Entrega, reposición, uso, almacenamiento e higiene		X	X	Director Desarrollo Organizacional. Residentes de Obra.
Tareas críticas, permisos de trabajo, procedimientos trabajo seguro		X	X	Director Desarrollo Organizacional. Residentes de Obra.
Importancia de las Inspecciones de seguridad		X	X	Director Desarrollo Organizacional. Residentes de Obra.

Gestión del cambio, contratación y adquisiciones	X	X		Director Desarrollo Organizacional.
Procedimiento para gestión de compras		X		Asistente de Compras
Procedimientos de contabilidad y tesorería		X		Contador y Tesorero
Especificaciones obra o proyecto a ejecutar, documentación técnica, procedimientos		X		Director de Obra

Hará parte del proceso de inducción, el recorrido por las instalaciones de la empresa u obra, la presentación de los compañeros de trabajo y de los responsables de los procesos con los cuales el trabajador tendrá interrelación.

El proceso de reinducción se realizará a todos los trabajadores por lo menos cada dos años, o antes, en caso que amerite de acuerdo con los cambios que se produzcan. Se hará reinducción además en las siguientes situaciones:

- Cuando se presenten cambios normativos en SST.
- Si el trabajador ha permanecido alejado de su sitio de trabajo por lo menos un período superior a 2 meses, por razones de incapacidad, licencia, vacaciones entre otras situaciones.
- Si se presentan nuevos procedimientos, procesos, reglamentos, instructivos o formatos o se modifican los existentes.
- Si se ha introducido nueva tecnología.
- Si no cumple con los estándares de seguridad.
- Si el trabajador ha sufrido accidentes graves o leves pero repetitivos o se ha presentado esta situación en algún centro de trabajo.

El trabajador tiene la obligación de asistir a la inducción y reinducción de acuerdo con la planeación y requerimientos de la empresa, la asistencia quedará consignada en el formato entrenamiento y capacitación y será evaluada de acuerdo con el formato establecido y/o estrategia adecuada de acuerdo al grupo objetivo.

5.2.2. Seguridad y Salud en el Trabajo

De acuerdo con los riesgos identificados en el área administrativa y en cada obra o proyecto, se realizará capacitación y entrenamiento en la prevención de los diferentes riesgos a los que está expuesto el personal:

a. Peligros y riesgos biológicos

- Socialización del riesgo identificado.
- Protocolo por accidente con riesgo Biológico.
- Protocolo lavado de manos.
- Protocolo de uso seguro de Elementos de Protección Personal (EPP).
- Matriz de EPP.
- Saneamiento básico: manejo adecuado de residuos.

b. Peligros y Riesgos Físicos

- Ruido
- Iluminación
- Radiación (No ionizante)
- Vibración mano brazo y cuerpo entero (si aplica).

c. Peligros y Riesgos químicos

- Socialización inventario de sustancias químicas y hojas de seguridad.
- Programa de Gestión para la Prevención de los Factores de Riesgo Químicos.
- Protocolo de respuesta ante emergencias por derrames de sustancias químicas.
- Uso seguro de Elementos de Protección Personal (EPP).
- Matriz de EPP.

d. Control de los Factores de Riesgos Psicosociales

- Socializar diagnóstico Batería de Riesgo Psicosocial.
- Comunicación asertiva.
- Divulgación manual de convivencia.
- Otras de acuerdo con resultados medición batería.

e. Peligros y Riesgos de Seguridad

- Normas de seguridad en oficina.
- Normas de seguridad en obra.
- Prevención de caídas al mismo nivel.
- Socialización de los Factores de Riesgo Público, protocolos prevención riesgo público
- Seguridad vial - Manejo defensivo para conductores.
- Eléctricos (Baja, media y alta tensión).
- Físico-Químico (Incendio y Explosión).
- Mecánicos: Utilización maquinas, equipos, herramienta manual y mecanizada, cargas en suspensión.
- Locativos.
- Trabajos en Alturas de acuerdo con normatividad vigente.
- Excavaciones.
- Espacios confinados.

- Trabajo seguro con soldadura.
- Orden y Aseo, almacenamiento seguro.
- Señalización y demarcación.
- Procedimientos de trabajo seguro para tareas críticas.

f. Peligros y Riesgos biomecánicos

- Manejo seguro de cargas.
- Movimientos repetitivos miembros superiores.
- Higiene postural.
- Taller de pausa Activa.
- Sensibilización prevención de las Lesiones de Columna
- Programa de Vigilancia Epidemiológica para la prevención de los Desórdenes Músculo Esqueléticos (PVE-DME).

REFERENCIA: CONTRATO N° GGC-089- 2024 – "ADECUACIÓN DE LA OFICINA LOCAL ICA MAGANGUÉ Y MANTENIMIENTO DE LA OFICINA LOCAL ICA EN CARMEN DE BOLIVAR, DEPARTAMENTO DE BOLÍVAR"

ASUNTO: Observación a documentación entregada para el inicio del contrato de obra.

Cordial salud, mediante la presente me permito informar que de no contar con las subsanaciones de las observaciones realizadas a las hojas de vida del personal propuesto mediante oficio **INT-ICA-2024-009, a más tardar a la 1:00 pm**, no será posible alcanzar a validar la información que se encuentra pendiente y por lo tanto no se podrá dar cumplimiento al compromiso adquirido de remitir toda la documentación requerida para el inicio del contrato antes del 1 de noviembre, y de esta manera poder dar inicio al contrato el 1 de noviembre del 2024.

Es preciso anotar, que para dar cumplimiento a los compromisos adquiridos, no basta solo con el envío de la documentación, sino con el envío a satisfacción de la misma, con las subsanaciones que hayan a lugar posterior a la revisión por parte de la interventoría.

Teniendo en cuenta esto, y amparado en las obligaciones estipuladas en el anexo técnico, que indican que una vez el contratista realice el primer envío de las hojas de vida, y la interventoría le realice las observaciones que haya a lugar *(…) el contratista deberá allegar la(s) hojas de vida pendientes dentro de un (1) día hábil siguiente a la comunicación de la interventoría* (…) es que se realiza la presente solicitud de remitir las subsanaciones a mas tardar el día de hoy.

Cordialmente,

JUAN CARLOS JAIMES ACERO

5	NILSON RAFAEL	VILLALBA FLOREZ	1100696400		POSITIVA	NUEVA EPS	NO PRESENTA	NA	NO

Por otra parte, se requiere relacionar el cargo que ocupa cada trabajador para continuar con el respectivo seguimiento.

Además de lo anterior, no se recibió documentación para los profesionales que vamos a relacionar a continuación y que deben ser remitidos de manera inmediata, junto con la subsanación relacionada líneas atrás:

CARGO	NOMBRE DEL PROFESIONAL	N° TARJETA PROFESIONAL	PROFESION
Director de Obra	Javier Felipe Castillo Gutierrez	25202-357196 CND	Ingeniero Civil
Ingeniero Electricista	Sandy Manuel Fortich Madera	AN205-100699	Ingeniero Electricista
Ingeniero Estructural	Climaco Andres Hernandez Montes	22202-201945 COR	Ingeniero Civil
Inspector SISOMA	Loraines María Barrios Campo	Resolución N° 765	Profesional en Salud Ocupacional

Finalmente, cabe mencionar que no se evidencia personal afiliado a la empresa GESTION RURAL Y URBANA SAS, quien contractualmente es quien deberá ejecutar el contrato en mención, por lo tanto, se le recuerda la *"CLAUSULA DECIMA SEGUNDA. - RESPONSABILIDAD: El Contratista es responsable por el cumplimiento de las obligaciones pactadas en el contrato. Además, responderá por los daños generados a la Entidad en la ejecución del contrato, causados por sus Contratistas o empleados, y de sus subcontratistas"* y que el plazo de subsanación es perentorio para autorizar trabajos en sus respectivos frentes.

ASUNTO: Solicitud remisión Informe Quincenal.

Cordial saludo, por medio de la presente, me permito solicitar la remisión del informe técnico quincenal de obra, con el fin de verificar el avance de las actividades durante la primera semana de labores y dar cumplimiento al numeral 23 de las obligaciones específicas del contratista de obra (posteriormente se deberá remitir un informe cada quince días).

Este informe deberá contener la siguiente información:
• Encabezado de la semana: Fecha, número de informe, Periodo.
• Datos contractuales: Contratista, No. Contrato, Objeto, Valor inicial, Valor actualizado, Fecha de Inicio, Fecha de Vencimiento, Prorrogas (detallas todas las prórrogas del contrato), Suspensiones, Interventor.
• Control de Programación: porcentaje de obra programado, porcentaje de obra ejecutado, porcentaje acumulado de obra tanto del programado como el ejecutado.
• Control presupuesto: valor de obra programado, valor de obra ejecutado, valor de obra acumulado tanto del programado como del ejecutado.
• Actividades realizadas en la semana.
• Resumen Ejecutivo del contrato.
• Personal y equipo en obra.
• Registro fotográfico del antes y el después.
• Gestión de los tramites contractuales.

Se solicita la entrega del primer informe quincenal con corte al día martes 12 de noviembre de 2024.

ASUNTO: SOLICITUD DE ENTREGA DE INFORMACION TECNICA

Cordial saludo,

Por medio de la presente, me permito solicitar la entrega levantamiento de la cubierta existente, con el fin de conocer la estructura actual y lograr determinar, junto con un informe y el conceto de si se requiere o no un reforzamiento para la instalación de la teja nueva. Además de lo anterior puntualmente nos permitimos citar de su anexo técnico que se debe cumplir con:

• El contratista deberá realizar un levantamiento de la cubierta existente, con el fin de conocer la estructura actual y lograr determinar, si se requiere o no un reforzamiento para la instalación de la teja nueva. Todo esto se deberá presentar en un informe.

• El contratista a partir del levantamiento de la estructura de la cubierta y el predimensionamiento estructural entregado por la entidad, deberá realizar los ajustes, actualizaciones y/o rediseño necesario para darle cumplimiento a las condiciones actuales del sitio y a la normativa vigente. El insumo producto de esta obligación debe estar aprobado por la interventoría.

Además de lo anterior, para la correcta atención del componente técnico estructural se debe atender desde la especialidad eléctrica lo siguiente:

• En caso de que se requiera alguna modificación en el diseño eléctrico de las redes presentado por la entidad, el contratista con su personal mínimo de trabajo deberá realizar las modificaciones, ajustes o rediseños necesarios para darle cumplimiento a las condiciones del sitio y la normativa vigente. El insumo producto de esta obligación debe estar aprobado por la interventoría.

• Cuando se vaya a realizar trabajos de obra en áreas donde existan líneas eléctricas, se debe informar con el fin de buscar el acompañamiento.

Finalmente, se le recuerda al ejecutor que dentro de sus obligaciones debe cumplir con "*Una vez perfeccionado el contrato se emitirá el acta de inicio del contrato fecha en la que se iniciará el tiempo de*

desarrollo del mismo y según lo establecido en los pliegos de condiciones, el Contratista de obra tendrá hasta CINCO (5) DÍAS HÁBILES contados a partir de la firma del contrato y anterior al acta de inicio para presentar documentación del equipo de trabajo, informe diagnóstico, análisis de precios unitarios, cronograma detallado, plan de manejo ambiental, y seguridad y salud en el trabo e informe de cubierta detallado.", por lo anterior, sírvase finalizar con las entregas que tiene pendientes de manera inmediata, más aun teniendo en cuenta que sus ejecuciones en dependen de la aprobación de varios de estos entregables.

Quedamos atentos a la entrega de lo anteriormente solicitado.

ASUNTO: REQUERIMIENTOS CONTRACTUALES DEL AREA SST Y AMBIENTAL

Cordial saludo,

Teniendo en cuenta las obligaciones contractuales establecidas y los requerimientos necesarios para garantizar el cumplimiento de la normatividad legal vigente en materia de Seguridad y Salud en el trabajo y Medio ambiente, la interventoría solicita:

- PLAN DE MANEJO AMBIENTAL

Este documento debe contener las medidas y actividades necesarias para prevenir, mitigar, corregir o compensar los impactos y efectos ambientales generados por el desarrollo de las actividades del contrato en mención.

Así mismo, se sugiere considerar las actividades a implementar para el manejo de residuos de construcción y/o demolición, así como aquellos residuos que requieren un manejo y disposición especial. Además de esto, se deberá incluir el programa de manejo de materiales obtenidos, el cual debe cumplir con lo mencionado en el "CONTRATO CELEBRADO ENTRE EL INSTITUTO COLOMBIANO AGROPECUARIO – ICA Y GESTIÓN RURAL Y URBANA S.A.S." CLÁUSULA OCTAVA – OBLIGACIONES DEL CONTRATISTA, literal B ESPECIFICAS, NUMERAL 9 "Responder por la obtención de todo lo relacionado con las fuentes de materiales de construcción necesarias para la ejecución de la obra contratada y la obtención legal y oportuna de todos los materiales y suministros que se requieran para la construcción de la obra (…)"

Es importante mencionar, que dichos programas deberán ser aplicados durante la ejecución de la obra y estarán sujetos a verificación y control por parte de la interventoría.

- SEGURIDAD Y SALUD EN EL TRABAJO

Por otra parte, considerando lo establecido en el ANEXO 1. ANEXO TÉCNICO: ESPECIFICACIONES TÉCNICAS, se requiere especial atención a los siguientes requerimientos:

a. Los empleados del contratista están obligados a utilizar indumentaria uniforme en las condiciones aprobadas por la interventoría.
b. El contratista deberá presentar al interventor el registro del nuevo personal a ingresar para los respectivos estudios de seguridad y posterior aprobación, para esto, es necesario entregar una relación de personal actualizado que cuente con su documentación de ingreso completa y vigente
c. El contratista, deberá mantener actualizada y a la vista el listado de personal, con su respectiva EPS, ARL y seguros colectivos de existir, con teléfono de contacto y de emergencia.

Así mismo, en dicho documento se menciona la siguiente solicitud que, a la fecha la interventoría no ha podido verificar:

"Una vez firmada el acta de inicio del contrato de obra, se deberá diligenciar y entregar a la interventoría y supervisión del contrato, los siguientes documentos, los cuales serán remitidos a la Oficina de Salud Ocupacional.

1. *Carta de compromiso de cumplimiento como contratistas"*

Por esto, se requiere la entrega inmediata de dicho documento.

Para el siguiente punto mencionado en la documentación contractual:

"2. Matriz de cumplimiento de requisitos en seguridad y salud en el trabajo para contratistas jurídicos, en el cual deberá presentar la siguiente información:

Trabajo en alturas:
Programa de Protección Contra caídas
Procedimiento para la atención y rescate en alturas
Certificado de formación o competencia laboral de las personas que realizaran trabajo en alturas.
Certificado del trabajador de trabajo en alturas
Certificado de calidad y registros de inspecciones de los equipos de protección contra caídas y de los sistemas de acceso a utilizar"

Se evidencia la entrega de la MATRIZ DE IDENTIFICACIÓN DE PELIGROS, EVALUACIÓN Y VALORACIÓN DE RIESGOS, la cual evalúa los riesgos asociados a las actividades a ejecutar para el presente proyecto, así mismo, cumple con la entrega del programa de protección contra caídas, con los PROCEDIMIENTOS OPERATIVOS NORMALIZADOS (PON) el cual incluye el procedimiento de atención y rescate en alturas.

Cabe mencionar que, durante el desarrollo de actividades, se evidenció la entrega de certificados de trabajador autorizado para alturas, sin embargo, se reitera que todo el personal que este programado para realizar labores criticas como lo es el trabajo en alturas, debe contar con el certificado de idoneidad vigente. Además de esto, se solicita la entrega de permisos diligenciados para trabajo en alturas, análisis de trabajo seguro de cada actividad y certificaciones e inspecciones de equipos y elementos utilizados para dichas actividades (andamios, arnés, eslingas, conectores, líneas de vida, frenos y demás que se usen en campo)

Por otra parte, se requiere realizar las actividades de obra teniendo en cuenta *"el procedimiento de ejecución"* establecido en el anexo técnico para cada ítem, los cuales incorporan las medidas de SEGURIDAD Y SALUD EN EL TRABAJO para el desarrollo del contrato.

Conjuntamente, se solicita la entrega de los soportes necesarios para dar cumplimiento a la siguiente obligación contractual, la cual se encuentra establecida en la CLÁUSULA OCTAVA – OBLIGACIONES DEL CONTRATISTA del "CONTRATO CELEBRADO ENTRE EL INSTITUTO COLOMBIANO AGROPECUARIO – ICA Y GESTIÓN RURAL Y URBANA S.A.S." donde se dispone en su numeral 13. Lo siguiente: *"Destinar a la ejecución del contrato, en un porcentaje mínimo del 5%, sin perjuicio de que el contratista incorpore un porcentaje superior al definido por la Entidad, la provisión de bienes o servicios por parte de alguno o algunos de los siguientes sujetos de especial protección constitucional: población en pobreza extrema, desplazados por la violencia, personas en proceso de reintegración o reincorporación, víctimas de conflicto armado interno, mujeres cabeza de hogar, adultos mayores, personas en condición de discapacidad, así como la población de las comunidades indígena, negra, afrocolombiana, raizal, palanquera, Rrom o gitana, entre otros sujetos identificados por la Ley o la jurisprudencia de esta manera. (…). El cumplimiento de esta obligación deberá probarse ante al supervisor y/o interventor dentro de los tres (3) días hábiles siguientes contados a partir de la firma del acta de inicio. (…)*
El porcentaje de sujetos mencionados incorporados a la ejecución del contrato deberá mantenerse durante toda su vigencia en el porcentaje mínimo establecido en este numeral, so pena del incumplimiento contractual"

Para la acreditación de dicha obligación se debe aplicar lo dispuesto en el artículo 2.2.1.2.4.2.17 del Decreto 1082 de 2015.

Así lo expuesto, se solicita la atención a los puntos anteriormente mencionados.

Cordialmente,

JUAN CARLOS JAIMES ACERO

ASUNTO: SOLICITUD DE ENTREGA DE INFORMACION

Cordial saludo,

Por medio de la presente, me permito solicitar en cumplimiento de nuestras obligaciones nos permitimos los pendientes que deben ser cerradas de manera inmediata, citando su anexo técnico y demás obligaciones que ha día de hoy ya deberían estar entregadas y aprobadas, para dar por cumplidas las mismas:

- *El cuadro de cuadrillas se realizará según tipo (albañilería, carpintería en madera, pinturas, etc.), señalando su conformación (oficiales, ayudantes, etc.). Se indicará el valor del salario, éste y sus componentes deben ajustarse a lo establecido por la ley, el resultado deberá expresarse en jornal (la remuneración de un día de trabajo) y será trasladado a la casilla de mano de obra en los APU. Las cuadrillas tipo a utilizar deben estar de acuerdo con la actividad a desarrollar para cada actividad. Solo se aceptará una cuadrilla por especialidad en cada APU, es decir no pueden existir 2 o más cuadrillas iguales en un mismo APU, pero si es posible que un APU necesite el empleo de varias cuadrillas de distinto género.*

- *Este documento fue entregado por el contratista de obra y avalado por la interventoría. Sin embargo, se evidencia una falencia en el inicio, dado que la fecha del cronograma esta a partir del 01 de noviembre, y el acta de inicio del contrato es del 02 de noviembre, se solicita ajustar.*

- *Destinar a la ejecución del contrato, en un porcentaje mínimo del 5%, sin perjuicio de que el contratista incorpore un porcentaje superior al definido por la Entidad, la provisión de bienes o servicios por parte de alguno o algunos de los siguientes sujetos de especial protección constitucional: población en pobreza extrema, desplazados por la violencia, personas en proceso de reintegración o reincorporación, víctimas de conflicto armado interno, mujeres cabeza de hogar, adultos mayores, personas en condición de discapacidad, así como la población de las comunidades indígena, negra, afrocolombiana, raizal, palanquera, Rrom o gitana, entre otros sujetos identificados por la Ley o la jurisprudencia de esta manera. El porcentaje de sujetos mencionados incorporados a la ejecución del contrato deberá mantenerse durante toda*

- *Presentar al interventor informes quincenales del avance de obra, mensuales e informe final de obra en medio magnético. La información mínima que debe contener cada informe se encuentra especificado en el ANEXO No. 01 – ANEXO TÉCNICO*

- *Efectuar la socialización con las partes interesadas del entorno del contrato (numeral 5.4 del anexo técnico).*

- *Documentos de salud ocupacional: Carta de compromiso de cumplimiento como contratista y matriz de cumplimiento de requisitos en seguridad y salud en el trabajo (numeral 6.9 del anexo técnico).*

- *La entidad no ha recibido el plan detallado de trabajo exigido en el Plan detallado de trabajo (numeral 4.1 del Anexo Técnico)*

Además, es obligación de presentar cada comité el siguiente producto:

El Contratista se compromete a realizar una presentación en formato digital semanal ante los comités pertinentes, detallando el progreso de la obra en los aspectos financieros, administrativos, de seguridad y salud ocupacional (SST), así como en los temas ambientales. Esta presentación deberá incluir información fotográfica actualizada y detallada sobre el estado de avance en cada una de estas áreas, proporcionando a los comités una visión integral del desarrollo del proyecto

Finalmente, se le recuerda al ejecutor que dentro de sus obligaciones debe cumplir con "*Una vez perfeccionado el contrato se emitirá el acta de inicio del contrato fecha en la que se iniciará el tiempo de desarrollo del mismo y según lo establecido en los pliegos de condiciones, el Contratista de obra tendrá hasta CINCO (5) DÍAS HÁBILES contados a partir de la firma del contrato y anterior al acta de inicio para presentar documentación del equipo de trabajo, informe diagnóstico, análisis de precios unitarios, cronograma detallado, plan de manejo ambiental, y seguridad y salud en el trabo e informe de cubierta detallado.",* por lo anterior, se reitera que se debe finalizar con las entregas que tiene pendientes de manera inmediata, más aun teniendo en cuenta que el cumplimiento de sus obligaciones puede verse afectado, derivando en tramites alternos.

Quedamos atentos a la entrega de lo anteriormente solicitado.

ASUNTO: Ejecución de actividades sin autorización de la interventoría.

Cordial saludo,

Por medio de la presente, nos permitimos comunicar, en cumplimiento de nuestras obligaciones, que en el frente de Magangué se están ejecutando actividades que aún no cuentan con el aval y/o aprobación por parte del equipo de interventoría, tal como quedó registrado en el libro de obra. Por lo anterior, se recuerda que dichas actividades se realizan bajo la responsabilidad y riesgo del contratista, considerando la posibilidad de que no sean recibidas.

Lo anterior se señala debido a los trabajos en curso relacionados con el figurado de acero para cerramiento. A pesar de que la interventoría solicitó no iniciar estas actividades hasta contar con la aprobación de la propuesta estructural, dichas labores se están desarrollando actualmente. Es importante destacar que la labor de la interventoría no es de carácter policivo. Asimismo, se recalca que dentro de las obligaciones contractuales se incluye la **Cláusula Décima Cuarta**, que podría hacerse efectiva ante la omisión de las órdenes emitidas por la interventoría. Por consiguiente, si se requiere alguna modificación en los trabajos realizados, estas ejecuciones podrían no ser recibidas o podrían aceptadas y pagadas conforme al despiece estructural finalmente aprobado.

Quedamos atentos a su respuesta.

ASUNTO: SOLICITUD DE APORTES A SEGURIDAD SOCIAL DEL TRABAJADOR SANDY MANUEL FORTICH MADERA

Cordial saludo,

Por medio de la presente me permito solicitar la entrega inmediata de la planilla de aportes a seguridad social del trabajador SANDY MANUEL FORTICH MADERA quien desempeña el cargo de INGENIERO ELECTRICISTA el cual se encuentra vinculado por medio de la empresa VITAURBANA S.A.S.

Teniendo en cuenta las fechas establecidas de pagos a seguridad social y el documento de identificación de la empresa, esta debió ser pagada el día 19 de noviembre de 2024

Por otra parte, es importante mencionar y recodar que la empresa GESTIÓN RURAL Y URBANA S.A.S en calidad de contratista debe realizar sus aportes a seguridad social el día 26 de noviembre de 2024, esto con el objetivo de realizar un envió oportuno en las fechas establecidas.

Quedamos atentos a la entrega de dicha documentación.

ASUNTO: Requerimiento de la interventoría del CONTRATO N° GGC-089- 2024 por presunto incumplimiento para el contrato de la referencia

Respetado Ingeniero,

Dentro de la ejecución del contrato de Obra N° GGC-089- 2024 suscrito entre la **EL INSTITUTO COLOMBIANO AGROPECUARIO – ICA y GESTIÓN RURAL Y URBANA S.A.S.,** que tiene como objeto **"ADECUACIÓN DE LA OFICINA LOCAL ICA MAGANGUÉ Y MANTENIMIENTO DE LA OFICINA LOCAL ICA EN CARMEN DE BOLIVAR, DEPARTAMENTO DE BOLÍVAR",** por medio de la presente nos permitimos solicitarle el inicio de las acciones que aplican, de acuerdo con la información que se relacionan a continuación:

1. INFORMACIÓN GENERAL DEL CONTRATO

CONTRATO:	GGC-089-2024
OBJETO:	**"ADECUACIÓN DE LA OFICINA LOCAL ICA MAGANGUÉ Y MANTENIMIENTO DE LA OFICINA LOCAL ICA EN CARMEN DE BOLIVAR, DEPARTAMENTO DE BOLÍVAR"**
CONTRATISTA:	**GESTIÓN RURAL Y URBANA S.A.S.**
REPRESENTANTE LEGAL:	**GILDARDO CASTILLO SANCHEZ**
FECHA DE INICIO:	02 DE NOVIEMBRE DE 2024
FECHA DE TERMINACIÓN:	CUATRO (4) MESES O HASTA EL 31 DE DICIEMBRE DE 2024
VALOR:	MIL CIENTO CUARENTA Y DOS MILLONES QUINIENTOS DOCE MIL SETECIENTOS NUEVE PESOS M/CTE ($1.142.512.709,00)
ALCANCE Y ACTIVIDADES ESPECIFICAS	El Contratista deberá desarrollar el objeto del Contrato de conformidad con las especificaciones y características técnicas señaladas en los Documentos del proceso de LICITACIÓN PÚBLICA No. GC- LP-064-2024, los cuales hacen parte integral del presente contrato. El Contratista se obliga para con la Entidad a ejecutar, a los

	precios cotizados en la propuesta y con sus propios medios: materiales, maquinaria, laboratorios, equipos y personal, en forma independiente y con plena autonomía técnica y administrativa, hasta su total terminación y aceptación final, las cantidades de obra que se detallan en su propuesta económica, conforme lo señaló en el FORMULARIO No. 01 – FORMULARIO DE PROPUESTA ECONÓMICA.

2. HECHOS O RAZONES QUE FUNDAMENTAN EL REQUERIMIENTO

La interventoría en cumplimiento de sus obligaciones y de acuerdo con las exigencias del Contrato de obra N° GGC-089- 2024, se permite informar acerca del posible incumplimiento de sus obligaciones correspondientes al contrato en mención, toda vez que se tienen pendientes que deben ser cerrados de manera inmediata. Por lo anterior, citamos su anexo técnico y demás obligaciones que a hoy ya deberían estar entregadas y aprobadas, para dar por cumplidas las mismas, pero a la fecha continúan pendientes:

- No se ha remitido el cuadro de cuadrillas que debe cumplir con *"realizará según tipo (albañilería, carpintería en madera, pinturas, etc.), señalando su conformación (oficiales, ayudantes, etc.). Se indicará el valor del salario, éste y sus componentes deben ajustarse a lo establecido por la ley, el resultado deberá expresarse en jornal (la remuneración de un día de trabajo) y será trasladado a la casilla de mano de obra en los APU. Las cuadrillas tipo a utilizar deben estar de acuerdo con la actividad a desarrollar para cada actividad. Solo se aceptará una cuadrilla por especialidad en cada APU, es decir no pueden existir 2 o más cuadrillas iguales en un mismo APU, pero si es posible que un APU necesite el empleo de varias cuadrillas de distinto género."*

- La programación fue entregada por el contratista de obra y avalado por la interventoría. Sin embargo, se evidencia que el inicio del cronograma está a partir del 01 de noviembre, y el acta de inicio del contrato es del 02 de noviembre, se solicita ajustar.

- No se han remitido los documentos que permitan verificar que se destinó *para la ejecución del contrato, en un porcentaje mínimo del 5%, sin perjuicio de que el contratista incorpore un porcentaje superior al definido por la Entidad, la provisión de bienes o servicios por parte de alguno o algunos de los siguientes sujetos de especial protección constitucional: población en pobreza extrema, desplazados por la violencia, personas en proceso de reintegración o reincorporación, víctimas de conflicto armado interno, mujeres cabeza de hogar, adultos mayores, personas en condición de discapacidad, así como la población de las comunidades indígena, negra, afrocolombiana, raizal, palanquera, Rrom o gitana, entre otros sujetos identificados por la Ley o la jurisprudencia de esta manera. El porcentaje de sujetos mencionados incorporados a la ejecución del contrato deberá mantenerse durante toda*

- No se han remitido al interventor informes quincenales del avance de obra, mensuales e informe final de obra en medio magnético. La información mínima que debe contener cada informe se encuentra especificado en el ANEXO No. 01 – ANEXO TÉCNICO

- No se han remitido los documentos que permitan verificar que se realizó *la socialización con las partes interesadas del entorno del contrato (numeral 5.4 del anexo técnico).*

- No se han remitido los documentos *de salud ocupacional: Carta de compromiso de cumplimiento como contratista y matriz de cumplimiento de requisitos en seguridad y salud en el trabajo (numeral 6.9 del anexo técnico).*

- No se ha *recibido el plan detallado de trabajo exigido en el Plan detallado de trabajo (numeral 4.1 del Anexo Técnico)*

- Además, es obligación de presentar cada comité el siguiente producto *"realizar una presentación en formato digital semanal ante los comités pertinentes, detallando el progreso de la obra en los aspectos financieros, administrativos, de seguridad y salud ocupacional (SST), así como en los temas ambientales. Esta presentación deberá incluir información fotográfica actualizada y detallada sobre el estado de avance en cada una de estas áreas, proporcionando a los comités una visión integral del desarrollo del proyecto"* y a la fecha en los dos comités técnicos semanales, no se ha realizado.

3. DOCUMENTOS Y SOPORTES

A continuación, se relacionan las evidencias que sustentan el posible incumplimiento en el que ha incurrido el contratista en orden cronológico. Se adjunta dicha evidencia en el Anexo 1:

FECHA	CONSECUTIVO	ASUNTO
6-nov-24	INT-ICA-2024-016	Solicitud de listado de personal
8-nov-24	INT-ICA-2024-018	Solicitud remisión Informe Quincenal.
18-nov-24	INT-ICA-2024-022	Solicitud de listado de personal
19-nov-24	INT-ICA-2024-023	Solicitud entrega de programas HSEQ
19-nov-24	INT-ICA-2024-024	Solicitud entrega información técnica
19-nov-24	INT-ICA-2024-025	Solicitud cumplimiento de obligaciones contractuales
20-nov-24	INT-ICA-2024-027	Requerimientos contractuales del area SST y ambiental
20-nov-24	INT-ICA-2024-028	Slicitud entrega de innformación
21-nov-24	INT-ICA-2024-029	Ejecución de actividades sin autorización de la interventoría.

4. POSIBLE TASACIÓN DE APREMIO FASE

De acuerdo con su ***CLAUSULA DECIMA CUARTA. - MULTAS:*** *El ICA tendrá la facultad de imponer multas en caso de incumplimiento de las obligaciones a cargo del CONTRATISTA de conformidad con lo dispuesto por el Artículo 17° de la Ley 1150 de 2007, el Artículo 86° de la Ley 1474 de 2011 (Estatuto Anticorrupción) y el Artículo 2.2.1.2.3.1.19 del Decreto 1082 de 2015, Ley 1882 de 2018,* por lo tanto, de no remitir de manera inmediata lo solicitado en el debido estado para ser recibido a satisfacción, fundamentado en:

CAUSALES:

3. Si el Contratista no entrega la información completa que le solicite el interventor, que se relacione con el objeto del contrato, dentro de los plazos y en los términos de cada requerimiento, se causará una multa equivalente al 0,2% del valor del contrato. Estas multas se causarán sucesivamente por cada día de atraso, hasta cuando el Contratista demuestre que corrija el incumplimiento respectivo a satisfacción del interventor.

7. Por incumplir el ofrecimiento otorgado en cuanto al factor calidad, al Contratista se le impondrá una multa equivalente al 0,5% del valor del contrato, por cada día calendario de atraso en el cumplimiento de dicha obligación.

Causal	Porcentaje	$ 1.142.512.709,00	Dias de atraso	Valor total
3. Si el Contratista no entrega la información completa que le solicite el interventor *(…)*	0,2%	$ 2.285.025,42	4,00	$ 9.140.101,67
Comentarios Presentar al interventor informes quincenales del avance de obra, mensuales e informe final de obra en medio magnético. La información mínima que debe contener cada informe se encuentra especificado en el ANEXO No. 01 – ANEXO TÉCNICO				
7. Por incumplir el ofrecimiento otorgado *(…)*	0,5%	$ 5.712.563,55	12,00	$ 68.550.762,54
Comentarios Documentos de salud ocupacional: Carta de compromiso de cumplimiento como contratista y matriz de cumplimiento de requisitos en seguridad y salud en el trabajo (numeral 6.9 del anexo técnico).				
			TOTAL	**$ 77.690.864,21**

Si bien la tasación está señalada en el cuadro anterior, esta no puede superar la suma de $ 57.125.635,45

5. CONCEPTO DE INTERVENTORÍA POSIBLE APREMIO

Teniendo en cuenta lo señalado líneas atrás, se le indica al ejecutor que dentro de sus obligaciones debe cumplir con "*Una vez perfeccionado el contrato se emitirá el acta de inicio del contrato fecha en la que se iniciará el tiempo de desarrollo del mismo y según lo establecido en los pliegos de condiciones, el Contratista de obra tendrá hasta CINCO (5) DÍAS HÁBILES contados a partir de la firma del contrato y anterior al acta de inicio para presentar documentación del equipo de trabajo, informe diagnóstico, análisis de precios unitarios, cronograma detallado, plan de manejo ambiental, y seguridad y salud en el trabo e informe de cubierta detallado.",* además que a la fecha no tiene acumulado varios de los compromiso de comité sin entender dentro de los plazos dados para el cierre. Por lo anterior, se reitera que se debe finalizar con las entregas que tiene pendientes de manera inmediata, más aún, teniendo en cuenta que el cumplimiento de sus obligaciones puede verse afectado, por POSIBLE **TASACIÓN DE APREMIO FASE1,** del numeral anterior.

Quedamos atentos a la entrega de lo anteriormente solicitado.

ASUNTO: Solicitud de listado de personal

Cordial saludo,

La interventoría en cumplimiento de sus obligaciones realiza la revisión correspondiente a la documentación remitida para el ingreso de personal, así mismo, se aplicaron los lineamientos establecidos por la supervisión para TODO EL PERSONAL vinculado al proyecto donde se generaron las siguientes observaciones:

FRENTE DE TRABAJO: CARMEN DE BOLIVAR

1. ALBERTO CARLOS CASTILLO CONTRERAS:

Se requiere el examen periódico ocupacional, dado que el soporte remitido tiene fecha de realización del mes de octubre de 2023, además se debe tener en cuenta que el trabajador está expuesto a un riesgo laboral V.

2. IVAN JOE CARRASCAL MANJARRES

Se requiere el examen periódico ocupacional, dado que el soporte remitido tiene fecha de realización del mes de octubre de 2023, además se debe tener en cuenta que el trabajador está expuesto a un riesgo laboral V.

3. OSCAR CASTRO CONTRERAS

No se evidencia el soporte de examen ocupacional de ingreso
No se presenta soporte de afiliación a AFP

4. MAIRA ANDREA ROMANI SIMANCA

No se evidencia el soporte de examen ocupacional de ingreso

5. MARISOL OSORIO TORRES

No se presenta ningún soporte

FRENTE DE TRABAJO: MAGANGUE

1. AQUILIO OLEA MARTINEZ

No se evidencia el soporte de examen ocupacional de ingreso
No se presenta soporte de afiliación a AFP

2. JORGE SIERRA FALCO

No se evidencia el soporte de examen ocupacional de ingreso
No se presenta soporte de afiliación a AFP

3. KAREN ARIAS GUERRA

No se evidencia el soporte de examen ocupacional de ingreso

4. WILLIAM SIERRA FRANCO

No se evidencia el soporte de examen ocupacional de ingreso
No se presenta soporte de afiliación a AFP

5. NILSON VILLALBA FLOREZ

No se evidencia el soporte de examen ocupacional de ingreso
No se presenta soporte de afiliación a AFP

Teniendo en cuenta lo anterior, la interventoría relaciona a continuación quien se encuentra autorizado y quien no para ingreso e inicio de actividades en obra:

ASUNTO: SOLICITUD DE ENTREGA DE INFORMACION TECNICA

Cordial saludo,

Por medio de la presente, me permito solicitar la entrega levantamiento de la cubierta existente, con el fin de conocer la estructura actual y lograr determinar, junto con un informe y el conceto de si se requiere o no un reforzamiento para la instalación de la teja nueva. Además de lo anterior puntualmente nos permitimos citar de su anexo técnico que se debe cumplir con:

• El contratista deberá realizar un levantamiento de la cubierta existente, con el fin de conocer la estructura actual y lograr determinar, si se requiere o no un reforzamiento para la instalación de la teja nueva. Todo esto se deberá presentar en un informe.

• El contratista a partir del levantamiento de la estructura de la cubierta y el predimensionamiento estructural entregado por la entidad, deberá realizar los ajustes, actualizaciones y/o rediseño necesario para darle cumplimiento a las condiciones actuales del sitio y a la normativa vigente. El insumo producto de esta obligación debe estar aprobado por la interventoría.

Además de lo anterior, para la correcta atención del componente técnico estructural se debe atender desde la especialidad eléctrica lo siguiente:

• En caso de que se requiera alguna modificación en el diseño eléctrico de las redes presentado por la entidad, el contratista con su personal mínimo de trabajo deberá realizar las modificaciones, ajustes o rediseños necesarios para darle cumplimiento a las condiciones del sitio y la normativa vigente. El insumo producto de esta obligación debe estar aprobado por la interventoría.

• Cuando se vaya a realizar trabajos de obra en áreas donde existan líneas eléctricas, se debe informar con el fin de buscar el acompañamiento.

Finalmente, se le recuerda al ejecutor que dentro de sus obligaciones debe cumplir con "*Una vez perfeccionado el contrato se emitirá el acta de inicio del contrato fecha en la que se iniciará el tiempo de*

desarrollo del mismo y según lo establecido en los pliegos de condiciones, el Contratista de obra tendrá hasta CINCO (5) DÍAS HÁBILES contados a partir de la firma del contrato y anterior al acta de inicio para presentar documentación del equipo de trabajo, informe diagnóstico, análisis de precios unitarios, cronograma detallado, plan de manejo ambiental, y seguridad y salud en el trabo e informe de cubierta detallado.", por lo anterior, sírvase finalizar con las entregas que tiene pendientes de manera inmediata, más aun teniendo en cuenta que sus ejecuciones en dependen de la aprobación de varios de estos entregables.

Quedamos atentos a la entrega de lo anteriormente solicitado.

ASUNTO: REQUERIMIENTOS CONTRACTUALES DEL AREA SST Y AMBIENTAL

Cordial saludo,

Teniendo en cuenta las obligaciones contractuales establecidas y los requerimientos necesarios para garantizar el cumplimiento de la normatividad legal vigente en materia de Seguridad y Salud en el trabajo y Medio ambiente, la interventoría solicita:

- PLAN DE MANEJO AMBIENTAL

Este documento debe contener las medidas y actividades necesarias para prevenir, mitigar, corregir o compensar los impactos y efectos ambientales generados por el desarrollo de las actividades del contrato en mención.

Así mismo, se sugiere considerar las actividades a implementar para el manejo de residuos de construcción y/o demolición, así como aquellos residuos que requieren un manejo y disposición especial. Además de esto, se deberá incluir el programa de manejo de materiales obtenidos, el cual debe cumplir con lo mencionado en el "CONTRATO CELEBRADO ENTRE EL INSTITUTO COLOMBIANO AGROPECUARIO – ICA Y GESTIÓN RURAL Y URBANA S.A.S." CLÁUSULA OCTAVA – OBLIGACIONES DEL CONTRATISTA, literal B ESPECIFICAS, NUMERAL 9 "Responder por la obtención de todo lo relacionado con las fuentes de materiales de construcción necesarias para la ejecución de la obra contratada y la obtención legal y oportuna de todos los materiales y suministros que se requieran para la construcción de la obra (…)"

Es importante mencionar, que dichos programas deberán ser aplicados durante la ejecución de la obra y estarán sujetos a verificación y control por parte de la interventoría.

- SEGURIDAD Y SALUD EN EL TRABAJO

Por otra parte, considerando lo establecido en el ANEXO 1. ANEXO TÉCNICO: ESPECIFICACIONES TÉCNICAS, se requiere especial atención a los siguientes requerimientos:

a. Los empleados del contratista están obligados a utilizar indumentaria uniforme en las condiciones aprobadas por la interventoría.
b. El contratista deberá presentar al interventor el registro del nuevo personal a ingresar para los respectivos estudios de seguridad y posterior aprobación, para esto, es necesario entregar una relación de personal actualizado que cuente con su documentación de ingreso completa y vigente
c. El contratista, deberá mantener actualizada y a la vista el listado de personal, con su respectiva EPS, ARL y seguros colectivos de existir, con teléfono de contacto y de emergencia.

Así mismo, en dicho documento se menciona la siguiente solicitud que, a la fecha la interventoría no ha podido verificar:

"Una vez firmada el acta de inicio del contrato de obra, se deberá diligenciar y entregar a la interventoría y supervisión del contrato, los siguientes documentos, los cuales serán remitidos a la Oficina de Salud Ocupacional.

1. *Carta de compromiso de cumplimiento como contratistas"*

Por esto, se requiere la entrega inmediata de dicho documento.

Para el siguiente punto mencionado en la documentación contractual:

"2. Matriz de cumplimiento de requisitos en seguridad y salud en el trabajo para contratistas jurídicos, en el cual deberá presentar la siguiente información:

Trabajo en alturas:
Programa de Protección Contra caídas
Procedimiento para la atención y rescate en alturas
Certificado de formación o competencia laboral de las personas que realizaran trabajo en alturas.
Certificado del trabajador de trabajo en alturas
Certificado de calidad y registros de inspecciones de los equipos de protección contra caídas y de los sistemas de acceso a utilizar"

Se evidencia la entrega de la MATRIZ DE IDENTIFICACIÓN DE PELIGROS, EVALUACIÓN Y VALORACIÓN DE RIESGOS, la cual evalúa los riesgos asociados a las actividades a ejecutar para el presente proyecto, así mismo, cumple con la entrega del programa de protección contra caídas, con los PROCEDIMIENTOS OPERATIVOS NORMALIZADOS (PON) el cual incluye el procedimiento de atención y rescate en alturas.

Cabe mencionar que, durante el desarrollo de actividades, se evidenció la entrega de certificados de trabajador autorizado para alturas, sin embargo, se reitera que todo el personal que este programado para realizar labores criticas como lo es el trabajo en alturas, debe contar con el certificado de idoneidad vigente. Además de esto, se solicita la entrega de permisos diligenciados para trabajo en alturas, análisis de trabajo seguro de cada actividad y certificaciones e inspecciones de equipos y elementos utilizados para dichas actividades (andamios, arnés, eslingas, conectores, líneas de vida, frenos y demás que se usen en campo)

Por otra parte, se requiere realizar las actividades de obra teniendo en cuenta *"el procedimiento de ejecución"* establecido en el anexo técnico para cada ítem, los cuales incorporan las medidas de SEGURIDAD Y SALUD EN EL TRABAJO para el desarrollo del contrato.

Conjuntamente, se solicita la entrega de los soportes necesarios para dar cumplimiento a la siguiente obligación contractual, la cual se encuentra establecida en la CLÁUSULA OCTAVA – OBLIGACIONES DEL CONTRATISTA del "CONTRATO CELEBRADO ENTRE EL INSTITUTO COLOMBIANO AGROPECUARIO – ICA Y GESTIÓN RURAL Y URBANA S.A.S." donde se dispone en su numeral 13. Lo siguiente: *"Destinar a la ejecución del contrato, en un porcentaje mínimo del 5%, sin perjuicio de que el contratista incorpore un porcentaje superior al definido por la Entidad, la provisión de bienes o servicios por parte de alguno o algunos de los siguientes sujetos de especial protección constitucional: población en pobreza extrema, desplazados por la violencia, personas en proceso de reintegración o reincorporación, víctimas de conflicto armado interno, mujeres cabeza de hogar, adultos mayores, personas en condición de discapacidad, así como la población de las comunidades indígena, negra, afrocolombiana, raizal, palanquera, Rrom o gitana, entre otros sujetos identificados por la Ley o la jurisprudencia de esta manera. (…). El cumplimiento de esta obligación deberá probarse ante al supervisor y/o interventor dentro de los tres (3) días hábiles siguientes contados a partir de la firma del acta de inicio. (…)*
El porcentaje de sujetos mencionados incorporados a la ejecución del contrato deberá mantenerse durante toda su vigencia en el porcentaje mínimo establecido en este numeral, so pena del incumplimiento contractual"

Para la acreditación de dicha obligación se debe aplicar lo dispuesto en el artículo 2.2.1.2.4.2.17 del Decreto 1082 de 2015.

Así lo expuesto, se solicita la atención a los puntos anteriormente mencionados.

Cordialmente,

JUAN CARLOS JAIMES ACERO

ASUNTO: SOLICITUD DE ENTREGA DE INFORMACION

Cordial saludo,

Por medio de la presente, me permito solicitar en cumplimiento de nuestras obligaciones nos permitimos los pendientes que deben ser cerradas de manera inmediata, citando su anexo técnico y demás obligaciones que ha día de hoy ya deberían estar entregadas y aprobadas, para dar por cumplidas las mismas:

- *El cuadro de cuadrillas se realizará según tipo (albañilería, carpintería en madera, pinturas, etc.), señalando su conformación (oficiales, ayudantes, etc.). Se indicará el valor del salario, éste y sus componentes deben ajustarse a lo establecido por la ley, el resultado deberá expresarse en jornal (la remuneración de un día de trabajo) y será trasladado a la casilla de mano de obra en los APU. Las cuadrillas tipo a utilizar deben estar de acuerdo con la actividad a desarrollar para cada actividad. Solo se aceptará una cuadrilla por especialidad en cada APU, es decir no pueden existir 2 o más cuadrillas iguales en un mismo APU, pero si es posible que un APU necesite el empleo de varias cuadrillas de distinto género.*

- *Este documento fue entregado por el contratista de obra y avalado por la interventoría. Sin embargo, se evidencia una falencia en el inicio, dado que la fecha del cronograma esta a partir del 01 de noviembre, y el acta de inicio del contrato es del 02 de noviembre, se solicita ajustar.*

- *Destinar a la ejecución del contrato, en un porcentaje mínimo del 5%, sin perjuicio de que el contratista incorpore un porcentaje superior al definido por la Entidad, la provisión de bienes o servicios por parte de alguno o algunos de los siguientes sujetos de especial protección constitucional: población en pobreza extrema, desplazados por la violencia, personas en proceso de reintegración o reincorporación, víctimas de conflicto armado interno, mujeres cabeza de hogar, adultos mayores, personas en condición de discapacidad, así como la población de las comunidades indígena, negra, afrocolombiana, raizal, palanquera, Rrom o gitana, entre otros sujetos identificados por la Ley o la jurisprudencia de esta manera. El porcentaje de sujetos mencionados incorporados a la ejecución del contrato deberá mantenerse durante toda*

- *Presentar al interventor informes quincenales del avance de obra, mensuales e informe final de obra en medio magnético. La información mínima que debe contener cada informe se encuentra especificado en el ANEXO No. 01 – ANEXO TÉCNICO*

- *Efectuar la socialización con las partes interesadas del entorno del contrato (numeral 5.4 del anexo técnico).*

- *Documentos de salud ocupacional: Carta de compromiso de cumplimiento como contratista y matriz de cumplimiento de requisitos en seguridad y salud en el trabajo (numeral 6.9 del anexo técnico).*

- *La entidad no ha recibido el plan detallado de trabajo exigido en el Plan detallado de trabajo (numeral 4.1 del Anexo Técnico)*

Además, es obligación de presentar cada comité el siguiente producto:

El Contratista se compromete a realizar una presentación en formato digital semanal ante los comités pertinentes, detallando el progreso de la obra en los aspectos financieros, administrativos, de seguridad y salud ocupacional (SST), así como en los temas ambientales. Esta presentación deberá incluir información fotográfica actualizada y detallada sobre el estado de avance en cada una de estas áreas, proporcionando a los comités una visión integral del desarrollo del proyecto

Finalmente, se le recuerda al ejecutor que dentro de sus obligaciones debe cumplir con "*Una vez perfeccionado el contrato se emitirá el acta de inicio del contrato fecha en la que se iniciará el tiempo de desarrollo del mismo y según lo establecido en los pliegos de condiciones, el Contratista de obra tendrá hasta CINCO (5) DÍAS HÁBILES contados a partir de la firma del contrato y anterior al acta de inicio para presentar documentación del equipo de trabajo, informe diagnóstico, análisis de precios unitarios, cronograma detallado, plan de manejo ambiental, y seguridad y salud en el trabo e informe de cubierta detallado.",* por lo anterior, se reitera que se debe finalizar con las entregas que tiene pendientes de manera inmediata, más aun teniendo en cuenta que el cumplimiento de sus obligaciones puede verse afectado, derivando en tramites alternos.

Quedamos atentos a la entrega de lo anteriormente solicitado.

ASUNTO: Respuesta a oficio **20242126793**

Cordial saludo, mediante la presente me permito dar respuesta y alcance al comunicado relacionado en el asunto, recibido por parte de la entidad para recibir atención puntual de las siguientes observaciones:

OBLIGACIÓN	RESPUESTA DE LA INTERVENTORIA
Presentar al interventor del contrato dentro en un término máximo de cinco (5) días hábiles, contados a partir de la suscripción del contrato y previo a la suscripción del acta de inicio, el Análisis de Precios Unitarios (APU), en el cual se deberá discriminar como mínimo la cantidad y costo de materiales con su respectivo desperdicio, herramientas, equipos, mano de obra y transporte de materiales en general, requeridos para el desarrollo de cada una de las actividades que conforman el cuadro de presupuesto, los cuales deben cumplir con lo siguiente: i). Materiales y desperdicio: Los necesarios (especificar); ii). Herramientas y equipo: Los necesarios (especificar); iii). Mano de Obra: Cuadrilla o cuadrillas requeridas.	Como señala la supervisión se dio un plazo adicional al ejecutor para entregar el cuadro de cuadrillas, sin embargo, a fecha de elaboración del presente comunicado no se ha recibido el producto señalado pese a las solicitudes de la interventoría. Compromiso no cumplido.
Presentar cronograma detallado de obra a realizar por capítulos, a partir de los planos, documentos técnicos, las condiciones del sitio, utilizando una aplicación software tipo Project o similar en un diagrama de barra, discriminando en semanas, con el plazo máximo de ejecución establecido por la entidad y dentro de los	A fecha de elaboración del presente comunicado no se ha recibido el producto

parámetros propuestos; deberá incluir: la secuencia y duración de cada una de las actividades, indicadas en el formato de cantidades de la propuesta económica, ruta crítica, programación de los trabajos que incluya todas las actividades (capítulos, subcapítulos y los ítems en su totalidad) y programa detallado de personal por actividades. El cronograma de obra se entregará al interventor dentro en un término máximo de cinco (5) días hábiles, contados a partir de la suscripción del contrato previa suscripción del acta de inicio, para que posteriormente sea entregado y aprobado por parte de la interventoría.	señalado pese a las solicitudes de la interventoría. Compromiso no cumplido.
Destinar a la ejecución del contrato, en un porcentaje mínimo del 5%, sin perjuicio de que el contratista incorpore un porcentaje superior al definido por la Entidad, la provisión de bienes o servicios por parte de alguno o algunos de los siguientes sujetos de especial protección constitucional: población en pobreza extrema, desplazados por la violencia, personas en proceso de reintegración o reincorporación, víctimas de conflicto armado interno, mujeres cabeza de hogar, adultos mayores, personas en condición de discapacidad, así como la población de las comunidades indígena, negra, afrocolombiana, raizal, palanquera, Rrom o gitana, entre otros sujetos identificados por la Ley o la jurisprudencia de esta manera. El porcentaje de sujetos mencionados incorporados a la ejecución del contrato deberá mantenerse durante toda su vigencia en el porcentaje mínimo establecido en este numeral, so pena del incumplimiento contractual. El Supervisor hará el seguimiento y verificará que las personas vinculadas al inicio y durante la ejecución del contrato pertenezcan a los grupos poblacionales enunciados anteriormente. Para estos efectos, el contratista presentará la documentación respectiva que acredite la condición de los sujetos mencionados y la forma en la que participarán durante la ejecución del contrato. El cumplimiento de esta obligación deberá probarse ante al supervisor y/o interventor dentro de los tres (3) días hábiles siguientes contados a partir de la firma del acta de inicio. Para la acreditación de la condición de mujer cabeza de familia, personas en condición de discapacidad, adultos mayores, población de las comunidades indígena, negra, afrocolombiana, raizal, palanquera, Rrom o gitana, personas en proceso de reintegración o reincorporación, se aplicará en lo pertinente lo dispuesto en el artículo 2.2.1.2.4.2.17 del Decreto 1082 de 2015 o la norma que lo modifique, complemente o sustituya. Por su parte, la condición de población en pobreza extrema se constatará en las bases de datos del Sistema de Identificación de Potenciales Beneficiarios de Programas Sociales (Sisbén IV) y la condición de víctima de conflicto armado y de desplazados por	A fecha de elaboración del presente comunicado no se ha recibido el producto señalado pese a las solicitudes de la interventoría y según. Compromiso no cumplido.

la violencia deberá demostrarse con el certificado de inclusión en el Registro Único de Víctimas – RUV, en los términos del Decreto 1084 de 2015 o la norma que lo modifique, complemente o sustituya. La condición de los sujetos de especial protección constitucional que no se encuentre definida en esta cláusula deberá ser acreditada por el contratista de conformidad con lo determinado por la ley y la jurisprudencia en ausencia de norma aplicable.	
Presentar informe de cubierta donde se muestre el levantamiento actual de la estructura y se identifique si es necesario o no realizar un reforzamiento estructural. Este informe se deberá entregar al interventor dentro en un término máximo de cinco (5) días hábiles contados a partir de la suscripción del acta de inicio. El informe deberá cumplir con los requisitos exigidos en el ANEXO No. 01 – ANEXO TÉCNICO.	El contratista a la fecha de elaboración del presente comunicado no tiene pendientes para este tema y dicho informe se encuentra en revisión de interventoría.
Presentar al interventor del contrato el listado del personal que laborará en el proyecto, la cual deberá contener: Nombre, cedula de ciudadanía, cargo; también debe aportar las certificaciones de afiliación y de pago mes a mes de la seguridad social y durante el periodo del contrato (Pensión, EPS y ARL). Toda persona que labore dentro del proyecto debe estar vinculada a la empresa	El contratista a la fecha de elaboración del presente comunicado no tiene pendientes para este tema y atendió los requerimientos de la interventoría, el mismo día que se le remitió la solicitud.
Entregar al interventor las memorias de cálculo, los planos de diseño y los planos récord de obra el cual deberá ser adjunto al informe final y necesarios para la suscripción del acta de recibo	El contratista a la fecha de elaboración del presente comunicado no tiene pendientes para este tema y atendió los requerimientos la información se encuentra en revisión de la interventoría.
Efectuar la socialización con las partes interesadas del entorno del contrato (numeral 5.4 del anexo técnico).	A fecha de elaboración del presente comunicado no se ha recibido ningún soporte de la realización de la actividad, pese a la solicitud de la interventoría.
Documentos de salud ocupacional: Carta de compromiso de cumplimiento como contratista y matriz de cumplimiento de requisitos en seguridad y salud en el trabajo (numeral 6.9 del anexo técnico).	A fecha de elaboración del presente comunicado no se ha recibido la Carta de compromiso de cumplimiento como contratista, sin embargo, la matriz de cumplimiento de requisitos en seguridad y salud en el trabajo ya se encuentra avalada y fue remitida a la entidad, además el contratista ha venido entregando los insumos que esta relaciona.

OBLIGACIÓN	RESPUESTA DE LA INTERVENTORIA
Proveer suficiente personal, herramienta, equipo y trabajar con los turnos necesarios para que el trabajo se realice de acuerdo con el programa de obra aprobado, cuando el contratista se atrase con respecto al programa de obra, el interventor le puede exigir por escrito un plan de contingencia en el que aumente el número de turnos y/o la jornada de trabajo, sin costo adicional para el ICA.	A fecha de elaboración del presente comunicado, la interventoría solicitud de remisión de plan de contingencia, pues si bien es cierto en los frentes hay personal de la obra, no tiene la autorización de ejecución de actividades en cubierta y cerramiento que representan la ruta crítica de los frentes, por lo tanto, debe redirigir sus ejecuciones.
Llevar una memoria diaria o bitácora de obra de todos los acontecimientos, sucesos y decisiones tomadas en la ejecución de la obra, registrarse la visita de funcionarios que tengan que ver con el proyecto, y demás acontecimientos, debe permitir la comprensión general de la obra y desarrollo de las actividades de acuerdo con el cronograma de ejecución aprobado. Debe firmarse por el residente de obra y la interventoría del contrato. Esta bitácora deberá ser entregada previa suscripción del acta de recibo.	A fecha de elaboración del presente comunicado, la interventoría remitió corte para la semana y continuará con el envió con cada semana y acumulado en el informe mensual.
Realizar y mantener actualizado el balance de obra, el cual debe contener las actividades, cantidades y valores de las condiciones de obra contratadas, condiciones actualizadas, mayores y menores cantidades de obra y cantidades finales ejecutadas; documento que tiene por objeto el control de los recursos contractuales. Éste deberá ser presentado a la interventoría con cada corte de obra o cuando esta lo requiera	Con la comisión a realizar en la semana 25 al 29 de noviembre de 2024, se espera el cierre de cualquier pendiente técnico y se podría realizar el ejercicio desde el comité del 03 de diciembre de 2024.

Respecto a las observaciones puntuales relacionadas para el **CONTRATO GGC-184-2024,** nos permitimos comunicar:

OBLIGACIÓN	RESPUESTA DE LA INTERVENTORIA
Conocer las obligaciones a cargo del Contratista de obra, del Interventor y de la Entidad Contratante; los riesgos que asume cada parte dentro del contrato y verificar que se cumplan los objetivos generales y específicos de los mismos.	A fecha de elaboración del presente comunicado, la interventoría solicitud de remisión de plan de contingencia, pues si bien es cierto en los frentes hay personal de la obra, no tiene la autorización de ejecución de actividades en cubierta y cerramiento que representan la ruta crítica de los frentes, por lo tanto, debe redirigir sus ejecuciones.
Conocer a cabalidad todos los documentos referentes al proceso del contratista de obra, los estudios previos, el anexo 1 - anexo técnico, el pliego de condiciones, la propuesta, y demás documentos que hacen parte del proceso de selección, para realizar el seguimiento, vigilancia y control de forma eficiente.	

Exigir al contratista la documentación requerida una vez se adjudique el contrato para su respectiva revisión y aprobación: documentación del equipo de trabajo, informe diagnóstico, análisis de precios unitarios, cronograma de trabajo, Plan de Manejo Ambiental, y seguridad y salud en el trabajo, cuadro de cuadrillas, informe de cubierta detallado, y plan detallado de trabajo.	A fecha de elaboración del presente comunicado, la interventoría remitió corte para la semana y continuará con el envió con cada semana y acumulado en el informe mensual.
Realizar la aprobación y velar por el cumplimiento del Plan de Manejo Ambiental de Obra y el Sistema de Gestión, Seguridad y Salud en el Trabajo (SG SST), elaborado por el contratista de obra	Con la comisión a realizar en la semana 25 al 29 de noviembre de 2024, se espera el cierre de cualquier pendiente técnico y se podría realizar el ejercicio desde el comité del 03 de diciembre de 2024.
Ante la evidencia de un posible incumplimiento, el interventor, informará de inmediato o a más tardar al día hábil siguiente de la ocurrencia, a través de informe técnico detallado, al ordenador del gasto, para que inicie las acciones correspondientes, contando para ello con el apoyo de quien cumple con el rol jurídico de la empresa y de la dependencia de la entidad	La interventoría se permite informar, que en cada una de las solicitudes que emite la entidad siempre ha estado en conocimiento pues es copiado en cada uno de los comunicados. Además, si bien es cierto que el contratista tiene pendiente la remisión y atención para cierre, a fecha de elaboración del presente comunicado y en garantía de un buen proceso, el ejecutor ya fue informado del posible incumplimiento en el que incurriría de no cerrar sus pendientes, junto con la proyección de la posible tasación de su multa de aplicar.
Efectuar la verificación del aporte mínimo dentro del rango de cinco por ciento (5 %) al diez por ciento (10%) que el Contratista incorpore en la provisión de bienes o servicios por parte de alguno o algunos de los siguientes sujetos de especial protección constitucional: población en pobreza extrema, desplazados por la violencia, personas en proceso de reintegración o reincorporación, víctimas de conflicto armado interno, mujeres cabeza de hogar, adultos mayores, personas en condición de discapacidad, así como la población de las comunidades indígena, negra, afrocolombiana, raizal, palanquera, Rrom o gitana, entre otros sujetos identificados por la Ley o la jurisprudencia de esta manera.	La interventoría ha venido requiriendo al contratista para la entrega de los soportes que aplican según jurisprudencia, sin embargo, a pesar de informar en el último comité que esta preparando dicha entrega, a fecha de elaboración del presente comunicado no se ha recibido.

Analizar el avance contractual de los trabajos, con el fin de prever, con la suficiente anticipación, eventuales incumplimientos de plazos y sub-plazos, que hagan necesaria la toma de medidas con el contratista para prevenirlos, o para efectos de advertir y sugerir al Instituto Colombiano Agropecuario - ICA la imposición de las sanciones contractuales correspondientes.	La interventoría solicitó un plan de contingencia para mitigar los atrasos que se vienen presentando en el frente
Requerir a los contratistas cuando incumplan obligaciones contractuales, informar de ello por escrito al Instituto Colombiano Agropecuario - ICA y, de resultar pertinente, avisar a la aseguradora.	En los anexos 1 y 2 del presente oficio se evidencian los requerimientos y seguimiento realizados al contratista de obra por parte de la interventoría, así mismo, dentro del anexo 1 se evidencia el requerimiento por presunto incumplimiento de las obligaciones contractuales (oficio INT-ICA-2024-031).

Anexo 1. Relación de correspondencia – Requerimientos
Anexo 2. Informes semanales de interventoría

ASUNTO: Solicitud remisión Informe Quincenal.

Cordial saludo, por medio de la presente, me permito solicitar la remisión del informe técnico quincenal de obra, con el fin de verificar el avance de las actividades durante la primera semana de labores y dar cumplimiento al numeral 23 de las obligaciones específicas del contratista de obra (posteriormente se deberá remitir un informe cada quince días).

Este informe deberá contener la siguiente información:
• Encabezado de la semana: Fecha, número de informe, Periodo.
• Datos contractuales: Contratista, No. Contrato, Objeto, Valor inicial, Valor actualizado, Fecha de Inicio, Fecha de Vencimiento, Prorrogas (detallas todas las prórrogas del contrato), Suspensiones, Interventor.
• Control de Programación: porcentaje de obra programado, porcentaje de obra ejecutado, porcentaje acumulado de obra tanto del programado como el ejecutado.
• Control presupuesto: valor de obra programado, valor de obra ejecutado, valor de obra acumulado tanto del programado como del ejecutado.
• Actividades realizadas en la semana.
• Resumen Ejecutivo del contrato.
• Personal y equipo en obra.
• Registro fotográfico del antes y el después.
• Gestión de los tramites contractuales.

Se solicita la entrega del primer informe quincenal con corte al día martes 12 de noviembre de 2024.

ASUNTO: SOLICITUD DE ENTREGA DE INFORMACION TECNICA

Cordial saludo,

Por medio de la presente, me permito solicitar la entrega levantamiento de la cubierta existente, con el fin de conocer la estructura actual y lograr determinar, junto con un informe y el conceto de si se requiere o no un reforzamiento para la instalación de la teja nueva. Además de lo anterior puntualmente nos permitimos citar de su anexo técnico que se debe cumplir con:

• El contratista deberá realizar un levantamiento de la cubierta existente, con el fin de conocer la estructura actual y lograr determinar, si se requiere o no un reforzamiento para la instalación de la teja nueva. Todo esto se deberá presentar en un informe.

• El contratista a partir del levantamiento de la estructura de la cubierta y el predimensionamiento estructural entregado por la entidad, deberá realizar los ajustes, actualizaciones y/o rediseño necesario para darle cumplimiento a las condiciones actuales del sitio y a la normativa vigente. El insumo producto de esta obligación debe estar aprobado por la interventoría.

Además de lo anterior, para la correcta atención del componente técnico estructural se debe atender desde la especialidad eléctrica lo siguiente:

• En caso de que se requiera alguna modificación en el diseño eléctrico de las redes presentado por la entidad, el contratista con su personal mínimo de trabajo deberá realizar las modificaciones, ajustes o rediseños necesarios para darle cumplimiento a las condiciones del sitio y la normativa vigente. El insumo producto de esta obligación debe estar aprobado por la interventoría.

• Cuando se vaya a realizar trabajos de obra en áreas donde existan líneas eléctricas, se debe informar con el fin de buscar el acompañamiento.

Finalmente, se le recuerda al ejecutor que dentro de sus obligaciones debe cumplir con "*Una vez perfeccionado el contrato se emitirá el acta de inicio del contrato fecha en la que se iniciará el tiempo de*

desarrollo del mismo y según lo establecido en los pliegos de condiciones, el Contratista de obra tendrá hasta CINCO (5) DÍAS HÁBILES contados a partir de la firma del contrato y anterior al acta de inicio para presentar documentación del equipo de trabajo, informe diagnóstico, análisis de precios unitarios, cronograma detallado, plan de manejo ambiental, y seguridad y salud en el trabo e informe de cubierta detallado.", por lo anterior, sírvase finalizar con las entregas que tiene pendientes de manera inmediata, más aun teniendo en cuenta que sus ejecuciones en dependen de la aprobación de varios de estos entregables.

Quedamos atentos a la entrega de lo anteriormente solicitado.

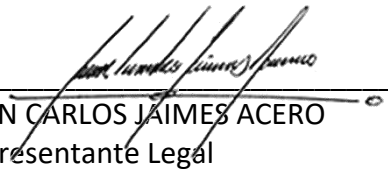
ASUNTO: Solicitud cumplimiento de obligaciones contractuales.

Cordial saludo, por medio de la presente, me permito solicitar el cumplimiento de las obligaciones por parte del consorcio contratista de obra, específicamente los numerales 23, 25 y 26 de las obligaciones específicas del contratista, según se indica en el contrato de obra N° GGC-089-2024.

conjuntamente con la interventoría, actas de inicio, parciales y de recibo y liquidación final de obra. **23.** Presentar al interventor informes quincenales del avance de obra, mensuales e informe final de obra en medio magnético. La información mínima que debe contener cada informe se encuentra especificado en el **ANEXO No. 01 – ANEXO TÉCNICO.**

suscripción del acta de recibo. **25.** Asistir a los comités semanales, con el interventor y supervisor del contrato, que permita a las partes verificar el avance del contrato, el cumplimiento de las obligaciones a cargo del contratista o cualquier aspecto técnico, administrativo, financiero, contable y jurídico referente al mismo. Es obligación y responsabilidad del contratista la asistencia a estos comités de seguimiento con los profesionales aprobados de acuerdo con los temas a tratar, en el lugar y hora donde el contratante disponga. **26.** El Contratista se compromete a realizar una presentación en formato

en el lugar y hora donde el contratante disponga. **26.** El Contratista se compromete a realizar una presentación en formato digital semanal ante los comités pertinentes, detallando el progreso de la obra en los aspectos financieros, administrativos, de seguridad y salud ocupacional (SST), así como en los temas ambientales. Esta presentación deberá incluir información fotográfica actualizada y detallada sobre el estado de avance en cada una de estas áreas, proporcionando a los comités una visión integral del desarrollo del proyecto. **27.** Mantener reserva sobre la información que legalmente lo amerite y que



Lo anterior se solicita teniendo en cuenta lo evidenciado en el comité técnico de obra del día de hoy 19 de noviembre de 2024 en donde se requería la participación del profesional especialista estructural de obra, ya que el principal tema a tratar era la entrega y exposición del concepto estructural en ambas sedes.

Por otra parte, nos encontramos en la tercera semana de labores y hasta el momento no se han realizado las presentaciones en digital en los comités técnicos, en donde el contratista de obra exponga el progreso detallado de la obra a nivel técnico, financiero, administrativo, SST y ambiental, con el respectivo registro fotográfico actualizado.

Por último, se reitera la solicitud de remisión del informe técnico quincenal, según lo requerido por nosotros mediante el oficio INT-ICA-2024-018 allegado a ustedes el día 08 de noviembre del año en curso.

En aras de dar cumplimiento a las obligaciones contractuales y evitar sanciones, solicito sean atendidas de manera oportuna las disposiciones descritas previamente.

Cordialmente,

ASUNTO: REQUERIMIENTOS CONTRACTUALES DEL AREA SST Y AMBIENTAL

Cordial saludo,

Teniendo en cuenta las obligaciones contractuales establecidas y los requerimientos necesarios para garantizar el cumplimiento de la normatividad legal vigente en materia de Seguridad y Salud en el trabajo y Medio ambiente, la interventoría solicita:

- PLAN DE MANEJO AMBIENTAL

Este documento debe contener las medidas y actividades necesarias para prevenir, mitigar, corregir o compensar los impactos y efectos ambientales generados por el desarrollo de las actividades del contrato en mención.

Así mismo, se sugiere considerar las actividades a implementar para el manejo de residuos de construcción y/o demolición, así como aquellos residuos que requieren un manejo y disposición especial. Además de esto, se deberá incluir el programa de manejo de materiales obtenidos, el cual debe cumplir con lo mencionado en el "CONTRATO CELEBRADO ENTRE EL INSTITUTO COLOMBIANO AGROPECUARIO – ICA Y GESTIÓN RURAL Y URBANA S.A.S." CLÁUSULA OCTAVA – OBLIGACIONES DEL CONTRATISTA, literal B ESPECIFICAS, NUMERAL 9 "Responder por la obtención de todo lo relacionado con las fuentes de materiales de construcción necesarias para la ejecución de la obra contratada y la obtención legal y oportuna de todos los materiales y suministros que se requieran para la construcción de la obra (…)"

Es importante mencionar, que dichos programas deberán ser aplicados durante la ejecución de la obra y estarán sujetos a verificación y control por parte de la interventoría.

- SEGURIDAD Y SALUD EN EL TRABAJO

Por otra parte, considerando lo establecido en el ANEXO 1. ANEXO TÉCNICO: ESPECIFICACIONES TÉCNICAS, se requiere especial atención a los siguientes requerimientos:

a. Los empleados del contratista están obligados a utilizar indumentaria uniforme en las condiciones aprobadas por la interventoría.
b. El contratista deberá presentar al interventor el registro del nuevo personal a ingresar para los respectivos estudios de seguridad y posterior aprobación, para esto, es necesario entregar una relación de personal actualizado que cuente con su documentación de ingreso completa y vigente
c. El contratista, deberá mantener actualizada y a la vista el listado de personal, con su respectiva EPS, ARL y seguros colectivos de existir, con teléfono de contacto y de emergencia.

Así mismo, en dicho documento se menciona la siguiente solicitud que, a la fecha la interventoría no ha podido verificar:

"Una vez firmada el acta de inicio del contrato de obra, se deberá diligenciar y entregar a la interventoría y supervisión del contrato, los siguientes documentos, los cuales serán remitidos a la Oficina de Salud Ocupacional.

1. *Carta de compromiso de cumplimiento como contratistas"*

Por esto, se requiere la entrega inmediata de dicho documento.

Para el siguiente punto mencionado en la documentación contractual:

"2. Matriz de cumplimiento de requisitos en seguridad y salud en el trabajo para contratistas jurídicos, en el cual deberá presentar la siguiente información:

Trabajo en alturas:
Programa de Protección Contra caídas
Procedimiento para la atención y rescate en alturas
Certificado de formación o competencia laboral de las personas que realizaran trabajo en alturas.
Certificado del trabajador de trabajo en alturas
Certificado de calidad y registros de inspecciones de los equipos de protección contra caídas y de los sistemas de acceso a utilizar"

Se evidencia la entrega de la MATRIZ DE IDENTIFICACIÓN DE PELIGROS, EVALUACIÓN Y VALORACIÓN DE RIESGOS, la cual evalúa los riesgos asociados a las actividades a ejecutar para el presente proyecto, así mismo, cumple con la entrega del programa de protección contra caídas, con los PROCEDIMIENTOS OPERATIVOS NORMALIZADOS (PON) el cual incluye el procedimiento de atención y rescate en alturas.

Cabe mencionar que, durante el desarrollo de actividades, se evidenció la entrega de certificados de trabajador autorizado para alturas, sin embargo, se reitera que todo el personal que este programado para realizar labores criticas como lo es el trabajo en alturas, debe contar con el certificado de idoneidad vigente. Además de esto, se solicita la entrega de permisos diligenciados para trabajo en alturas, análisis de trabajo seguro de cada actividad y certificaciones e inspecciones de equipos y elementos utilizados para dichas actividades (andamios, arnés, eslingas, conectores, líneas de vida, frenos y demás que se usen en campo)

Por otra parte, se requiere realizar las actividades de obra teniendo en cuenta *"el procedimiento de ejecución"* establecido en el anexo técnico para cada ítem, los cuales incorporan las medidas de SEGURIDAD Y SALUD EN EL TRABAJO para el desarrollo del contrato.

Conjuntamente, se solicita la entrega de los soportes necesarios para dar cumplimiento a la siguiente obligación contractual, la cual se encuentra establecida en la CLÁUSULA OCTAVA – OBLIGACIONES DEL CONTRATISTA del "CONTRATO CELEBRADO ENTRE EL INSTITUTO COLOMBIANO AGROPECUARIO – ICA Y GESTIÓN RURAL Y URBANA S.A.S." donde se dispone en su numeral 13. Lo siguiente: *"Destinar a la ejecución del contrato, en un porcentaje mínimo del 5%, sin perjuicio de que el contratista incorpore un porcentaje superior al definido por la Entidad, la provisión de bienes o servicios por parte de alguno o algunos de los siguientes sujetos de especial protección constitucional: población en pobreza extrema, desplazados por la violencia, personas en proceso de reintegración o reincorporación, víctimas de conflicto armado interno, mujeres cabeza de hogar, adultos mayores, personas en condición de discapacidad, así como la población de las comunidades indígena, negra, afrocolombiana, raizal, palanquera, Rrom o gitana, entre otros sujetos identificados por la Ley o la jurisprudencia de esta manera. (…). El cumplimiento de esta obligación deberá probarse ante al supervisor y/o interventor dentro de los tres (3) días hábiles siguientes contados a partir de la firma del acta de inicio. (…)*
El porcentaje de sujetos mencionados incorporados a la ejecución del contrato deberá mantenerse durante toda su vigencia en el porcentaje mínimo establecido en este numeral, so pena del incumplimiento contractual"

Para la acreditación de dicha obligación se debe aplicar lo dispuesto en el artículo 2.2.1.2.4.2.17 del Decreto 1082 de 2015.

Así lo expuesto, se solicita la atención a los puntos anteriormente mencionados.

Cordialmente,

ASUNTO: SOLICITUD DE ENTREGA DE INFORMACION

Cordial saludo,

Por medio de la presente, me permito solicitar en cumplimiento de nuestras obligaciones nos permitimos los pendientes que deben ser cerradas de manera inmediata, citando su anexo técnico y demás obligaciones que ha día de hoy ya deberían estar entregadas y aprobadas, para dar por cumplidas las mismas:

- *El cuadro de cuadrillas se realizará según tipo (albañilería, carpintería en madera, pinturas, etc.), señalando su conformación (oficiales, ayudantes, etc.). Se indicará el valor del salario, éste y sus componentes deben ajustarse a lo establecido por la ley, el resultado deberá expresarse en jornal (la remuneración de un día de trabajo) y será trasladado a la casilla de mano de obra en los APU. Las cuadrillas tipo a utilizar deben estar de acuerdo con la actividad a desarrollar para cada actividad. Solo se aceptará una cuadrilla por especialidad en cada APU, es decir no pueden existir 2 o más cuadrillas iguales en un mismo APU, pero si es posible que un APU necesite el empleo de varias cuadrillas de distinto género.*

- *Este documento fue entregado por el contratista de obra y avalado por la interventoría. Sin embargo, se evidencia una falencia en el inicio, dado que la fecha del cronograma esta a partir del 01 de noviembre, y el acta de inicio del contrato es del 02 de noviembre, se solicita ajustar.*

- *Destinar a la ejecución del contrato, en un porcentaje mínimo del 5%, sin perjuicio de que el contratista incorpore un porcentaje superior al definido por la Entidad, la provisión de bienes o servicios por parte de alguno o algunos de los siguientes sujetos de especial protección constitucional: población en pobreza extrema, desplazados por la violencia, personas en proceso de reintegración o reincorporación, víctimas de conflicto armado interno, mujeres cabeza de hogar, adultos mayores, personas en condición de discapacidad, así como la población de las comunidades indígena, negra, afrocolombiana, raizal, palanquera, Rrom o gitana, entre otros sujetos identificados por la Ley o la jurisprudencia de esta manera. El porcentaje de sujetos mencionados incorporados a la ejecución del contrato deberá mantenerse durante toda*

- *Presentar al interventor informes quincenales del avance de obra, mensuales e informe final de obra en medio magnético. La información mínima que debe contener cada informe se encuentra especificado en el ANEXO No. 01 – ANEXO TÉCNICO*

- *Efectuar la socialización con las partes interesadas del entorno del contrato (numeral 5.4 del anexo técnico).*

- *Documentos de salud ocupacional: Carta de compromiso de cumplimiento como contratista y matriz de cumplimiento de requisitos en seguridad y salud en el trabajo (numeral 6.9 del anexo técnico).*

- *La entidad no ha recibido el plan detallado de trabajo exigido en el Plan detallado de trabajo (numeral 4.1 del Anexo Técnico)*

Además, es obligación de presentar cada comité el siguiente producto:

El Contratista se compromete a realizar una presentación en formato digital semanal ante los comités pertinentes, detallando el progreso de la obra en los aspectos financieros, administrativos, de seguridad y salud ocupacional (SST), así como en los temas ambientales. Esta presentación deberá incluir información fotográfica actualizada y detallada sobre el estado de avance en cada una de estas áreas, proporcionando a los comités una visión integral del desarrollo del proyecto

Finalmente, se le recuerda al ejecutor que dentro de sus obligaciones debe cumplir con "*Una vez perfeccionado el contrato se emitirá el acta de inicio del contrato fecha en la que se iniciará el tiempo de desarrollo del mismo y según lo establecido en los pliegos de condiciones, el Contratista de obra tendrá hasta CINCO (5) DÍAS HÁBILES contados a partir de la firma del contrato y anterior al acta de inicio para presentar documentación del equipo de trabajo, informe diagnóstico, análisis de precios unitarios, cronograma detallado, plan de manejo ambiental, y seguridad y salud en el trabo e informe de cubierta detallado.",* por lo anterior, se reitera que se debe finalizar con las entregas que tiene pendientes de manera inmediata, más aun teniendo en cuenta que el cumplimiento de sus obligaciones puede verse afectado, derivando en tramites alternos.

Quedamos atentos a la entrega de lo anteriormente solicitado.

ASUNTO: Requerimiento de la interventoría del CONTRATO N° GGC-089- 2024 por presunto incumplimiento para el contrato de la referencia

Respetado Ingeniero,

Dentro de la ejecución del contrato de Obra N° GGC-089- 2024 suscrito entre la **EL INSTITUTO COLOMBIANO AGROPECUARIO – ICA y GESTIÓN RURAL Y URBANA S.A.S.,** que tiene como objeto **"ADECUACIÓN DE LA OFICINA LOCAL ICA MAGANGUÉ Y MANTENIMIENTO DE LA OFICINA LOCAL ICA EN CARMEN DE BOLIVAR, DEPARTAMENTO DE BOLÍVAR",** por medio de la presente nos permitimos solicitarle el inicio de las acciones que aplican, de acuerdo con la información que se relacionan a continuación:

1. INFORMACIÓN GENERAL DEL CONTRATO

CONTRATO:	GGC-089-2024
OBJETO:	**"ADECUACIÓN DE LA OFICINA LOCAL ICA MAGANGUÉ Y MANTENIMIENTO DE LA OFICINA LOCAL ICA EN CARMEN DE BOLIVAR, DEPARTAMENTO DE BOLÍVAR"**
CONTRATISTA:	**GESTIÓN RURAL Y URBANA S.A.S.**
REPRESENTANTE LEGAL:	**GILDARDO CASTILLO SANCHEZ**
FECHA DE INICIO:	02 DE NOVIEMBRE DE 2024
FECHA DE TERMINACIÓN:	CUATRO (4) MESES O HASTA EL 31 DE DICIEMBRE DE 2024
VALOR:	MIL CIENTO CUARENTA Y DOS MILLONES QUINIENTOS DOCE MIL SETECIENTOS NUEVE PESOS M/CTE ($1.142.512.709,00)
ALCANCE Y ACTIVIDADES ESPECIFICAS	El Contratista deberá desarrollar el objeto del Contrato de conformidad con las especificaciones y características técnicas señaladas en los Documentos del proceso de LICITACIÓN PÚBLICA No. GC- LP-064-2024, los cuales hacen parte integral del presente contrato. El Contratista se obliga para con la Entidad a ejecutar, a los

	precios cotizados en la propuesta y con sus propios medios: materiales, maquinaria, laboratorios, equipos y personal, en forma independiente y con plena autonomía técnica y administrativa, hasta su total terminación y aceptación final, las cantidades de obra que se detallan en su propuesta económica, conforme lo señaló en el FORMULARIO No. 01 – FORMULARIO DE PROPUESTA ECONÓMICA.

2. HECHOS O RAZONES QUE FUNDAMENTAN EL REQUERIMIENTO

La interventoría en cumplimiento de sus obligaciones y de acuerdo con las exigencias del Contrato de obra N° GGC-089- 2024, se permite informar acerca del posible incumplimiento de sus obligaciones correspondientes al contrato en mención, toda vez que se tienen pendientes que deben ser cerrados de manera inmediata. Por lo anterior, citamos su anexo técnico y demás obligaciones que a hoy ya deberían estar entregadas y aprobadas, para dar por cumplidas las mismas, pero a la fecha continúan pendientes:

- No se ha remitido el cuadro de cuadrillas que debe cumplir con *"realizará según tipo (albañilería, carpintería en madera, pinturas, etc.), señalando su conformación (oficiales, ayudantes, etc.). Se indicará el valor del salario, éste y sus componentes deben ajustarse a lo establecido por la ley, el resultado deberá expresarse en jornal (la remuneración de un día de trabajo) y será trasladado a la casilla de mano de obra en los APU. Las cuadrillas tipo a utilizar deben estar de acuerdo con la actividad a desarrollar para cada actividad. Solo se aceptará una cuadrilla por especialidad en cada APU, es decir no pueden existir 2 o más cuadrillas iguales en un mismo APU, pero si es posible que un APU necesite el empleo de varias cuadrillas de distinto género."*

- La programación fue entregada por el contratista de obra y avalado por la interventoría. Sin embargo, se evidencia que el inicio del cronograma está a partir del 01 de noviembre, y el acta de inicio del contrato es del 02 de noviembre, se solicita ajustar.

- No se han remitido los documentos que permitan verificar que se destinó *para la ejecución del contrato, en un porcentaje mínimo del 5%, sin perjuicio de que el contratista incorpore un porcentaje superior al definido por la Entidad, la provisión de bienes o servicios por parte de alguno o algunos de los siguientes sujetos de especial protección constitucional: población en pobreza extrema, desplazados por la violencia, personas en proceso de reintegración o reincorporación, víctimas de conflicto armado interno, mujeres cabeza de hogar, adultos mayores, personas en condición de discapacidad, así como la población de las comunidades indígena, negra, afrocolombiana, raizal, palanquera, Rrom o gitana, entre otros sujetos identificados por la Ley o la jurisprudencia de esta manera. El porcentaje de sujetos mencionados incorporados a la ejecución del contrato deberá mantenerse durante toda*

- No se han remitido al interventor informes quincenales del avance de obra, mensuales e informe final de obra en medio magnético. La información mínima que debe contener cada informe se encuentra especificado en el ANEXO No. 01 – ANEXO TÉCNICO

- No se han remitido los documentos que permitan verificar que se realizó *la socialización con las partes interesadas del entorno del contrato (numeral 5.4 del anexo técnico).*

- No se han remitido los documentos *de salud ocupacional: Carta de compromiso de cumplimiento como contratista y matriz de cumplimiento de requisitos en seguridad y salud en el trabajo (numeral 6.9 del anexo técnico).*

- No se ha *recibido el plan detallado de trabajo exigido en el Plan detallado de trabajo (numeral 4.1 del Anexo Técnico)*

- Además, es obligación de presentar cada comité el siguiente producto *"realizar una presentación en formato digital semanal ante los comités pertinentes, detallando el progreso de la obra en los aspectos financieros, administrativos, de seguridad y salud ocupacional (SST), así como en los temas ambientales. Esta presentación deberá incluir información fotográfica actualizada y detallada sobre el estado de avance en cada una de estas áreas, proporcionando a los comités una visión integral del desarrollo del proyecto"* y a la fecha en los dos comités técnicos semanales, no se ha realizado.

3. DOCUMENTOS Y SOPORTES

A continuación, se relacionan las evidencias que sustentan el posible incumplimiento en el que ha incurrido el contratista en orden cronológico. Se adjunta dicha evidencia en el Anexo 1:

4. POSIBLE TASACIÓN DE APREMIO FASE

De acuerdo con su ***CLAUSULA DECIMA CUARTA. - MULTAS:*** *El ICA tendrá la facultad de imponer multas en caso de incumplimiento de las obligaciones a cargo del CONTRATISTA de conformidad con lo dispuesto por el Artículo 17° de la Ley 1150 de 2007, el Artículo 86° de la Ley 1474 de 2011 (Estatuto Anticorrupción) y el Artículo 2.2.1.2.3.1.19 del Decreto 1082 de 2015, Ley 1882 de 2018,* por lo tanto, de no remitir de manera inmediata lo solicitado en el debido estado para ser recibido a satisfacción, fundamentado en:

CAUSALES:

3. Si el Contratista no entrega la información completa que le solicite el interventor, que se relacione con el objeto del contrato, dentro de los plazos y en los términos de cada requerimiento, se causará una multa equivalente al 0,2% del valor del contrato. Estas multas se causarán sucesivamente por cada día de atraso, hasta cuando el Contratista demuestre que corrija el incumplimiento respectivo a satisfacción del interventor.

7. Por incumplir el ofrecimiento otorgado en cuanto al factor calidad, al Contratista se le impondrá una multa equivalente al 0,5% del valor del contrato, por cada día calendario de atraso en el cumplimiento de dicha obligación.

Causal	Porcentaje	$ 1.142.512.709,00	Dias de atraso	Valor total
3. Si el Contratista no entrega la información completa que le solicite el interventor *(…)*	0,2%	$ 2.285.025,42	4,00	$ 9.140.101,67
Comentarios Presentar al interventor informes quincenales del avance de obra, mensuales e informe final de obra en medio magnético. La información mínima que debe contener cada informe se encuentra especificado en el ANEXO No. 01 – ANEXO TÉCNICO				
7. Por incumplir el ofrecimiento otorgado *(…)*	0,5%	$ 5.712.563,55	12,00	$ 68.550.762,54
Comentarios Documentos de salud ocupacional: Carta de compromiso de cumplimiento como contratista y matriz de cumplimiento de requisitos en seguridad y salud en el trabajo (numeral 6.9 del anexo técnico).				
			TOTAL	**$ 77.690.864,21**

Si bien la tasación está señalada en el cuadro anterior, esta no puede superar la suma de $ 57.125.635,45

5. CONCEPTO DE INTERVENTORÍA POSIBLE APREMIO

Teniendo en cuenta lo señalado líneas atrás, se le indica al ejecutor que dentro de sus obligaciones debe cumplir con "*Una vez perfeccionado el contrato se emitirá el acta de inicio del contrato fecha en la que se iniciará el tiempo de desarrollo del mismo y según lo establecido en los pliegos de condiciones, el Contratista de obra tendrá hasta CINCO (5) DÍAS HÁBILES contados a partir de la firma del contrato y anterior al acta de inicio para presentar documentación del equipo de trabajo, informe diagnóstico, análisis de precios unitarios, cronograma detallado, plan de manejo ambiental, y seguridad y salud en el trabo e informe de cubierta detallado.",* además que a la fecha no tiene acumulado varios de los compromiso de comité sin entender dentro de los plazos dados para el cierre. Por lo anterior, se reitera que se debe finalizar con las entregas que tiene pendientes de manera inmediata, más aún, teniendo en cuenta que el cumplimiento de sus obligaciones puede verse afectado, por POSIBLE **TASACIÓN DE APREMIO FASE1,** del numeral anterior.

Quedamos atentos a la entrega de lo anteriormente solicitado.

INFORME SEMANAL DE INTERVENTORÍA

5. ACTIVIDADES POR LA INTERVENTORIA REALIZADAS EN LA SEMANA

La interventoría ha llevado el control técnico, administrativo, jurídico y financiero a la obra que tiene por objeto, ADECUACIÓN DE LA OFICINA LOCAL ICA MAGANGUÉ Y MANTENIMIENTO DE LA OFICINA LOCAL ICA EN MAGANGUE, DEPARTAMENTO DE BOLÍVAR.

Realizo control permanente del personal de la obra que tenga su respectiva seguridad social e implementos de seguridad , se desarrollo la inspeccion de localizacion y replanteo ejecutado por el personal del contratistas, se exigio la entrega de planos del levnatamiento a la interventoria.

Durante este periodo se lleve a cabo un acompañamiento permante en cada actividad desarrollada, evaluando que el personal denegado para cada trabajo cumpliera acabalidad con todo los requicitos exigidos por la interventotia y hojas de vida aprobadas por esta.

La interventoria diligencio formato de bitácora de obra en donde se hace gistro diario de lluvias, de personal laborando en la obra, la cual se realiza diariamente consignando actividades realizadas, solicitudes por parte del contratista y soluciones dadas por la interventoria.

En conjunto con la residente de obra se verifican las cantidades del presupuesto inicial con las encontradas en sitio.

Se solicitó al contratista información sobre la instalacón de la valla informativa, el cuál manifestó que ya está proxima a llegar a obra.

Se informa al contratista que el diseño estructural de la cimentación de cerramiento no está aprobada por la interventoría, por tal motivo la actividad que desarrollan en sitio de figurado de hierro es bajo su propia responsabilidad en caso tal no cumpla con las especificaciones del estudio. El día 21 de noviembre el contratista suspende la actividad de armado de hierro.

ASUNTO: Respuesta oficio GRU-GGC-089-2024-16-24 (Planta eléctrica).

Respetado Ingeniero,

En alcance a su comunicado y en cumplimiento de nuestras obligaciones, nos permitimos informar que la ficha técnica ABC Power Solutions, la consideramos la más viable para el cumplimiento de las especificaciones técnicas que se le requieren. Si bien es cierto, que los equipos según sus fichas técnicas son muy similares; la experiencia con los equipos ABC Power Solutions ha sido satisfactoria. Sin embargo, es importante saber el tiempo de entrega que brindan los proveedores, teniendo en cuenta la época del año y el plazo de su contrato.

Finalmente, en relación con la obra civil para la planta, no hay una normatividad que exija unas dimensiones; sin embargo, por buenas prácticas, siempre se recomienda dejar por lo menos 1 m perimetral para realizar mantenimiento; es decir, si la planta tiene 1.5 x 3 m, requiere un área total de 3.5 x 5 m, además se requiere un cárcamo para manejo de posibles líquidos, trampa de grasas, cubierta, junto los elementos eléctricos para garantizar el correcto funcionamiento y suministro del equipo.

Quedamos atentos a los comentarios.

ASUNTO: Ampliación y actualización comunicado **INT-ICA-2024-033**

Cordial saludo,

Mediante la presente me permito remitir actualización del comunicado del asunto, que atiende las observaciones recibidas en el comunicado **20242126793**, que es el siguiente a fecha de elaboración del comunicado:

OBLIGACIÓN	RESPUESTA DE LA INTERVENTORIA
Presentar al interventor del contrato dentro en un término máximo de cinco (5) días hábiles, contados a partir de la suscripción del contrato y previo a la suscripción del acta de inicio, el Análisis de Precios Unitarios (APU), en el cual se deberá discriminar como mínimo la cantidad y costo de materiales con su respectivo desperdicio, herramientas, equipos, mano de obra y transporte de materiales en general, requeridos para el desarrollo de cada una de las actividades que conforman el cuadro de presupuesto, los cuales deben cumplir con lo siguiente: i). Materiales y desperdicio: Los necesarios (especificar); ii). Herramientas y equipo: Los necesarios (especificar); iii). Mano de Obra: Cuadrilla o cuadrillas requeridas.	Se entrega en anexo #1 cuadro de cuadrillas
Presentar cronograma detallado de obra a realizar por capítulos, a partir de los planos, documentos técnicos, las condiciones del sitio, utilizando una aplicación software tipo Project o similar en un diagrama de barra, discriminando en semanas, con el plazo máximo de ejecución establecido por la entidad y dentro de los parámetros propuestos; deberá incluir: la secuencia y duración de cada una de las actividades,	Se entrega en anexo #2 programación actualizada y firmada

indicadas en el formato de cantidades de la propuesta económica, ruta crítica, programación de los trabajos que incluya todas las actividades (capítulos, subcapítulos y los ítems en su totalidad) y programa detallado de personal por actividades. El cronograma de obra se entregará al interventor dentro en un término máximo de cinco (5) días hábiles, contados a partir de la suscripción del contrato previa suscripción del acta de inicio, para que posteriormente sea entregado y aprobado por parte de la interventoría.	
Destinar a la ejecución del contrato, en un porcentaje mínimo del 5%, sin perjuicio de que el contratista incorpore un porcentaje superior al definido por la Entidad, la provisión de bienes o servicios por parte de alguno o algunos de los siguientes sujetos de especial protección constitucional: población en pobreza extrema, desplazados por la violencia, personas en proceso de reintegración o reincorporación, víctimas de conflicto armado interno, mujeres cabeza de hogar, adultos mayores, personas en condición de discapacidad, así como la población de las comunidades indígena, negra, afrocolombiana, raizal, palanquera, Rrom o gitana, entre otros sujetos identificados por la Ley o la jurisprudencia de esta manera. El porcentaje de sujetos mencionados incorporados a la ejecución del contrato deberá mantenerse durante toda su vigencia en el porcentaje mínimo establecido en este numeral, so pena del incumplimiento contractual. El Supervisor hará el seguimiento y verificará que las personas vinculadas al inicio y durante la ejecución del contrato pertenezcan a los grupos poblacionales enunciados anteriormente. Para estos efectos, el contratista presentará la documentación respectiva que acredite la condición de los sujetos mencionados y la forma en la que participarán durante la ejecución del contrato. El cumplimiento de esta obligación deberá probarse ante al supervisor y/o interventor dentro de los tres (3) días hábiles siguientes contados a partir de la firma del acta de inicio. Para la acreditación de la condición de mujer cabeza de familia, personas en condición de discapacidad, adultos mayores, población de las comunidades indígena, negra, afrocolombiana, raizal, palanquera, Rrom o gitana, personas en proceso de reintegración o reincorporación, se aplicará en lo pertinente lo dispuesto en el artículo 2.2.1.2.4.2.17 del Decreto 1082 de 2015 o la norma que lo modifique, complemente o sustituya. Por su parte, la condición de población en pobreza extrema se constatará en las bases de datos del Sistema de Identificación de Potenciales Beneficiarios de Programas	Se entrega en anexo #3 documentos que validan la atención de la obligación.

Sociales (Sisbén IV) y la condición de víctima de conflicto armado y de desplazados por la violencia deberá demostrarse con el certificado de inclusión en el Registro Único de Víctimas – RUV, en los términos del Decreto 1084 de 2015 o la norma que lo modifique, complemente o sustituya. La condición de los sujetos de especial protección constitucional que no se encuentre definida en esta cláusula deberá ser acreditada por el contratista de conformidad con lo determinado por la ley y la jurisprudencia en ausencia de norma aplicable.	
Presentar informe de cubierta donde se muestre el levantamiento actual de la estructura y se identifique si es necesario o no realizar un reforzamiento estructural. Este informe se deberá entregar al interventor dentro en un término máximo de cinco (5) días hábiles contados a partir de la suscripción del acta de inicio. El informe deberá cumplir con los requisitos exigidos en el ANEXO No. 01 – ANEXO TÉCNICO.	El contratista a la fecha de elaboración del presente comunicado ha remitido dos informes, sin embargo, ninguna de las presentaciones ha podido ser aprobada y en campo se estableció plazo final para el 06/12/24, bajo compromiso de inicio de otras actividades, especialmente en el frente de Magangué. En el numeral 18. Se expone se debe contar con todos los recursos para cumplir con el programa de obra aprobado, y cuando el contratista se atrase, el interventor le puede exigir por escrito un plan de contingencia en el que tome todas las acciones para nivelar sus diferencias, sin costo adicional para el ICA.
Presentar al interventor del contrato el listado del personal que laborará en el proyecto, la cual deberá contener: Nombre, cedula de ciudadanía, cargo; también debe aportar las certificaciones de afiliación y de pago mes a mes de la seguridad social y durante el periodo del contrato (Pensión, EPS y ARL). Toda persona que labore dentro del proyecto debe estar vinculada a la empresa	N/A
Entregar al interventor las memorias de cálculo, los planos de diseño y los planos récord de obra el cual deberá ser adjunto al informe final y necesarios para la suscripción del acta de recibo.	El contratista a la fecha de elaboración del presente comunicado ha remitido un informe, sin embargo, la presentación no fue aprobada.
Efectuar la socialización con las partes interesadas del entorno del contrato (numeral 5.4 del anexo técnico).	A fecha de elaboración del presente comunicado, ya se realizó la socialización de Magangué (Ver anexo #4).
Documentos de salud ocupacional: Carta de compromiso de cumplimiento como contratista y matriz de cumplimiento de requisitos en seguridad y salud en el trabajo (numeral 6.9 del anexo técnico).	Se entrega en anexo #5 Carta de compromiso de cumplimiento como contratista.

OBLIGACIÓN	RESPUESTA DE LA INTERVENTORIA
Proveer suficiente personal, herramienta, equipo y trabajar con los turnos necesarios para que el trabajo se realice de acuerdo con el programa de obra aprobado, cuando el contratista se atrase con respecto al programa de obra, el interventor le puede exigir por escrito un plan de contingencia en el que aumente el número de turnos y/o la jornada de trabajo, sin costo adicional para el ICA.	A fecha de elaboración del presente comunicado, la interventoría solicitud de remisión de plan de contingencia, pues si bien es cierto en los frentes hay personal de la obra, no tiene la autorización de ejecución de actividades en cubierta y cerramiento que representan la ruta crítica de los frentes, por lo tanto, debe redirigir sus ejecuciones.
Llevar una memoria diaria o bitácora de obra de todos los acontecimientos, sucesos y decisiones tomadas en la ejecución de la obra, registrarse la visita de funcionarios que tengan que ver con el proyecto, y demás acontecimientos, debe permitir la comprensión general de la obra y desarrollo de las actividades de acuerdo con el cronograma de ejecución aprobado. Debe firmarse por el residente de obra y la interventoría del contrato. Esta bitácora deberá ser entregada previa suscripción del acta de recibo.	N/A
Realizar y mantener actualizado el balance de obra, el cual debe contener las actividades, cantidades y valores de las condiciones de obra contratadas, condiciones actualizadas, mayores y menores cantidades de obra y cantidades finales ejecutadas; documento que tiene por objeto el control de los recursos contractuales. Éste deberá ser presentado a la interventoría con cada corte de obra o cuando esta lo requiera	Con la comisión a realizar en la semana 25 al 29 de noviembre de 2024, se espera el cierre de cualquier pendiente técnico y se podría realizar el ejercicio desde el comité del 03 de diciembre de 2024.

CONTRATO GGC-184-2024

OBLIGACIÓN	RESPUESTA DE LA INTERVENTORIA
Conocer las obligaciones a cargo del Contratista de obra, del Interventor y de la Entidad Contratante; los riesgos que asume cada parte dentro del contrato y verificar que se cumplan los objetivos generales y específicos de los mismos	A fecha de elaboración del presente comunicado, la interventoría solicitud de remisión de plan de contingencia, pues si bien es cierto en los frentes hay personal de la obra, no tiene la autorización de ejecución de actividades en cubierta y cerramiento que representan la ruta crítica de los frentes, por lo tanto, debe redirigir sus ejecuciones.
Conocer a cabalidad todos los documentos referentes al proceso del contratista de obra, los estudios previos, el anexo	

1 - anexo técnico, el pliego de condiciones, la propuesta, y demás documentos que hacen parte del proceso de selección, para realizar el seguimiento, vigilancia y control de forma eficiente	
Exigir al contratista la documentación requerida una vez se adjudique el contrato para su respectiva revisión y aprobación: documentación del equipo de trabajo, informe diagnóstico, análisis de precios unitarios, cronograma de trabajo, Plan de Manejo Ambiental, y seguridad y salud en el trabajo, cuadro de cuadrillas, informe de cubierta detallado, y plan detallado de trabajo	N/A
Realizar la aprobación y velar por el cumplimiento del Plan de Manejo Ambiental de Obra y el Sistema de Gestión, Seguridad y Salud en el Trabajo (SG SST), elaborado por el contratista de obra	Se entrega en anexo #6 el documento definitivo.
Ante la evidencia de un posible incumplimiento, el interventor, informará de inmediato o a más tardar al día hábil siguiente de la ocurrencia, a través de informe técnico detallado, al ordenador del gasto, para que inicie las acciones correspondientes, contando para ello con el apoyo de quien cumple con el rol jurídico de la empresa y de la dependencia de la entidad	La interventoría remitió el oficio INT-ICA-2024-031 al ejecutor, que fue copiado a la entidad, además solicitó plan de contingencia ante la devolución del informe del estado actual y atención de las cubiertas, junto con el atraso en el frente Magangué que si bien a la fecha no es significativo viene presentando una tendencia al alza.
Efectuar la verificación del aporte mínimo dentro del rango de cinco por ciento (5 %) al diez por ciento (10%) que el Contratista incorpore en la provisión de bienes o servicios por parte de alguno o algunos de los siguientes sujetos de especial protección constitucional: población en pobreza extrema, desplazados por la violencia, personas en proceso de reintegración o reincorporación, víctimas de conflicto armado interno, mujeres cabeza de hogar, adultos mayores, personas en condición de discapacidad, así como la población de las comunidades indígena, negra, afrocolombiana, raizal, palanquera, Rrom o gitana, entre otros sujetos identificados por la Ley o la jurisprudencia de esta manera	La interventoría ya había enviado los soportes de las solicitudes, sin embargo, en el presente informe se presentan los documentos del ejecutor.

Analizar el avance contractual de los trabajos, con el fin de prever, con la suficiente anticipación, eventuales incumplimientos de plazos y sub-plazos, que hagan necesaria la toma de medidas con el contratista para prevenirlos, o para efectos de advertir y sugerir al Instituto Colombiano Agropecuario - ICA la imposición de las sanciones contractuales correspondientes.	La interventoría solicitó un plan de contingencia para mitigar los atrasos que se vienen presentando. Se realizó comisión donde se aclararon temas pendientes. En el frente del Carmen los porcentajes de avance cumplen con lo programado, sin embargo, el frente de Magangué los avances son menores pese a tener actividades por realizar. Se solicitó plan de contingencia para mitigar los atrasos.
Requerir a los contratistas cuando incumplan obligaciones contractuales, informar de ello por escrito al Instituto Colombiano Agropecuario - ICA y, de resultar pertinente, avisar a la aseguradora.	Se envió el requerimiento por presunto incumplimiento de las obligaciones contractuales (oficio INT-ICA-2024-031) al ejecutor

Cordialmente,

JUAN CARLOS JAIMES ACERO
Representante Legal

1. INTRODUCCIÓN

El instituto Colombiano Agropecuario (ICA), celebró con la empresa GESTIÓN RURAL Y URBANA SAS, en adelante GRUSAS, el Contrato GGC-089-2024, cuyo objeto es: "ADECUACIÓN DE LA OFICINA LOCAL ICA MAGANGUÉ Y MANTENIMIENTO DE LA OFICINA LOCAL ICA EN CARMEN DE BOLIVAR, DEPARTAMENTO DE BOLÍVAR", el cual se ejecuta en el municipio del Carmen de bolivar como una de las dos frentes de trabajo, se dio inicio a la ejecución de la misma el 01 de noviembre del presente año y tiene como fecha de entrega final el 31 de diciembre de este mismo.

Dentro de las actividades previstas contempladas se encuentra el arreglo parcial de la cubierta de la edificación ya que la estructura actual de esta y la configuración de esta armadura puede sujetar la nueva cubierta, el tecnicismo de este concepto está bajo supervisión del ingeniero estructural.

Con el objetivo de dar cumplimiento a las condiciones contractuales suscritas, GRUSAS presenta el Plan de Trabajo, dando cumplimiento a las obligaciones contractuales requeridas en los documentos del proceso y en la minuta del contrato (Estudios previos, pliego de condiciones, anexo técnico, etc.) en donde se registra el estado actual de las instalaciones y las necesidades ya evidenciadas por el ICA, en consecuencia, se determinan las actividades a ejecutar en el desarrollo del contrato.

3. DESCRIPCIÓN DEL PROYECTO

LOCALIZACIÓN:

El proyecto se encuentra ubicado en el Carmen de bolivar, al inicio la ruta del sol sector 3, del departamento de Bolívar

EL CARMEN DE BOLIVAR

Ilustración 2 Localización del proyecto en el Carmen de Bolívar (imagen tomada de Google Earth)

Las instalaciones del ICA en el Carmen de Bolívar comparten recinto con la corporación AGROSAVIA, esta determinante debe tenerse en cuenta ya que esta activa en personal, actividad laboral y comparten algunos espacios.

4. ACTIVIDADES A DESARROLLAR

El Carmen de bolivar

Tabla 3 Presupuesto y cantidades frente de obra Magangué

ITEM	DESCRIPCION	UND.	CANT
1,00	PRELIMINARES		
1.1	INSTALACIÓN DE CERRAMIENTO PROVISIONAL EN TELA VERDE POLIETILENO DE ALTA DENSIDAD Y RESISTENCIA 65 GR/M2 CON UNA ALTURA DE 2,10 M, ESTACONES DE MADERA COMÚN PARA FIJACIÓN VERTICAL DE ALTURA DE 2,50 M PUESTO MÍNIMO CADA 2,0 M, ELEMENTOS DE FIJACIÓN, INCLUYE: SUMINISTRO, TRANSPORTE, INSTALACIÓN, EXCAVACIÓN, CONCRETO DE FUNDACIÓN PREPARADO EN OBRA DE 17 MPA - 2500 PSI, DIÁMETRO APROXIMADO 0,20 M Y PROFUNDIDAD APROXIMADA 0,30 M, CABLE O ALAMBRE TENSOR PARTE INFERIOR Y SUPERIOR HORIZONTAL, MANTENIMIENTO, DESMONTE Y TODOS LOS DEMÁS ELEMENTOS NECESARIOS PARA SU CORRECTA INSTALACIÓN Y OPERACIÓN.	M	42,00
1.2	LOCALIZACIÓN, TRAZADO Y REPLANTEO. SE UTILIZARÁ PERSONAL EXPERTO CON EQUIPO DE PRECISIÓN. TODOS LOS DEMÁS MATERIALES, ELEMENTOS, EQUIPOS, SEGUROS DE EQUIPOS, INSTALACIONES, COMBUSTIBLES, LUBRICANTES, ENERGÍA, TRANSPORTE, MANO DE OBRA, NECESARIOS PARA UNA CORRECTA EJECUCIÓN DE LOS TRABAJOS. SE HARÁN LOS CHEQUEOS O REVISIONES NECESARIOS, CON LA FRECUENCIA QUE INDIQUE LA INTERVENTORÍA. INCLUYE ELABORACIÓN DE PLANOS.	DÍA	1,00
2,00	RETIROS Y DEMOLICIONES		
2.1	DESMONTE DE TEJA DE ASBESTO CEMENTO EXISTENTE. LA MANO DE OBRA INCLUYE LOS ELEMENTOS REQUERIDOS DE PROTECCIÓN PARA EL MANEJO DE ESTA TEJA. INCLUYE MANEJO ESPECIAL, CARGUE, TRANSPORTE Y BOTADA ESPECIAL AL SITIO PERMITIDO DE MANEJO DE ESTOS ELEMENTOS.	M2	376,00
2.2	DESMONTE DE ESTRUCTURA DE CUBIERTA EXISTENTE. INCLUYE MANO DE OBRA DE DESINSTALACIÓN, CARGUE, TRANSPORTE Y BOTADA CON DERECHO A BOTADERO	M2	376,00
2.3	DESMONTE DE CIELO RASO EN MADERA. INCLUYE CARGUE, TRANSPORTE Y BOTADA Y/O TRANSPORTE AL SITIO DE DISPOSICIÓN FINAL	M2	376,00
2.4	RETIRO DE INSTALACIONES ELÉCTRICAS Y LUMINARIAS EXISTENTES. INCLUYE CARGUE, TRANSPORTE Y BOTADA Y/O TRANSPORTE AL SITIO DE DISPOSICIÓN FINAL	GL	1,00
2.5	RETIRO DE CIELO RASO EN SUPERBOARD. INCLUYE CARGUE, TRANSPORTE Y BOTADA EN LOS SITIOS OFICIALES, ADEMÁS DEL DERECHO AL BOTADERO	M2	64,00
2.6	DESMONTE DE ESCRITORIOS Y SILLAS.INCLUYE MOVERLOS O TRASLADARLOS A SITIO DE ACOPIO DEBIDAMENTE ENVUELTOS EN PLÁSTICO	UND	10,00
2.7	DESMONTE Y REINSTALACIÓN DE ARCHIVADORES, CONSISTE EN LA REUBICACIÓN DE LOS ARCHIVADORES EN EL ÁREA DOCUMENTAL, ESTO CON EL FIN DE REDISTRIBUIR EL ESPCIO ACORDE CON EL ACUERDO 049 DE 2000 REPOSITORÍO NORMATIVO ARCHIVO GERENERAL DE LA NACIÓN.INCLUYE RESANE DE PISOS.	M2	50,01
2.8	DEMOLICIÓN MAMPOSTERÍA CON UN ESPESOR HASTA 25CM. INCLUYE CARGUE, TRANSPORTE Y BOTADA DE ESCOMBROS EN BOTADEROS OFICIALES, DEMOLICIÓN DE REVOQUES Y DE ENCHAPES APLICADOS EN EL MURO A DEMOLER E INSTALACIONES EMBEBIDAS, ADEMÁS RECUPERACIÓN DE LOS MATERIALES APROVECHABLES O SU TRANSPORTE HASTA EL SITIO QUE LO INDIQUE LA INTERVENTORÍA; SE DEBE UTILIZAR CORTADORA PARA GARANTIZAR QUE LOS FILETES DE LA DEMOLICIÓN QUEDEN ORTOGONALES	M2	15,00
3,00	CUBIERTA		

3.1	SUMINISTRO, TRANSPORTE E INSTALACIÓN DE CUBIERTA (TEJA TERMOACÚSTICA KINGROOF ECO - PANEL TIPO SANDWICH CON AISLANTE EN POLISOCIANURATO PIR SAFE E:30MM BLANCO O VERDE, CALIBRE 28, LÁMINA INTERNA FOIL VINIL COLOR NATURAL O SIMILAR CON LAS MISMAS CARACTERISTICAS O MEJORES). INCLUYE LOS CABALLETES Y REMATES REQUERIDOS, ADEMÁS DE LOS ACCESORIOS PARA SU DEBIDA INSTALACIÓN, Y RECUBRIMIENTO DE COLOR.	M2	37A147:F152
3.2	CONSTRUCCIÓN Y MONTAJE DE ESTRUCTURA METÁLICA CON PERFILERIA TIPO PERFILERIA TIPO IPE, HEA, PHR-C, PTE PARA ELEMENTOS DE CUBIERTA, FACHADA, RAMPAS O ÁREAS DE CIRCULACIÓN METÁLICAS, SEGÚN PLANO. INCLUYE: SUMINISTRO Y TRANSPORTE DE LÁMINAS, PLATINAS, UNIONES, SOLDADURAS DE ACABADO O PRESENTACIÓN, ANCLAJES Y PERNOS A ESTRUCTURA DE CONCRETO Y MADERA. INCLUYE ENSAYOS A SOLDADURAS, OBRA FALSA Y TODO EL EQUIPO Y LA HERRAMIENTA NECESARIA PARA EL MONTAJE.	KG	6008,68
3.3	SUMINISTRO, TRANSPORTE E INSTALACION DE CANAL PVC TIPO AMAZONAS O SIMILAR PARA AGUAS LLUVIAS CON MEDIDAS APROXIMADAS DE ANCHO 162,3MM POR ALTURAS DE 142,3MM (PARTE ALTA) Y 94,9MM (PARTE BAJA) CON LAS RESPECTIVAS UNIONES, TAPAS EXTERIORES Y UNIONES A LAS BAJANTES. INCLUYE ELEMENTOS PARA FIJACIÓN A CUBIERTA Y TODOS LOS DEMÁS REQUERIDOS PARA SU CORRECTA INSTALACIÓN Y FUNCIONAMIENTO	M	50,00
3.4	SUMINISTRO, TRANSPORTE E INSTALACIÓN BAJANTE PVC TIPO RAINMAX DE DIMENSIONES APROXIMADAS DE 100MMX100MM CON LAS RESPECTIVAS UNIONES, CODOS Y SOPORTES PARA SU FIJACIÓN. INCLUYE TODOS LOS DEMÁS ACCESORIOS Y ELEMENTOS PARA SU DEBIDA INSTALACIÓN.	M	44,20
3.5	SUMINISTRO, TRANSPORTE Y COLOCACIÓN DE CIELO RASO CONTINUO EN PVC BLANCO RESISTENTE A LA HUMEDAD, INCLUYE ESTRUCTURA METÁLICA DE ACERO GALVANIZADO, TORNILLOS Y ANCLAJES NECESARIOS PARA SU CORRECTO FUNCIONAMIENTO, LA TOTALIDAD DE LOS ACCESORIOS NECESARIOS PARA SU CORRECTA INSTALACIÓN, Y LAS PERFORACIONES Y RESANE	M2	30,00
3.6	SUMINISTRO, TRANSPORTE Y COLOCACIÓN DE CIELO RASO CONTINUO EN PLACA DE YESO RH 1/2" RESISTENTE A LA HUMEDAD, INCLUYE ESTRUCTURA METÁLICA DE ACERO GALVANIZADO, TORNILLOS Y ANCLAJES NECESARIOS PARA SU CORRECTO FUNCIONAMIENTO, LA TOTALIDAD DE LOS ACCESORIOS NECESARIOS PARA SU CORRECTA INSTALACIÓN, Y LAS PERFORACIONES Y RESANE	M2	376,00
4,00	INSTALACIONES ELÉCTRICAS		
4.1	SUMINISTRO, TRANSPORTE E INSTALACIÓN DE UPS TRIFÁSICO DE 10 KVA 208/120V ON LINE, AUTONOMÍA DE 10 MIN A PLANA CARGA. INCLUYE TODOS LAS HERRAMIENTAS, EQUIPOS, INSUMOS Y MANO DE OBRA PARA SU CORRECTA INSTALACIÓN.	UND	1,00
4.2	SUMINISTRO, TRANSPORTE E INSTALACIÓN DE LUMINARIA DE EMERGENCIA CERTIFICADA RETIE PARA CUARTOS TÉCNICOS. INCLUYE 1 METRO DE CABLE ENCAUCHETADO 3X18 HF FR LS Y CLAVIJA. INCLUYE TODOS LAS HERRAMIENTAS, EQUIPOS, INSUMOS Y MANO DE OBRA PARA SU CORRECTA INSTALACIÓN.	UND	8,00
4.3	SUMINISTRO, TRANSPORTE E INSTALACIÓN SALIDA DE ILUMINACIÓN EN TUBERÍA EMT 3/4", CON CAJA RAWELT 5800, TOMA CORRIENTE, INCLUYE CURVAS, Y ACCESORIOS PARA FIJACIÓN. INCLUYE TODOS LAS HERRAMIENTAS, EQUIPOS, INSUMOS Y MANO DE OBRA PARA SU CORRECTA INSTALACIÓN.	UND	88,00
4.4	SUMINISTRO, TRANSPORTE E INSTALACIÓN SALIDA DE TOMACORRIENTE DOBLE CON POLO A TIERRA EN MURO SOBREPUESTA EN TUBERÍA EMT 3/4", CON CAJA RAWELT 5800, TOMA CORRIENTE, INCLUYE CURVAS, Y ACCESORIOS PARA FIJACIÓN. INCLUYE TODOS LAS HERRAMIENTAS, EQUIPOS, INSUMOS Y MANO DE OBRA PARA SU CORRECTA INSTALACIÓN.	UND	2,00
4.5	SUMINISTRO, TRANSPORTE E INSTALACIÓN SALIDA DE TOMACORRIENTE DOBLE BLANCA CON POLO A TIERRA EN CANALETA METÁLICA SOBREPUESTA , TOMA CORRIENTE CABLE 12 AWG TRIPLE FASE AZUL Y ACCESORIOS PARA FIJACIÓN Y FUNCIONAMIENTO. INCLUYE TODOS LAS HERRAMIENTAS, EQUIPOS, INSUMOS Y MANO DE OBRA PARA SU CORRECTA INSTALACIÓN.	UND	41,00
4.6	SUMINISTRO, TRANSPORTE E INSTALACIÓN DE TABLERO TRIFÁSICO DE 18 CIRCUITOS PARA RED REGULADA SIN ESPACIO TOTALIZADOR, INCLUYE PROTECCIONES 12 DE 1X20A.. INCLUYE TODOS LAS HERRAMIENTAS, EQUIPOS, INSUMOS Y MANO DE OBRA PARA SU CORRECTA INSTALACIÓN.	UND	1,00
4.7	SUMINISTRO, TRANSPORTE E INSTALACIÓN SALIDA DE TOMACORRIENTE DOBLE CON POLO A TIERRA REGULADA EN CANALETA METÁLICA SOBREPUESTA , TOMA CORRIENTE Y ACCESORIOS PARA FIJACIÓN Y FUNCIONAMIENTO. INCLUYE TODOS LAS HERRAMIENTAS, EQUIPOS, INSUMOS Y MANO DE OBRA PARA SU CORRECTA INSTALACIÓN.	UND	41,00

4.8	SUMINISTRO, TRANSPORTE E INSTALACIÓN SALIDA DE INTERRUPTOR SENCILLO EN TUBERÍA EMT 3/4", CON CAJA RAWELT 2400, INTERRUPTOR, INCLUYE CURVAS, Y ACCESORIOS PARA FIJACIÓN. INCLUYE TODOS LAS HERRAMIENTAS, EQUIPOS, INSUMOS Y MANO DE OBRA PARA SU CORRECTA INSTALACIÓN Y FUNCIONAMIENTO.	UND	15,00
4.9	SUMINISTRO, TRANSPORTE E INSTALACIÓN DE TRANSFORMADOR DE 30 KVA REGULADOR 208/120V . INCLUYE TODOS LAS HERRAMIENTAS, EQUIPOS, INSUMOS Y MANO DE OBRA PARA SU CORRECTA INSTALACIÓN Y FUNCIONAMIENTO.	UND	1,00
4.10	SUMINISTRO, TRANSPORTE E INSTALACIÓN DE LUMINARIA LED 60X60 40W 120V . INCLUYE TODOS LAS HERRAMIENTAS, EQUIPOS, INSUMOS Y MANO DE OBRA PARA SU CORRECTA INSTALACIÓN Y FUNCIONAMIENTO.	UND	44,00
4.11	SUMINISTRO E INSTALACIÓN DE LUMINARIA PANEL LED REDONDO DE 18W 120V. PARA COCINA, BAÑOS CUARTO DE ASEO, PASILLOS. INCLUYE TODOS LAS HERRAMIENTAS, EQUIPOS, INSUMOS Y MANO DE OBRA PARA SU CORRECTA INSTALACIÓN Y FUNCIONAMIENTO.	UND	36,00
4.12	SUMINISTRO, TRANSPORTE E INSTALACIÓN DE ACOMETIDA TRIFÁSICA A TN1 DESDE TGD 3X1/0+1/0+1/0T, ELEMENTOS DE SUJECIÓN. INCLUYE TODOS LAS HERRAMIENTAS, EQUIPOS, INSUMOS Y MANO DE OBRA PARA SU CORRECTA INSTALACIÓN Y FUNCIONAMIENTO.	M	30,00
4.13	SUMINISTRO, TRANSPORTE E INSTALACIÓN DE CABLE TRENSADO 3X2 FASE ROJA O FASE AZUL PARA TOMACORRIENTES DESDE EL TABLERO HASTA LA PRIMERA TOMA DEL CIRCUITO. INCLUYE TODOS LAS HERRAMIENTAS, EQUIPOS, INSUMOS Y MANO DE OBRA PARA SU CORRECTA INSTALACIÓN Y FUNCIONAMIENTO.	M	180,00
4.14	SUMINISTRO, TRANSPORTE E INSTALACIÓN SALIDA PARA AA EN TUBERÍA EMT 1", CABLE 2X10+12T AWG LIBRE DE HALÓGENOS, CON CAJA RAWELT 5800, TOMA CORRIENTE, INCLUYE CURVAS, Y ACCESORIOS PARA FIJACIÓN. INCLUYE TODOS LAS HERRAMIENTAS, EQUIPOS, INSUMOS Y MANO DE OBRA PARA SU CORRECTA INSTALACIÓN Y FUNCIONAMIENTO.	UND	11,00
4.15	SUMINISTRO, TRANSPORTE E INSTALACIÓN DE CANALETA METÁLICA DE 12X5CM HOMOLOGADA BLANCA PINTURA ELECTROSTÁTICA, INCLUYE TROQUELES TRIPLES, ALAMBRE DE PUESTA A TIERRA Y MARCACIÓN RETIE. ADEMÁS, INCLUYE TODOS LAS HERRAMIENTAS, EQUIPOS, INSUMOS Y MANO DE OBRA PARA SU CORRECTA INSTALACIÓN Y FUNCIONAMIENTO.	M	190,00
4.16	SUMINISTRO, TRANSPORTE E INSTALACIÓN DE TABLERO TRIFÁSICO DE 30 CIRCUITOS CON ESPACIO PARA TOTALIZADOR INCLUYE TOTALIZADOR DE 100A A 200A, PROTECCIONES SEGÚN DIAGRAMA UNIFILAR, CONEXIÓN DE ACOMETIDA DESDE TRANSFORMADOR. ADEMÁS, INCLUYE TODOS LAS HERRAMIENTAS, EQUIPOS, INSUMOS Y MANO DE OBRA PARA SU CORRECTA INSTALACIÓN Y FUNCIONAMIENTO.	UND	1,00
4.17	SUMINISTRO, TRANSPORTE E INSTALACIÓN DE SENSOR ODC0S-I1W INFRARROJO MONTAJE EN TECHO. INCLUYE TODOS LAS HERRAMIENTAS, EQUIPOS, INSUMOS Y MANO DE OBRA PARA SU CORRECTA INSTALACIÓN Y FUNCIONAMIENTO.	UND	6,00
4.18	SUMINISTRO, TRANSPORTE E INSTALACIÓN DE SALIDA PARA SENSOR INFRARROJO EN TECHO, INCLUYE CABLE, CONECTORES Y ELEMENTOS DE FIJACIÓN. INCLUYE TODOS LAS HERRAMIENTAS, EQUIPOS, INSUMOS Y MANO DE OBRA PARA SU CORRECTA INSTALACIÓN Y FUNCIONAMIENTO.	UND	6,00
4.19	SUMINISTRO, TRANSPORTE E INSTALACIÓN DE SALIDA DE TOMACORRIENTE DOBLE CON POLO A TIERRA GFCI, INCLUYE CANA 2400 ALUMINIO FUNDIDO, CONECTORES Y SOPORTES DE TUBERÍA. INCLUYE TODOS LAS HERRAMIENTAS, EQUIPOS, INSUMOS Y MANO DE OBRA PARA SU CORRECTA INSTALACIÓN Y FUNCIONAMIENTO.	UND	1,00
4.20	SUMINISTRO, TRANSPORTE E INSTALACIÓN DE ACOMETIDA DESDE TN1 HASTA UPS Y TR1 3X6+4+8T, INCLUYE TERMINALES. ADEMÁS, INCLUYE TODOS LAS HERRAMIENTAS, EQUIPOS, INSUMOS Y MANO DE OBRA PARA SU CORRECTA INSTALACIÓN Y FUNCIONAMIENTO.	M	15,00
4.21	SUMINISTRO, TRANSPORTE E INSTALACIÓN DE TUBO EMT DE 2" PARA ACOMETIDA DE TGD A TN1. INCLUYE CURBAS, TERMINALES, UNIONES, Y ELEMENTOS DE SUJECIÓN. INCLUYE TODOS LAS HERRAMIENTAS, EQUIPOS, INSUMOS Y MANO DE OBRA PARA SU CORRECTA INSTALACIÓN Y FUNCIONAMIENTO.	M	20,00
4.22	SUMINISTRO, TRANSPORTE E INSTALACIÓN DE MEDIDOR ELECTRONICO CALIBRADO TRIFASICO CONTADOR HIKING ESTATICO TRIFA 5 - 100 A, PARA INSTALAR ANTES DEL TABLERO TN1 PARA TENER MEDIDA DE CONSUMO, INCLUYE CAJA DE MEDIDOR. INCLUYE TODOS LAS HERRAMIENTAS, EQUIPOS, INSUMOS Y MANO DE OBRA PARA SU CORRECTA INSTALACIÓN Y FUNCIONAMIENTO.	UND	1,00
5,00	VARIOS		

5.1	ASEO GENERAL TANTO DE LA PARTE INTERNA COMO EXTERNA Y DONDE SE HAYAN REALIZADO ACTIVIDADES PARA PODER EJECUTAR LA OBRA. (INCLUYE RETIRO DE SOBRANTES AL REALIZAR EL ASEO)	M2	361,01

5. ALCANCE, DURACIÓN Y COSTO TOTAL

Se estima que el alcance de esta intervención pueda abarcar el arreglo total de la cubierta en la zona estipulada por el contratante así mismo subsanar la deficiencia de la red eléctrica en esta misma zona ya que no estaban en funcionamiento en su totalidad, las cantidades están contratadas según los requerimientos necesarios para la construcción de estas actividades.

La duración de este contrato tiene un estimado de 2 meses desde la fecha de inicio del mismo, que fue el 01 de noviembre del 2024 y fecha estimada finalización 31 de diciembre del 2024.

Para la sede de El Carmen de Bolívar , se ha asignado un presupuesto total de $290.825.857,00 con un plazo de ejecución de 4 meses contados a partir de la firma del acta de inicio y sujeto al cumplimiento de los requisitos de ejecución. Este plazo está previsto para finalizar el 31 de diciembre de 2024, salvo ajustes en el cronograma que se justifiquen.

6. ESTADO DE LA INFRAESTRUCTURA Y RECOMENDACIONES

Se observa pocos procedimientos de mantenimientos en la edificación, las zonas comunes se encuentran en estado aceptable, mientras que las oficinas no están en óptimas condiciones eléctricas, la cubierta manifiesta deterioro natural.
El estado de la estructura de la misma debe ser determinada por un profesional en el area.

7. RECOMENDACIONES GENERALES.

Las intervenciones deben hacerse en plenitud de las mismas, es por eso que se recomienda el desalojo total del área a intervenir ya que el retiro de la cubierta y la instalación nueva, así como las intervenciones eléctricas requieren de especificaciones de trabajo de sumo cuidado.

Es indispensable que la entidad asuma los requerimientos del contratista tales como el retiro de equipos de Aire Acondicionado y ambas unidades que los conforman, y el retiro de las redes de internet y la unidad de modem.

Se estima que las recomendaciones del ingeniero estructural estarán amarradas a cualquier modificación del presupuesto, es por eso que cualquiera sea su diagnostico debe ser tomado con prioridad y prontitud para la optimización del presupuesto y el tiempo en obra.

1. INTRODUCCIÓN

El instituto Colombiano Agropecuario (ICA), celebró con la empresa GESTIÓN RURAL Y URBANA SAS, en adelante GRUSAS, el Contrato GGC-089-2024, cuyo objeto es: "ADECUACIÓN DE LA OFICINA LOCAL ICA MAGANGUÉ Y MANTENIMIENTO DE LA OFICINA LOCAL ICA EN CARMEN DE BOLIVAR, DEPARTAMENTO DE BOLÍVAR", el cual se ejecuta en los municipios de Magangué.

Con el objetivo de dar cumplimiento a las condiciones contractuales suscritas, GRUSAS presenta el Plan de Trabajo, dando cumplimiento a las obligaciones contractuales requeridas en los documentos del proceso y en la minuta del contrato (Estudios previos, pliego de condiciones, anexo técnico, etc.) en donde se registra el estado actual de las instalaciones y las necesidades ya evidenciadas por el ICA, en consecuencia, se determinan las actividades a ejecutar en el desarrollo del contrato.

2. DATOS CONTRACTUALES:

Tabla 1 Datos contractuales

No. CONTRATO	CONTRATO GGC-089-2024
OBJETO DEL CONTRATO	"ADECUACIÓN DE LA OFICINA LOCAL ICA MAGANGUÉ Y MANTENIMIENTO DE LA OFICINA LOCAL ICA EN CARMEN DE BOLIVAR, DEPARTAMENTO DE BOLÍVAR"
CONTRATISTA	GESTION RURAL Y URBANA S.A.S
NIT	830.128.894-1
DIRECCION	Carrera 32 No. 25B – 44
CORREO ELECTRÓNICO	gerencia@gru.com.co
TELEFONO	601 244 17 34
REPRESENTANTE LEGAL	Ing. Gildardo Castillo Sánchez
DIRECTOR DE OBRA	Ing. Javier Felipe Castillo
CELULAR	3148517318
INTERVENTORÍA	EQUILATERO ARQUITECTURA E INGENIERÍA S.A.S
PLAZO INICIAL	Cuatro (4) meses
VALOR INICIAL	MIL CIENTO CUARENTA Y DOS MILLONES QUINIENTOS DOCE MIL SETECIENTOS NUEVE PESOS M/CTE ($1.142.512.709,00)

3. DESCRIPCIÓN DEL PROYECTO

LOCALIZACIÓN:

El proyecto se desarrolla en los municipios de Magangué, del departamento de Bolívar

MAGANGUE

Ilustración 2 Localización del proyecto en Magangué (imagen tomada de Google Earth)

En la sede ubicada en el municipio de Magangué se intervendrá la totalidad de la misma, incluyendo el cerramiento perimetral contiguo a la carrera 20

4. ACTIVIDADES A DESARROLLAR

MAGANGUÉ

Tabla 3 Presupuesto y cantidades frente de obra Magangué

PRESUPUESTO OFICINA LOCAL MAGANGUÉ					
ITEM	**DESCRIPCION**	**UND.**	**CANT**	**V/UNIT.**	**SUBTOTAL**
1,00	**PRELIMINARES**				**$ 25.969.267,00**
1,1	Localización y replanteo	m2	815,90	$ 3.301,00	$ 2.693.285,90
1,2	Desmonte de ventanas	m2	4,880	$ 11.772,00	$ 57.447,36
1,3	Demolición manual de mesón en concreto	m2	1,80	$ 21.021,00	$ 37.837,80
1,4	Desmonte de aparato sanitario	und	5,00	$ 28.488,00	$ 142.440,00
1,5	Desmonte de lavamanos	und	4,00	$ 17.296,00	$ 69.184,00
1,6	Desmonte de división para baño en acrílico	m2	2,52	$ 4.763,00	$ 12.002,76
1,7	Demolición manual de enchape o pañete (revoque)	m2	49,12	$ 10.425,00	$ 512.076,00
1,8	Desmonte de marcos y puertas	und	13,00	$ 13.585,00	$ 176.605,00
1,9	Desmonte de poceta en acero inoxidable	und	1,00	$ 17.296,00	$ 17.296,00
1,10	Desmonte y reinstalación de archivadores, consiste en la reubicación de los archivadores en el área documental, esto con el fin de redistribuir el espacio acorde con el acuerdo 049 de 2000 Repositorio Normativo Archivo general de la Nación. Incluye resane de pisos.	m2	40,00	$ 1.509,00	$ 60.360,00
1,11	Instalación de CERRAMIENTO PROVISIONAL en tela verde polietileno de alta densidad y resistencia 65 gr/m2 con una altura de 2,10 m, estacones de madera común para fijación vertical de altura de 2,50 m puesto mínimo cada 2,0 m, elementos de fijación, Incluye: suministro, transporte, instalación, excavación, concreto de fundación preparado en Obra de 17 Mpa - 2500 psi, diámetro aproximado 0,20 m y profundidad aproximada 0,30 m, cable o alambre tensor parte inferior y superior horizontal, mantenimiento, desmonte y todos los demás elementos necesarios para su correcta instalación y operación.	m	190,00	$ 22.096,00	$ 4.198.240,00
1,12	Desmonte de canal en lámina ó PVC	m	28,38	$ 4.612,00	$ 130.888,56

1,13	Desmonte de cielo raso	m2	350,00	$ 7.935,00	$ 2.777.250,00
1,14	Desmonte de cortinas, persianas y cortineros.	m2	34,13	$ 10.564,00	$ 360.549,32
1,15	Desmonte de Aire Acondicionado	und	3,00	$ 137.407,00	$ 412.221,00
1,16	Desmonte de cerramiento en alambre de púas con postes de madera	m	90,00	$ 6.645,00	$ 598.050,00
1,17	Retiro y botada de escombros. Incluye cargue, transporte y botada de material.	m3	100,00	$ 39.157,00	$ 3.915.700,00
1,18	Rocería y limpieza manual y/o con equipo, control de maleza y crecimiento de material vegetal (incluye retiro y disposición final)	m2	1.201,18	$ 2.185,00	$ 2.624.578,30
1,19	Desmonte de teja de asbesto cemento existente. La mano de obra incluye los elementos requeridos de protección para el manejo de esta teja. Incluye manejo especial, cargue, transporte y botada especial al sitio permitido de manejo de estos elementos.	m2	381,00	$ 7.046,00	$ 2.684.526,00
1,20	Desmonte de estructura de cubierta existente. Incluye mano de obra de desinstalación, cargue, transporte y botada con derecho a botadero	m2	381,00	$ 6.974,00	$ 2.657.094,00
1,21	Desmonte de escritorios y sillas. Incluye moverlos o trasladarlos a sitio de acopio debidamente envueltos en plástico	und	10,00	$ 19.182,00	$ 191.820,00
1,22	Poda de ramas	und	30,00	$ 49.706,00	$ 1.491.180,00
1,23	Demolición pisos, andenes, cunetas y bordillos de concreto, en cualquier espesor. Incluye: retiro de malla de refuerzo si existe, compresor neumático con martillo, además recuperación de los materiales aprovechables, cargue, transporte hasta el sitio de acopio indicado por la interventoría y botada de escombros	m3	5,00	$ 29.727,00	$ 148.635,00
2,00	**MOVIMIENTO DE TIERRAS**				**$ 6.464.687,73**
2,1	Excavación manual h= 0-2 m. Incluye cargue y retiro.	m3	87,75	$ 51.093,00	$ 4.483.410,75
2.2	Lleno compactado con recebo común	m3	16,54	$ 119.787,00	$ 1.981.276,98
3,00	**CERRAMIENTO**				**$ 117.709.707,00**
3,1	Mantenimiento cerramiento existente en Pintura anticorrosiva y acabado en esmalte para exteriores.	m	90,00	$ 17.363,00	$ 1.562.670,00
3,2	Cerramiento en tubo redondo galvanizado de 2". Incluye pata de anclaje y tapón metálico pintado con Pintura anticorrosiva y acabado en esmalte para exteriores.	m	90,00	$ 718.220,00	$ 64.639.800,00
3,3	Acero para refuerzo	Kg	3.492,00	$ 6.491,00	$ 22.666.572,00
3,4	Concreto de 3000 psi	m3	30,00	$ 718.355,00	$ 21.550.650,00
3,5	Solado en concreto ciclópeo	m3	15,00	$ 486.001,00	$ 7.290.015,00
4,00	**INSTALACIONES HIDRÁULICAS Y SANITARIAS**				**$ 3.519.255,00**
4,1	Tubería cpvc presión Ø= 1/2" (incl. accesorios)	m	60,00	$ 14.159,00	$ 849.540,00
4,2	Tubería PVC presión Ø= 2" (incl. accesorios)	m	20,00	$ 21.220,00	$ 424.400,00

4,3	Tubería PVC sanitaria Ø= 3" (incl. accesorios)	m	20,00	$ 32.453,00	$ 649.060,00
4,4	Punto hidráulico cpvc de 1/2" (3 m)	und	2,00	$ 65.661,00	$ 131.322,00
4,5	Válvula de registro de 1/2" incluye tapa d e registro	und	2,00	$ 39.461,00	$ 78.922,00
4,6	Tubería drenaje mini S p l i t PVC 1" (incl. accesorios)	m	25,00	$ 20.204,00	$ 505.100,00
4,7	Rejilla para piso en PVC 3"x2"	und	2,00	$ 9.168,00	$ 18.336,00
4,8	Tubería PVC Ø= 4" (incl. accesorios)	m	15,00	$ 36.573,00	$ 548.595,00
4,9	Suministro e Instalación de Tubería PVC-s sanitaria Ø= 2" (Incluye accesorios)	m	15,00	$ 20.932,00	$ 313.980,00
5,00	**CUBIERTA**				**$ 161.893.544,00**
5,1	Suministro, transporte e instalación de cubierta (Teja Termoacústica kingroof ECO - panel tipo sándwich con aislante en polisocianurato PIR SAFE e:30mm Blanco o verde, calibre 28, lámina interna Foil Vinil Color natural). Incluye los caballetes y remates requeridos, además de los accesorios para su debida instalación, y recubrimiento de color.	m2	390,00	$ 136.791,00	$ 53.348.490,00
5,2	Construcción y montaje de estructura metálica con perfilería tipo PERFILERIA TIPO IPE, HEA, PHR-C, PTE para elementos de cubierta, fachada, rampas o áreas de circulación metálicas, según diseño. Incluye: suministro y transporte de láminas, platinas, uniones, soldaduras de acabado o presentación, anclajes y pernos a estructura de concreto y madera. Incluye ensayos a soldaduras, obra falsa y todo el equipo y la herramienta necesaria para el montaje.	kg	7262,30	$ 11.950,00	$ 86.784.485,00
5,3	Canal en lámina galvanizada Cal. 20 S= 50 cm	m	30,00	$ 102.625,00	$ 3.078.750,00
5,4	Cielo raso continuo en PVC blanco resistente a la humedad, incluye estructura metálica de acero galvanizado, tornillos y anclajes necesarios para su correcto funcionamiento, la totalidad de los accesorios necesarios para su correcta instalación, y las perforaciones y resane	m2	299,00	$ 62.481,00	$ 18.681.819,00
6,00	**ENHAPES Y ACCESORIOS**				**$ 3.848.936,50**
6,1	Suministro e i n s t a l a c i ó n d e E n c h a p e e n cerámica 30x60 cm	m2	27,90	$ 76.719,00	$ 2.140.460,10
6,2	Suministro e instalación de piso en porcelanato 60x60	m2	12,60	$ 105.794,00	$ 1.333.004,40
6,3	Suministro e instalación de Guarda escoba en porcelanato	ml	15,50	$ 24.224,00	$ 375.472,00
7,00	**BAÑOS**				**$ 10.414.255,00**
7,1	Sanitario Smart elongado color blanco	und	4,00	$ 573.420,00	$ 2.293.680,00
7,2	Lavamanos d e i n c r u s t a r b l a n c o t i p o s a n lorenzo	und	3,00	$ 308.460,00	$ 925.380,00
7,3	Orinal mediano blanco grifería tipo push	und	2,00	$ 663.517,00	$ 1.327.034,00
7,4	Grifería lavamanos mono control ahorradora	und	4,00	$ 189.672,00	$ 758.688,00

7,5	Grifería lavaplatos Mono control	und	1,00	$ 212.523,00	$ 212.523,00
7,6	Dispensador de toallas de papel	und	2,00	$ 90.008,00	$ 180.016,00
7,7	Dispensador de jabón líquido	und	2,00	$ 70.555,00	$ 141.110,00
7,8	Dispensador de papel higiénico	und	2,00	$ 116.410,00	$ 232.820,00
7,9	Barra de Seguridad Horizontal 36" (92 cm) para Discapacitados en acero inoxidable, de sobreponer a la pared, Ref. 30-AA-8736 de A&A, o equivalente	und	2,00	$ 244.318,00	$ 488.636,00
7,10	Espejo Cristal Biselado de 4 mm colocado flotado sobre muro, para baños W.C.	m2	6,00	$ 117.200,00	$ 703.200,00
7,11	Mesón - Lavamanos en QUARZTONE BLANCO POLAR ancho 60 cm, salpicadero 8 cm y frentero de 4 cm para Baño. Incluye fabricación, suministro e Instalación.	m2	4,00	$ 787.792,00	$ 3.151.168,00
8,00	**PAÑETES, ESTUCO Y PINTURA**				**$ 23.772.988,00**
8,1	Estuco acrílico en muros	m2	50,00	$ 15.923,00	$ 796.150,00
8,2	Pañete muro (incl. filos y dilataciones)	m2	50,00	$ 27.522,00	$ 1.376.100,00
8,3	Pintura exterior en Koraza	m2	526,50	$ 33.804,00	$ 17.797.806,00
8,4	Pintura con vinilo en muros	m2	252,00	$ 15.091,00	$ 3.802.932,00
9,00	**CARPINTERÍA DE MADERA**				**$ 7.955.775,45**
9,1	Mueble inferior de cocina h= 90 cm	m	2,15	$ 780.574,00	$ 1.678.234,10
9,2	Mueble superior de cocina h= 60 cm	m	2,15	$ 484.269,00	$ 1.041.178,35
9,3	Puerta en madera entamborada de 0.80 x 2.05 m	und	11,00	$ 476.033,00	$ 5.236.363,00
10,00	**INSTALACIONES ELÉCTRICAS**				**$ 181.881.404,00**
10,1	Suministro e instalación Unidad acondicionadora Mini Split tipo pared 12.000 btu/h incluye condensadora, evaporadora y control remoto. Compresor INVERTER. Eliminación de bacterias	und	2,00	$ 2.124.225,00	$ 4.248.450,00
10,2	Suministro e instalación Unidad acondicionadora Mini Split tipo pared 24.000 btu/h incluye condensadora, evaporadora y control remoto. Compresor INVERTER. Eliminación de bacterias	und	2,00	$ 4.982.437,00	$ 9.964.874,00
10,3	Suministro e instalación de UPS Trifásico de 10 KVA 208/120V on line, autonomía de 10 min a plana carga	und	1,00	$ 25.212.819,00	$ 25.212.819,00
10,4	Suministro e instalación de Luminaria de emergencia certificada RETIE para cuartos técnicos. Incluye 1 metro de cable encauchetado 3x18 HF FR LS y clavija.	und	7,00	$ 110.307,00	$ 772.149,00
10,5	Suministro e instalación salida de iluminación en tubería EMT 3/4", con caja rawelt 5800, toma corriente, incluye curvas, y accesorios para fijación.	und	46,00	$ 202.006,00	$ 9.292.276,00

10,6	Suministro e instalación salida de interruptor triple en tubería EMT 3/4", con caja rawelt 2400, interruptor, incluye curvas, y accesorios para fijación. AUDITORIO	und	1,00	$ 198.800,00	$ 198.800,00
10,7	Suministro e instalación salida de tomacorriente doble con polo a tierra en muro sobrepuesta en tubería EMT 3/4", con caja rawelt 5800, toma corriente, incluye curvas, y accesorios para fijación.	und	8,00	$ 193.168,00	$ 1.545.344,00
10,8	Suministro e instalación salida de tomacorriente doble BLANCA con polo a tierra en CANALETA METALICA sobrepuesta, toma corriente CABLE 12 AWG TRIPLE FASE AZUL y accesorios para fijación Y FUNCIONAMIENTO	und	22,00	$ 109.342,00	$ 2.405.524,00
10,9	Suministro e instalación de tablero Trifásico de 18 circuitos para red regulada sin espacio totalizador, incluye protecciones 12 d e 1x20A.	und	1,00	$ 962.099,00	$ 962.099,00
10,10	Suministro e instalación salida de tomacorriente doble con polo a tierra REGULADA en CANALETA METALICA sobrepuesta, toma corriente y accesorios para fijación Y FUNCIONAMIENTO	und	22,00	$ 122.784,00	$ 2.701.248,00
10,11	Suministro de mano de obra para el acondicionamiento conexión del medidor de energía, marcación de fases, adecuaciones.	und	1,00	$ 455.523,00	$ 455.523,00
10,12	Suministro e instalación salida de interruptor SENCILLO en tubería EMT 3/4", con caja rawelt 2400, interruptor, incluye curvas, y accesorios para fijación.	und	9,00	$ 142.930,00	$ 1.286.370,00
10,13	Suministro e instalación de transformador de 30 kva regulador 208/120v	und	1,00	$ 20.133.203,00	$ 20.133.203,00
10,14	Suministro e instalación de luminaria LED 60x60 40W 120V AUDITORIO	und	12,00	$ 164.533,00	$ 1.974.396,00
10,15	Suministro e instalación de un sistema de puesta a tierra con tres varillas cobre-cobre de 2,4m x 5/8", soldadura exotérmica y cable 1/0 cobre desnudo 25ml para el transformador.	und	1,00	$ 5.692.799,00	$ 5.692.799,00
10,16	Suministro e instalación de luminaria panel LED redodo de 18W 120V. Para cocina, baños cuartos de aseo, pasillos.	und	20,00	$ 34.017,00	$ 680.340,00
10,17	Suministro e instalación de planta eléctrica de 30 KVA, encabinada, en cuarto separado, con transferencia y tanque de reserva.	und	1,00	$ 51.995.849,00	$ 51.995.849,00
10,18	Suministro e instalación de Acometida trifásica a TRANSFERENCIA DESDE PLANTA Y TRASNFORMADOR 3x1/0+1/0+1/0T, incluye elementos de sujeción	m	45,00	$ 228.907,00	$ 10.300.815,00
10,19	DESMONTE DE REDES ELECTRICAS EXISTENTES. INCLUYE EL RETIRO DE TODAS LAS LUMIANRIAS	gl	1,00	$ 1.836.603,00	$ 1.836.603,00

10,20	SUMINISTRO E INSTALACIÓN DE CABLE TRENSADO 3X12 FASE ROJA O FASE AZUL PARA TOMACORRIENTES DESDE EL TABLERO HASTA LA PRIMERA TOMA DEL CIRCUITO	m	120,00	$ 20.438,00	$ 2.452.560,00
10,21	Suministro e instalación salida PARA AA en tubería EMT 1", cable 2X10+12T awg Libre de halógenos, con caja rawelt 5800, toma corriente, incluye curvas, y accesorios para fijación.	und	11,00	$ 308.877,00	$ 3.397.647,00
10,22	Suministro e instalación DE CANALETA METALICA DE 12X5CM HOMOLOGADA BLANCA PINTURA ELECTROSTÁTICA, INCLUYE TROQUELES TRIPLES, ALAMBRE DE PUESTA A TIERRA Y MARCACION RETIE.	m	90,00	$ 84.332,00	$ 7.589.880,00
10,23	Suministro e instalación de tablero trifásico de 30 circuitos con espacio para totalizador incluyen totalizador de 100A a 200A, protecciones según diagrama unifilar, conexión de acometida desde TRANSFORMADOR.	und	1,00	$ 1.462.522,00	$ 1.462.522,00
10,24	Suministro e instalación de Sensor Odc0S-I1W Infrarrojo Montaje En Techo.	und	5,00	$ 203.360,00	$ 1.016.800,00
10,25	Suministro e instalación salida para sensor infrarrojo en techo, incluye cable, conectores y elementos de fijación.	und	5,00	$ 135.615,00	$ 678.075,00
10,26	Suministro e instalación de salida de tomacorriente doble con polo a tierra GFCI, incluye cana 2400 aluminio fundido, conectores y soportes de tubería y en si todo lo necesario para su funcionamiento.	und	2,00	$ 259.377,00	$ 518.754,00
10,27	Suministro e instalación de canalización 2x3" tubo PVC 3", incluye excavación y relleno con el mismo material excavado	m	50,00	$ 85.251,00	$ 4.262.550,00
10,28	Suministro e instalación de acometida desde tn1 hasta UPS y TR1 2x6+6+8T, incluye terminales	m	15,00	$ 72.843,00	$ 1.092.645,00
10,29	Suministro e instalación de caja CS274 de 0,6x0,6m con tapa con marco y contramarco en ladrillo recocido, INCLUYE EXCAVACIÓN	und	3,00	$ 529.561,00	$ 1.588.683,00
10,30	Suministro e instalación de tubo EMT de 3" para acometida de planta a transferencia	m	20,00	$ 171.819,00	$ 3.436.380,00
10,31	Suministro e instalación de canalización 1x3" tubo PVC 3", incluye excavación y relleno con el mismo material excavado	m	5,00	$ 60.085,00	$ 300.425,00
10,32	Suministro e instalación de reflector LED con panel solar de 200w	und	6,00	$ 404.167,00	$ 2.425.002,00
11,00	**CARPINTERÍA METÁLICA**				**$ 20.334.821,90**
11,1	Marco metálico lámina Cal. 20 a=0.80 m (incl. pintura)	und	11,00	$ 191.184,00	$ 2.103.024,00
11,2	Ventana en aluminio corrediza (vidrio 4 mm)	m2	26,00	$ 342.220,00	$ 8.897.720,00

11,3	División para baño en lámina Cal. 20 (incl. pintura)	m2	13,30	$ 392.003,00	$ 5.213.639,90

Alcance, Duración y costo Total.

Las actividades y cantidades estimadas están alineadas con los requerimientos específicos de la sede de Magangué. Se podrán considerar actividades adicionales en esta sede, según la evaluación del estado de la estructura metálica, que se realizará una vez el equipo esté en campo, se inicie la obra, y se elabore el informe de inspección de la cubierta, conforme a las obligaciones del contrato.

Para la sede de Magangué, se ha asignado un presupuesto total de $761,676,250.33, con un plazo de ejecución de 4 meses contados a partir de la firma del acta de inicio y sujeto al cumplimiento de los requisitos de ejecución. Este plazo está previsto para finalizar el 31 de diciembre de 2024, salvo ajustes en el cronograma que se justifiquen.

5. ESTADO DE LA INFRAESTRUCTURA Y RECOMENDACIONES

Estado de la Infraestructura

Durante la visita de inspección a la obra de la zona ICA, se observaron condiciones deficientes en la infraestructura y mantenimiento de las instalaciones.

Cerramiento y Acceso

- Se encontró deterioramiento en el cerramiento perimetral.
- Gran cantidad de maleza en el cerramiento y alrededores.
- Cerramiento tubular en la entrada.
- Cerramiento de concreto en los costados derecho e izquierdo.
- Cerramiento en alambre de púa para continuar el cerramiento en concreto en ambos costados
- Camino de arena que conduce a las oficinas.

Oficinas

- Estado no óptimo de las ventanas.
- Red eléctrica en mal estado, con quejas por parte de los funcionarios.
- Mal estado de algunas oficinas, incluyendo:
- Ventanas rotas o deterioradas y si seguridad.
- Puertas dañadas.
- Baños fuera de servicio.
- Sanitarios y lavamanos en mal estado y algunos fuera de servicio
- Poceta de laboratorio fuera de servicio
- Cielo raso en deterioro y en parte inexistente y podrido por temas de humedad.

Cubierta

La Cubierta en asbesto cemento se Observa muy deteriorada, en mal estado y con presencia de animales entre la cubierta y el cielo raso

Recomendaciones

- Se requiere dejar la zona libre para poder ejecutar las actividades pertinentes ya que se va a Cambiar las instalaciones eléctricas será necesario cortar la corriente y no se podrá continuar con las funciones.

- Se recomienda seguir el cronograma, para la optimización de recursos, personal y actividades para lograr los objetivos, planteados

- Se evidencian redes de voz y datos, y sistema cerrado de cámaras, adicional a ello unos reflectores, los cuales están dentro de los límites de la intervención, por tal razón, solicitamos el desmonte oportuno de los mismos por parte de la entidad. Y si es de requerirse, su posterior instalación.

- Se debe hacer una inspección completa del estado de la cubierta, toda vez, que en solo algunos pequeños tramos se puede determinar el estado actual de la cubierta, sin embargo, se logra evidenciar que son cerchas metálicas convencionales.
- El reajuste presupuestal y la adición de actividades NO PREVISTAS se realizará una vez se tenga el informe detallado de cubierta y con ellos los recursos disponibles para nuevas actividades, en este sentido, se recomienda dar mayor alcance a las actividades externas y la impermeabilización de algunas de las placas externas de la sede

GESTION RURAL Y URBANA SAS
RL/ GILDARDO CASTILLO SANCHEZ
C.C. 19.265.723 DE BOGOTA D.C.

ANEXO #3

EL SUSCRITO COORDINADOR DEL GRUPO DE ATENCIÓN AL CIUDADANO Y TRÁMITES DE LA DIRECCIÓN TERRITORIAL DE BOGOTÁ

A QUIEN INTERESE
HACE CONSTAR:

Que, realizado el examen de la documentación acreditada por el peticionario, en relación con la solicitud de expedición del **Certificado de Vinculación de Trabajadores con Discapacidad**, se evidencia lo siguiente:

RADICADO:	13EE2024721100000031741
FECHA RADICADO:	16/08/2024
NOMBRE – RAZON SOCIAL:	GESTION RURAL Y URBANA S.A.S.
IDENTIFICACIÓN:	830128894 - 1

A. NUMERO TOTAL DE TRABAJADORES:	21
B. NUMERO DE TRABAJADORES CON DISCAPACIDAD: *Numeral 2 del Artículo 2.2.1.2.4.2.6 del Decreto 1082 de 2015 (Puntaje adicional)*	2
C. NUMERO DE TRABAJADORES CON DISCAPACIDAD CON POR LO MENOS UN (1) AÑO DE VINCULACIÓN O DESDE EL MOMENTO DE LA CONSTITUCIÓN DE LA PERSONA JURÍDICA CUANDO ESTA ES INFERIOR A UN (1) AÑO ACREDITADOS CON CERTIFICADO DE APORTES A SEGURIDAD SOCIAL: *Literal a Artículo 24 Ley 361 de 1997* *Artículos 2.2.1.2.4.2.8 y 2.2.1.2.4.2.17 del Decreto 1082 de 2015 (Factores de desempate)*	2
D. PORCENTAJE DE TRABAJADORES CON DISCAPACIDAD CON POR LO MENOS UN (1) AÑO DE VINCULACIÓN O DESDE EL MOMENTO DE LA CONSTITUCIÓN DE LA PERSONA JURÍDICA CUANDO ESTA ES INFERIOR A UN (1) AÑO: *(C / A) x 100 - Escribir el porcentaje con dos decimales.*	9,52%

ADVERTENCIA: Recuerde que, en caso de ser beneficiado con puntajes adicionales y/o del sistema de preferencias en algún proceso de licitación pública, concurso de méritos, adjudicación y celebración de contratos, el número de trabajadores con discapacidad que dio lugar a la obtención al beneficio verificado por esta Dirección Territorial, deberámantenerse como mínimo por un lapso igual al termino de ejecución del contrato. CD01702

Corresponderá a la Entidad o Empresa contratante verificar lo antes señalado, por lo cual, el contratista deberá aportar la documentación que le sea solicitada y que acredite el cumplimiento de lo establecido, conforme con lo establecido en los artículos 2.2.1.2.4.2.7 y 2.2.1.2.4.2.17 (numeral 3) del Decreto 1082 de 2015.

El Ministerio del Trabajo ejercerá la Inspección, Vigilancia y Control en los asuntos de su competencia.

La vigencia de la presente constancia es de Seis (6) Meses contados a partir de la fecha de expedición y para su validez se debe dar estricto cumplimiento al artículo 2.2.1.2.4.2.7 del Decreto 1082 de 2015

Dado en, Bogotá D.C. el martes, 3 de septiembre de 2024

CARLOS ARTURO RIVEROS MARTINEZ

Verificó y Elaboró: M.Guataquira.

1. INTRODUCCIÓN

El INSTITUTO COLOMBIANO AGROPECUARIO – ICA, suscribió con GESTION RURAL Y URBANA SAS S.A.S**”** , el “ADECUACIÓN DE LA OFICINA LOCAL ICA MAGANGUÉ Y MANTENIMIENTO DE LA OFICINA LOCAL ICA EN CARMEN DE BOLIVAR, DEPARTAMENTO DE BOLÍVAR”Mediante el contrato de obra publica No. GGC-089-2024, con un plazo de ejecución de dos (2) meses, enmarcado dentro del cumplimiento de requisitos legales ambientales.

Con el objetivo de dar cumplimiento a las condiciones contractuales suscritas, GRU SAS presenta el plan de manejo ambiental, dando cumplimiento a las obligaciones contractuales requeridas en los documentos del proceso y en la minuta del contrato (Estudios previos, pliego de condiciones, anexo técnico, etc) en donde se determina presentar un plan de manejo ambiental desarrollado dentro de los términos de este documiento.

2. OBJETIVOS

2.1. OBJETIVO GENERAL

El presente documento tiene como objeto la presentación del Plan de Manejo Ambiental (PMA) durante la ejecución del “ADECUACIÓN DE LA OFICINA LOCAL ICA MAGANGUÉ Y MANTENIMIENTO DE LA OFICINA LOCAL ICA EN CARMEN DE BOLIVAR, DEPARTAMENTO DE BOLÍVAR”, con el fin de mitigar, corregir y compensar los impactos ambientales que se puedan generar durante el desarrollo del proyecto, que consiste en ejecutar todas las actividades de acabados, redes eléctricas e hidrosanitarias,

2.2. OBJETIVO ESPECIFICO

- Realizar una caracterización técnica del proyecto.
- Establecer el área de influencia del proyecto.
- Describir las características físicas, bióticas y socioeconómicas del medio ambiente existente.
- Identificar y evaluar los impactos ambientales potenciales positivos y negativos para las etapas de construcción, operación y abandono del proyecto.
- Diseñar un Plan de Manejo Ambiental donde se establezca un conjunto de sub programas que contengan las medidas preventivas, de mitigación y correctivas para los impactos ambientalmente significativos, de manera tal que se garantice la sostenibilidad del proyecto.

3. ALCANCE DEL PMA

El Plan de Manejo Ambiental– PMA para las obras de “ADECUACIÓN DE LA OFICINA LOCAL ICA MAGANGUÉ Y MANTENIMIENTO DE LA OFICINA LOCAL ICA EN CARMEN DE BOLIVAR, DEPARTAMENTO DE BOLÍVAR”, cumple con los lineamientos legales vigentes en materia ambiental.

Este documento se elaboró bajo la lógica de optimizar y racionalizar el uso de los recursos naturales y culturales, desarrollando las medidas necesarias para prevenir, mitigar, controlar y compensar los impactos negativos que puede ocasionar el desarrollo del proyecto al ejecutar todas las actividades de desmonte y monstaje de estructuras (puertas, cubiertas en teja etc.) ya sean de madera o metálicas y/o, otro material de acabados, redes eléctricas e hidrosanitarias, lo anterior con el fin de caracterizar cada una de las edificaciones que componen el proyecto.

El alcance del Plan de Manejo Ambiental- PMA- es el siguiente:

- Descripción de las principales características del proyecto.
- Identificación de las principales actividades del proyecto.
- Los impactos dimensionados y evaluados cualitativa y cuantitativamente, de tal forma que se estableció el grado de afectación, frente a la susceptibilidad de los sistemas.
- Elaboración de fichas que incluyan los diferentes programas de manejo ambiental encaminados a prevenir, mitigar y compensar los impactos ambientales.
- Elaboración de las fichas y formatos de control y seguimiento del programa de manejo ambiental.
- Definición de indicadores, responsables de medición y cumplimiento de cada programa como también las actividades específicas a desarrollar durante la ejecución de las obras.

4. NORMATIVIDAD APLICABLE

El marco normativo vigente considerado para la elaboración del PMA, compuesto por normas ambientales de carácter general y las específicas para los aspectos de suelo, aire, agua, residuos sólidos y líquidos, vegetación, fauna, paisaje, aspectos sociales y legislación competente para seguridad y salud ocupacional, hace parte de los antecedentes del proyecto y se presentan en tabla 1.

Tabla 1. Marco referencial legal

NORMA	EXPEDIDA POR	TEMA TRATADO
Normas generales o marco.		
Declaración Sobre El Medio Ambiente Y El Desarrollo	Legislación internacional	Aprobada por la Asamblea General durante la Cumbre de Río de Janeiro celebrado del 3 al 14 de junio de 1992. Esta declaración se basa en la Conferencias de Naciones Unidas sobre el Medio ambiente y el Desarrollo, también conocida como una de las Cumbres de la Tierra, celebrada en Estocolmo (Suecia) del 5 al 16 de junio de 1972.
Convenio RAMSAR	Legislación internacional	Firmado en la ciudad de Ramsar (Irán) el 2 de febrero de 1971 por la comunidad internacional, que entró en vigor el 21 de diciembre de 1975. Convención relativa a los humedales de importancia internacional, especialmente como hábitat de aves acuáticas.
Constitución Política de Colombia 1991	Presidencia de la República	En la cual se incluye el Capítulo III. Derechos Colectivos y del Ambiente.
		Artículos 1, 7 y 8 señala los principios fundamentales como la precisión que Colombia es un estado social de derecho, participativo y con prevalencia de interés general; igualmente que el estado reconoce y protege la diversidad étnica y cultural de la nación colombiana y la corresponsabilidad entre el estado y las personas para proteger las riquezas culturales y naturales de la nación.
		Artículo 58; La propiedad es una función social que implica obligaciones, como tal le es inherente una función ecológica
		Artículo 79 y 80 de la Carta Fundamental señala el derecho colectivo a un ambiente sano y la obligación de garantizar la participación de la comunidad en las decisiones en que puedan afectarla, así como el deber de proteger la biodiversidad e integridad del ambiente, además del fomento de la educación para lograr estos fines
		Artículo 332 de la Constitución política señala que el estado es propietario del subsuelo y de los recursos naturales no renovables.

Ley 99 de 1993	Ministerio de Ambiente, Vivienda y Desarrollo Territorial	Por la cual se crea el Ministerio del Medio Ambiente y se reordena el sector público encargado de la Gestión y Conservación el Medio Ambiente y los Recursos Naturales Renovables. En el artículo 13 numeral 5 de la última norma se establece la función de diseñar y promover al interior de los sectores productivos estrategias para la adopción de mejores prácticas ambientales orientadas a mejorar la competitividad, productividad, autogestión e internalización de costos ambientales, como es el caso de esta guía ambiental.
Decreto 1076 de 2015	Ministerio de Ambiente y Desarrollo Sostenible	Por medio del cual se expide el Decreto Único Reglamentario del Sector Ambiente y Desarrollo Sostenible.
Normas sobre los recursos naturales renovables, la protección del medio ambiente y su administración.		
Decreto Ley 2811 de 1974	INDERENA	"Código de los Recursos Naturales Renovables y del Medio Ambiente", en el que se establecen las pautas necesarias para la conservación de los diferentes sistemas naturales que constituyen el medio ambiente. Regula integralmente la gestión ambiental y el manejo de los recursos renovables (agua, bosque, suelos, fauna, etc.).
Decreto 877 de 1976	Ministerio de Agricultura	Sobre áreas de reserva y uso del recurso forestal.
Ley 2 de 1959	Congreso Nacional	Por el cual se dictan normas sobre economía forestal de la Nación y conservación de recursos naturales renovables.
Decreto 1449 de 1977	Presidencia de la República	Sobre las obligaciones de los propietarios en relación con los recursos naturales renovables.
Decreto 1608 de 1978		Reglamentario sobre fauna silvestre.
Decreto 1681 de 1978		Reglamentario sobre recursos hidrobiológicos (no pesqueros).
Decreto 1791 de 1996	Presidencia de la República	Por medio del cual se establece el régimen de aprovechamiento forestal.
Resolución 573 de 1977	Ministerio de Ambiente y Desarrollo Sostenible	Por la cual se establece el procedimiento de los permisos a que se refiere la Convención sobre el Comercio Internacional de Especies Amenazadas de Fauna y Flora Silvestres -CITES-, y se dictan otras disposiciones.
Decreto 2372 de 2010	Ministerio de Ambiente y Desarrollo Sostenible	Por el cual se reglamenta el Decreto Ley 2811 de 1974, la Ley 99 de 1993, la Ley 165 de 1994 y el Decreto Ley 216 de 2003, en relación con el Sistema Nacional de Áreas Protegidas, las categorías de manejo que lo conforman y se dictan otras disposiciones.
Resolución 1503 de 2010	Ministerio de Ambiente y Desarrollo Sostenible	Por la cual se adopta la Metodología General para la Presentación de Estudios Ambientales y se adoptan otras determinaciones.

Resolución 1517 de 2012	Ministerio de Ambiente y Desarrollo Sostenible	Por el cual se adopta el "Manual para la Asignación de Compensaciones por pérdida de Biodiversidad.
Resolución 1415 de 2012	Ministerio de Ambiente y Desarrollo Sostenible	Por la cual se modifica y actualiza el modelo de almacenamiento geográfico (Geodatabase) contenido en la Metodología General para la presentación de Estudios Ambientales adoptada mediante la Resolución 1503 de 2010.
Resolución 188 de 2013	Autoridad Nacional de Licencias Ambientales – ANLA –	Adopta y actualiza el modelo y almacenamiento geográfico (Geodatabase), donde coincide con las capas de cobertura, geomorfopedología y zonificación climática del Estudio de impacto Ambiental.
Decreto 3016 de 2013	Ministerio de Ambiente y Desarrollo Sostenible	Por el cual se reglamenta el Permiso de Estudio para la recolección de especímenes de especies silvestres de la diversidad biológica con fines de Elaboración de Estudios Ambientales.
Resolución 0192 de 2014	Ministerio de Ambiente y Desarrollo Sostenible	Por la cual se establece el listado de especies silvestres amenazadas de la Diversidad Biológica Colombiana que se encuentran en el Territorio Nacional.
Decreto 1715 de 1978	Presidencia de la República	Reglamentario sobre protección del paisaje.
Decreto 2340 de 1984		Por el cual se aclara el Decreto 1594 del 26 de junio de 1984.
Decreto 1865 del 1994		Por el cual se regulan los planes regionales ambientales de las Corporaciones Autónomas Regionales y de las de Desarrollo Sostenible y su armonización con la gestión ambiental territorial.
Normas sobre licencias ambientales		
Decreto 1220 de 2005	Presidencia de la República	Reglamenta el título VIII de la ley 99 de 1993 sobre la licencia Ambiental
Decreto 500 de 2006	Presidencia de la República	Se reglamenta las licencias ambientales
Resolución 2202 de 2006	Ministerio del Medio Ambiente	Por la cual se adoptan los formularios únicos nacionales para la obtención de permisos, concesiones y autorizaciones para el uso y/o aprovechamiento de los recursos naturales renovables y de control del medio ambiente.
Normar de Escombros, Material reutilizable, Material Reciclable y Basuras		
Ley 430 de 1994	Ministerio del Medio Ambiente	Regulación sobre los Residuos Peligrosos
Decreto 1140 de 2003	Presidencia de la República	Se refiere al almacenamiento de los residuos sólidos.
Decreto 838 de 2005	Presidencia de la República	Sobre disposición final de residuos sólidos y se dictan otras disposiciones.
Decreto 2981 de 2013	Presidencia de la República	Se reglamenta la prestación del servicio público de aseo

Decreto 4741 de 2005	Presidencia de la República	Por el cual se reglamenta parcialmente la prevención y el manejo de los residuos o desechos peligrosos generados en el marco de la gestión integra
Resolución 0541 de 1994	Ministerio del Medio Ambiente	Por la cual se regula el cargue, descargue, transporte, almacenamiento y disposición final de escombros, materiales, elementos, concretos y agregados sueltos de construcción, de demolición y capa orgánica, suelo y subsuelo de excavación.
Normas Sobre Manejo Y Control De Emisiones Atmosféricas		
Decreto 02 de 1982	Presidencia de la República	Reglamenta las normas de emisión y calidad de Aire.
Decreto 948 de 1995	Presidencia de la República	Reglamentario de las Leyes 23 de 1973, 9 de 1979 y 99 de 1993 sobre protección de la calidad del aire.
Resolución 898 de 1995	Ministerio del Medio Ambiente	Regula los criterios ambientales de calidad de los combustibles líquidos y sólidos utilizados en hornos y calderas de uso comercial e industrial y en motores de combustión interna de vehículos automotores.
Resolución 1351 de 1995	Ministerio del Medio Ambiente	Por la cual se adopta la declaración denominada "Informe de Estado de Emisiones".
Resolución 627 de 2008	Ministerio del Medio Ambiente	Se establece la norma nacional de emisión de ruido y ruido ambiental.
Decreto 1228 de 1997	Ministerio del Medio Ambiente	Reglamenta la protección y control de la calidad del aire.
Resolución 8321 de 1993	Ministerio de Salud	Fija los requerimientos para el control de ruido y establece normas sobre protección y conservación de la audición, de la salud y el bienestar de las personas por la emisión de ruido.
Resolución 910 de 2008	Ministerio de Ambiente, Vivienda y Desarrollo Territorial	Por la cual se reglamentan los niveles permisibles de emisión de contaminantes que deberán cumplir las fuentes móviles terrestres, se reglamenta el artículo 91 del Decreto 948 de 1995 y se adoptan otras disposiciones.
Resolución 910 de 2008	Ministerio de Ambiente, Vivienda y Desarrollo Territorial	Por la cual se reglamentan los niveles permisibles de emisión de contaminantes que deberán cumplir las fuentes móviles terrestres, se reglamenta el artículo 91 del Decreto 948 de 1995 y se adoptan otras disposiciones.
Resolución 020 de 1996	Ministerio de Medio Ambiente	Mediante la cual se aclara la Resolución 1602 del 21 de diciembre de 1995 y se dictan otras disposiciones.
Manejo de Materiales de Construcción		
Ley 685 de 2001	El Congreso de Colombia	Código de Minas y se dictan otras disposiciones
Resolución 1609 del 2002	Ministerio de Transporte	Por la cual se reglamenta el manejo y transporte terrestre automotor de mercancías peligrosas por carretera
Resolución 1257 de 2021	Ministerio de Ambiente y Desarrollo Sostenible	Por la cual se modifica la Resolución 0472 de 2017 sobre la gestión integral de Residuos de Construcción y Demolición – RCD y se adoptan otras disposiciones.
Normas Sobre Vertimientos Líquidos y Manejo de residuos líquidos, combustibles y Aceites		

Decreto 2858 de 1981	Presidencia de la República	Por el cual se reglamenta parcialmente el Artículo 56 del Decreto-Ley 2811 de 1974 y se modifica el Decreto 1541 de 1978
Resolución 0273 de 1997	Ministerio de Medio Ambiente	Por la cual se fijan las tarifas mínimas de las tasas retributivas por vertimientos líquidos para los parámetros Demanda Bioquímica de Oxígeno (DBO) y Sólidos Suspendidos Totales (SST).
Decreto 1594 de 1984	Ministerio de Medio Ambiente	por el cual se reglamenta parcialmente el Título I de la Ley 09 de 1979, así como el Capítulo II del Título VI - Parte III - Libro II y el Título III de la Parte III Libro I del Decreto 2811 de 1974 en cuanto a usos del agua y residuos líquidos.
Decreto 321 de 1999	Presidencia de la República	Por el cual se adopta el Plan Nacional de Contingencia contra derrames de Hidrocarburos, Derivados y Sustancias Nocivas.
Norma sobre Manejo de Aguas Superficiales		
Decreto 1541 de 1978	Presidencia de la República	Por el cual se reglamenta la Parte III del Libro II del Decreto - Ley 2811 de 1974: "De las aguas no marítimas" y parcialmente la Ley 23 de 1973.
Ley 373 de 1997	Congreso de La Republica	Por la cual se establece el programa para el uso eficiente y ahorro del agua.
Ley 357 de 1997	Congreso de La Republica	Por medio de la cual se aprueba la "Convención Relativa a los Humedales de Importancia Internacional Especialmente como Hábitat de Aves Acuáticas", suscrita en Ramsar el dos (2) de febrero de mil novecientos setenta y uno (1971)
Decreto 1729 de 2002	Presidencia de la República	"Por el cual se reglamenta la Parte XIII, Título 2, Capítulo III del Decreto-ley 2811 de 1974 sobre cuencas hidrográficas, parcialmente el numeral 12 del Artículo 5° de la Ley 99 de 1993 y se dictan otras disposiciones"
Normas relacionadas con la salud y el ambiente. **Algunas de estas normas fueron proferidas por el Ministerio de Salud antes de la expedición de la Ley 99 de 1993; están aún vigentes en cabeza del Ministerio de Medio Ambiente y de las Corporaciones Regionales.**		
Ley 09 de 1979	Congreso de Colombia	Código Sanitario Nacional.
Resolución 601 de 2006, Resolución 909 de 2008 Decreto 948 de 1995 Decretos 02 de 1982 y 2206 de 1983	Presidencia de la República	Disposiciones sobre contaminación del aire.
Decreto 1575 de 2007		Por el cual se establece el Sistema para la Protección y Control de la Calidad del Agua para Consumo Humano.
Decreto 3930 de 2010		Reglamentario en cuanto a usos del agua y residuos líquidos y se dictan otras disposiciones.

Normas en materia social y cultural.		
Ley 21 de 1991	Congreso de la República	Por medio de la cual se aprueba el Convenio número 169 sobre pueblos indígenas y tribales.
Ley 134 de 1994		Sobre Mecanismos de Participación.
Ley 142 de 1994		Sobre servicios públicos.
Decreto 2663 de 1994	Presidencia de la República	Mediante la cual se reglamenta los capítulos X y XVI de la Ley 160 de 1994 en lo relativo a clarificación de la situación de las tierras desde el punto de vista de la propiedad o deslinde de las tierras de dominio de la nación y lo relacionado con resguardos indígenas y las tierras de las comunidades negras.
Decreto 1745 de 1995		Reconocimiento del derecho a la propiedad colectiva.
Decreto 804 de 1995		Reconocimiento y garantía a la etno-educación.
Decreto 1777 de 1996		Protección de reserva campesina.
Ley 1152 de 2007 y sus modificatorios	Congreso de la República	Por la cual se crea el Sistema Nacional de Reforma Agraria y Desarrollo Rural Campesino, se establece un subsidio para la adquisición de tierras, se reforma el Instituto Colombiano de la Reforma Agraria y se dictan otras disposiciones.
Normas referentes a la salud y la seguridad en el trabajo.		

Fuente: GRU SAS

5. METODOLOGÍA

Dentro de la formulación del PMA se instauró la siguiente metodología:

Previo al inicio de la elaboración del documento se estableció el marco normativo vigente para el desarrollo del proyecto, con el objeto de contar con un marco de referencia para establecer los permisos y restricciones.

Con el objeto de definir el alcance de la información para la caracterización ambiental, evaluación de impactos y plan de manejo ambiental, se definieron las áreas de influencia del proyecto, es decir, el espacio geográfico que puede verse afectado (positiva y/o negativamente) por las actividades del proyecto de manera indirecta o directa. Los criterios tenidos en cuenta para definir el área de influencia del proyecto, que podrá verse afectada por el proyecto son:

- Las actividades localizadas colindantes al área a intervenir
- La presencia de áreas de manejo ambiental y social
- La ubicación de los proveedores de fuentes de materiales
- La ubicación del sitio en donde se dispondrán los residuos sólidos
- La existencia de vías principales.

El área de influencia del proyecto se definió como el espacio físico en el que un componente ambiental puede verse afectado indirectamente por las actividades del proyecto, generalmente es definido por el componente social.

Con el objeto de establecer las características y condiciones ambientales del sitio donde se desarrollarán las obras y de esa manera poder establecer el PMA a ejecutar dentro del desarrollo del contrato, se elaboró la Línea Base Ambiental, a partir del análisis de información secundaria y de la información recopilada en las visitas de campo, como se describe a continuación.

- Consulta y análisis de información existente

Para la elaboración de la línea base ambiental se consultó información general del área de influencia donde se llevará a cabo el proyecto, así como:

- Información del IDEAM para la caracterización climatológica.
- Información de la Red de monitoreo de calidad de aire.

- Normatividad ambiental vigente nacional y local, que aplique para este tipo de proyecto.
- Revisión de estudios preliminares elaborados para la zona.

➢ Recolección de información Primaria

Para la obtención de la información primaria se realizaron recorridos de campo, un primer recorrido, con el objeto de realizar el reconocimiento de la zona de intervención e identificar los componentes ambientales de posible intervención. Posteriormente se hizo el trabajo de campo a detalle con el objeto de establecer:

- Las condiciones iníciales del área a intervenir, mediante un registro fotográfico detallado.
- Identificación de especies arbóreas en caso de presentarse durante las inspecciones antes de inciar el proyecto.
- Identificar posibles impactos ambientales que se puedan generar.
- Identificar los tipos de residuos de demoliciones que se pueden generar con
- Localización del proyecto
- Descripción de las obras a ejecutar en el área de influencia.
- Actividades preliminares y de obra a ejecutar: estas fueron descritas de una a una de acuerdo con el alcance del proyecto.
- Demanda ambiental de las obras a ejecutar, es decir la necesidad de afectación o uso de los recursos naturales, información base para la identificación de los permisos ambientales.
- Demanda de mano de obra y necesidad de maquinaria y equipos a utilizar.

En cuanto a la identificación y evaluación de impactos ambientales se realizó a partir de la definición de las obras y actividades a ejecutar, la demanda ambiental y la Línea Base Ambiental; luego se procedió a identificar los posibles impactos a generarse sobre cada uno de los componentes ambientales. Para ello se hizo un análisis del estado actual a partir del resultado de la línea base ambiental.

Posteriormente la identificación de los impactos ambientales para el proyecto se hizo a partir de la siguiente metodología:

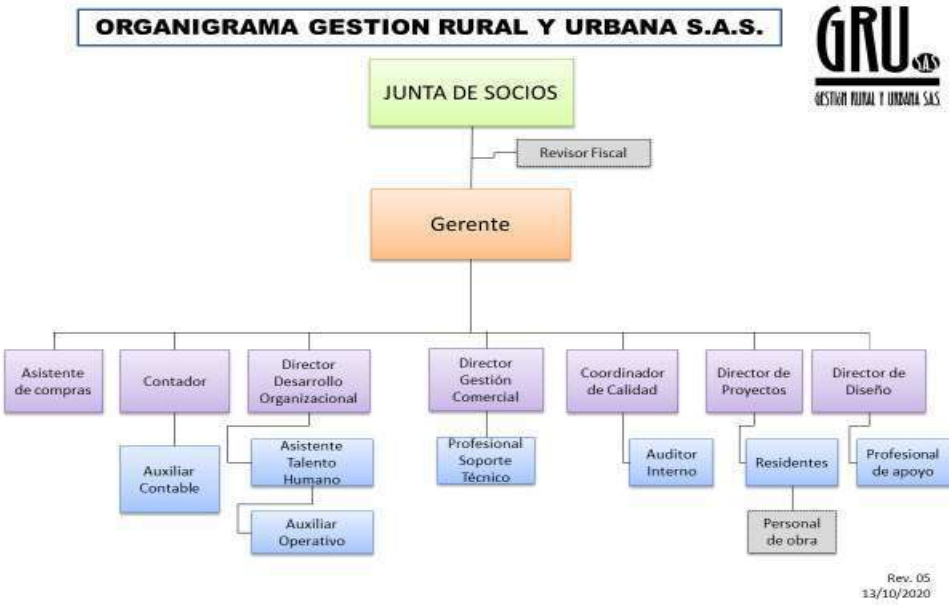
- Descripción de los posibles impactos ambientales
- Descripción de las actividades susceptibles de generar impactos
- Identificación de los impactos a través de una matriz simple, causa-efecto.

- Calificación de los impactos ambientales a través de una metodología ad-hoc, que se desarrollará en el documento.
- Análisis de resultados.

6. DESCRIPCION DEL PROYECTO

6.1. LOCALIZACIÓN

El proyecto se desarrolla en los municipios de Magangué y Carmen de Bolívar, del departamento de Bolivar**.**



6.2. NFORMACIÓN DEL PROYECTO

Se presenta las generalidades del contrato, así como las generalidades de la obra en la Tabla No.2 y el organigrama de la empresa

Tabla 2. Generalidades del Proyecto

Contrato de obra No.	
Objetivo Del Contrato	“ADECUACIÓN DE LA OFICINA LOCAL ICA MAGANGUÉ Y MANTENIMIENTO DE LA OFICINA LOCAL ICA EN CARMEN DE BOLIVAR, DEPARTAMENTO DE BOLÍVAR”
Valor del Contrato	MIL CIENTO CUARENTA Y DOS MILLONES QUINIENTOS DOCE MIL SETECIENTOS NUEVE PESOS M/CTE ($1.142.512.709,00)
Plazo	Dos (2) meses
Nombre del Contratista	GESTIÓN RURAL Y URBANA S.A.S
Nombre del Representante Legal	GILDARDO CASTILLO SÁNCHEZ
Correo Electrónico	grusas@gru.com.co

Fuente: GRU SAS

6.3. DESCRIPCIÓN DEL PROYECTO[1]

A continuación, se hace una breve descripción de la obra.

- Actividades Preliminares visita a la Base Aérea donde se desarrollará el proyecto para coordinar el ingreso del personal que adelantará los trabajos.
- Una vez realizada la visita a la base aérea y en caso de ser necesario se efectuará un cerramiento provisional y perimetral al interior en el área donde se encuentra localizada la torre de control, la disposición de los residuos y /o escombros producto de las actividades propias de adecuación de la torre, dado que esta se entregara por parte de la ICA en obra negra, se dispondrán en los sitios autorizados por el ICA, en caso de ser necesario el cargue de materiales se realizará en la parte interior de la base.
- Ubicación de sitios provisionales para el almacenamiento de materiales, herramientas y equipos, dentro de las instalaciones de la obra en las áreas autorizadas para tal fin, las cuales serán definidas por el supervisor que designe la entidad y la interventoría.

[1] Anexo técnico.

- Instalación de señales informativas y preventivas: Se instalarán las señales donde sea necesario durante toda la ejecución de las actividades.
- Durante toda la realización de la obra, se efectuará el aseo general del área y finalmente se efectuará el cargue y retiro de todos los residuos producto de la ejecución del proyecto.
- Al final de la ejecución, serán recogidas todas las señales preventivas o informativas instaladas y se retirarán del sitio de la obra.
- Retiro del sitio de trabajo.

6.4. ETAPA DE CONSTRUCCIÓN

6.4.1. DESCRIPCIÓN DE LAS ACTIVIDADES DE ADECUACIÓN.

El proyecto se desarrollará con base a las siguientes actividades:

- Previo al inicio de los trabajos se coordinará el ingreso del personal que adelantará los trabajos, y que cumplan con la experiencia solicitada pro el ICA. no sin antes cumplir con lo exigido en el Anexo 1 Anexo técnico.
- Donde sea necesario se instalará el cerramiento del área de trabajo en lona verde, adicionalmente se colocarán las señales de tipo preventivo, informativo y reglamentario que sean necesarias y se adecuen a las obras que se estén ejecutando.

6.4.2. ACTIVIDADES BÁSICAS PARA EL DESARROLLO DEL PROYECTO

- Preliminares.
- Movimiento de tierras
- Estructura
- Mampostería.
- Instalaciones hidrosanitarias.
- Instalaciones eléctricas.
- Instalaciones mecánicas.
- Pañetes.

- Cielo raso
- Acabados e impermeabilizaciones
- Acabados de muros pintura y/o enchapes
- Carpintería metálica
- Carpintería en aluminio y vidrio
- Carpintería acero inoxidable
- Aparatos sanitarios y accesorios
- Aseo y retiro de escombros

6.4.3. EQUIPOS A UTILIZAR EN LA OBRA

Para el adecuado desarrollo de la obra, se suministrarán los equipos, maquinaria, herramientas, materiales y demás elementos necesarios para el cumplimiento oportuno de la programación del contrato.

Durante el desarrollo de la obra se empleará la maquinaria y los equipos relacionados a continuación:

- Taladro y pulidoras
- Equipo de soldadura.
- Equipo de trabajo en alturas (Sistemas de Anclaje, Andamios).
- Herramientas menores tales como picas, palas, carretillas, entre otras.
- Volqueta.
- Mezcladora a gasolina de 1 bulto.
- Pluma.

Por las condiciones específicas del proyecto no se utilizará maquinaria pesada, el cargue en la volqueta se efectuará manualmente debido a los bajos volúmenes de residuos de construcción.

6.4.4. REGISTRO FOTOGRÁFICO

Previo al inicio de los trabajos se realizara un registro fotográfico completo del estado de los sitios donde se llevara a cabo las obras, también se muestra el estado de las vías y andenes aledaños y el detalle de algunas construcciones.

6.5. COMUNICACIÓN CON AUTORIDADES LOCALES Y OTRAS INSTITUCIONES

El proyecto se desarrollara en una zona de bajo flujo peatonal prácticamente de uso residencial, comercial y de servicios. Por tal motivo GESTIÓN RURAL & URBANA SAS informara a los trabajadores de la institución, la intervención de las actividades. Y no se requerirán socializaciones adicionales.

6.5.1. Información Preliminar a la comunidad

Antes de iniciar las labores de obra se tendrá un acercamiento con la institución y residentes aledaños al proyecto para informarles sobre los trabajos que se realizaran.

6.6. ETAPAS DEL PROYECTO A EJECUTAR

A continuación, se listan las actividades constructivas correspondientes a las actividades que hacen referencia el objeto del contrato:

- **Instalación de señales Temporales Preventivas, Informativas y reglamentarias**

Se colocaran señales de tipo preventivo, informativo y reglamentario que indiquen el inicio de las obras, vallas, señales de peligro entrada y salida de volquetas, canecas, cintas reflectivas**,** malla sintética al interior de la base con el fin de evitar el paso de personal no autorizados al sitio de los trabajos.

- **Instalación de Campamento**

Se adecuara un campamento dentro de las instalacionde del ICA para la administración temporal de la obra, ubicado al costado cercano directo de la zona a intervenir. Allí funcionara el área para la interventoría y contratista respectivamente.

- **Adecuaciones**

- En esta etapa y en forma general para las áreas a intervenior en la torre de control se deberá realizar la terminación de la obra gris consistente en mampostería, carpinteria metálica, instalaciones de redes hidrosanitarias, pañetes, cierlo raso, acabados e impermeabilizaciones, carpintería en aluminio y vidrio, carpintería acero inoxidable, vidiros y espejos, cerraduras, aparatos sanitarios y accesorios .

6.7. RECURSOS

6.7.1. Personal

Se relaciona a continuación el personal a contratar mínimo para el desarrollo y ejecución del contrato:

- Director de proyectos (1)
- Residente - Ingeniero Civil - Arquitecto (2)
- Profesional SISO (1)
- Ingeniero especialista eléctrico asesor (1)
- Ingeniero especialista estructural asesor (1).

6.7.2. Maquinaria y equipos

Inicialmente para realizar actividades constructivas, se utilizaran herramientas menores tales como palas, picas, barras, boquilleras, chipotes, niveles de mano, plomadas martillos, masetas, carretillas, entre otras. Así mismo dentro de la maquinaria o equipos mayores se deberán usar los siguientes:

- Mezcladora de 1 bulto
- Equipo de soldadura.
- Andamios certificados.
- Taladro.
- Equipo de alturas.
- Pulidora Manual eléctrica.
- Pluma para subida de materiales.
- Volqueta para transporte de materiales granulares
- Herramienta menor (Picas, palas, carretillas)

7. IDENTIFICACION Y EVALUACION DE IMPACTOS

El presente capitulo contiene la identificación, calificación y análisis de los impactos ambientales con proyecto, susceptibles de presentarse en el Medio Abiótico y Biótico durante la ejecución de las actividades para, **“ADECUACIÓN DE LA OFICINA LOCAL ICA MAGANGUÉ Y MANTENIMIENTO DE LA OFICINA LOCAL ICA EN CARMEN DE BOLIVAR, DEPARTAMENTO DE BOLÍVAR”,** con el objeto de establecer las medidas para el control de los impactos ambientales.

La evaluación de los impactos con proyecto hace referencia a la identificación de los impactos que el proyecto va a generar sobre el ambiente. El procedimiento utilizado para la identificación y evaluación de impactos durante la etapa de intervención fue:

- Identificación y descripción de las actividades susceptibles de generar impactos.
- Descripción, identificación y definición de los impactos ambientales.
- Calificación de los impactos ambientales.
- Análisis de resultados.

7.1. DESCRIPCIÓN DE LAS ACTIVIDADES DEL PROYECTO

A continuación, se describen las actividades susceptibles de generar impactos en el área de influencia directa para la obra.

Tabla 3. Etapas Y Definición De Las Actividades Constructivas Dentro De La Ejecución Del Proyecto

ETAPA	ACTIVIDADES	DESCRIPCION
PRELIMINARES		El campamneto tendrá un área aproximada de 36M2 y se instalara un cerramiento en polisombra con una altura de 2 metros tendrá una acometida provisional eléctrica y una acometida provisional sanitaria, estas actividades serán previas al inicio de la obra y el cerramiento debe ser instalado con anterioridad al inicio de las actividades, unicolor y por ningún motivo poseerá publicidad alusiva al proyecto que se está desarrollando o a la constructora que desarrolla el proyecto.

Construcción	Adecuación de instalaciones torre de control	Instalaciones hidrositarias, instalaciones eléctricas, carpinteria de madera, carpinteria mealica, cielo raso entre otras actividades.
	Manejo de Maquinaria, equipos y Vehículos	Comprende la programación del mantenimiento preventivo y correctivo para que todos los equipos, vehículos y maquinaria al servicio de la obra permanezcan en condiciones óptimas para su operación, cumplan las normas ambientales y la operación se realice en las condiciones de seguridad adecuadas para las partes interesadas y el ambiente.
	Manejo Integral de Residuos Sólidos	Las medidas de manejo de residuos sólidos están orientadas al mantenimiento del estado de limpieza de la obra para darles a los residuos producidos el destino más adecuado desde el punto de vista ambiental.
Adecuaciones y terminación de la obra	Concretos, pañetes, pinturas y acabados en general	Mampostería, pañetes, estructuras: instalación de redes hidrosanitarias, eléctricas, redes mecánicas inyección y extracción de aire. Acabados de muros, pintura y / o enchapes : se realizaran los acabados de acuerdo con las especificaciones técnicas y serán verificados y apobados por la interventoría y supervisor del contrato. Acabados en general: se realizaran los acabados , pintura y carpinterías necesarías para dar cumplimiento al objeto del contrato Cielos rasos: se instalaran todos los cielos rasos contenidos en el contrato. Y que esten en el presupuesto de obra. Acabados: todos las terminaciones serán de primera calidad y tal como se estipula en el anexo técnico y especificaciones del contrato

Fuente: GRU SAS

7.2. DESCRIPCIÓN E IDENTIFICACIÓN DE IMPACTOS AMBIENTALES

En la tabla 4 se definen los impactos ambientales sucesptibles de presentarse en el medio abiótico y biotico, durante la etapa de construcción del proyecto.

Tabla 4. Identificación de Impactos en etapa de "Construcción" y "Construcción y operación"

MEDIO AMBIENTAL		IMPACTO AMBIENTAL	DEFINICIÓN DEL IMPACTO
ABIOTICO	Hídrico	Alteración de los Cuerpos de agua por presencia de sedimentos. Alteración a los sistemas de alcantarillado por presencia de sedimentos.	Se refiere a los cambios en la concentración de materiales sedimentables, en las aguas (vertidas o de escorrentía) a cuerpos de agua de acuerdo a las actividades a realizar
	Atmosférico	Alteración en la calidad del aire	Se refiere al aumento o la disminución de las concentraciones de compuestos como CO, SO2, NO2 y material particulado, producto de la combustión de maquinaria, equipos, vehículos de carga y transporte de materiales como arena y/o escombro.
		Cambio en los niveles de ruido	Se refiere al aumento o disminución en los decibeles según la norma permitida, generado por la operación de maquinaria y equipos (Perforación y Anclaje), así como el cargue y descargue de materiales durante las actividades de la etapa constructiva.
		Presencia de malos olores.	Se refiere al cambio que se produce en este componente, por la generación de olores ofensivos.
	Suelo	Pérdida de suelo	Se refiere al volumen de suelo que será extraído durante las actividades de construcción.
		Generación de Residuos Sólidos	Se refiere al aumento de Residuos generados por actividades de Construcción y demolición

MEDIO AMBIENTAL		IMPACTO AMBIENTAL	DEFINICIÓN DEL IMPACTO
BIÓTICO	Flora	Afectación de la cobertura vegetal existente	No se presentara afctación a ninguna cobertura vegetal.
	Fauna	Ahuyentamiento de la fauna	No se hace necesario esta actividad dado que nho hay presencia de vegetación alrededor de la torre de control.
	Paisajístico	Alteración de la calidad del paisaje	Se refiere a la alteración paisajística que sufrirá el área de influencia en lo que respecta a su visibilidad y la calidad paisajística durante la ejecución de actividades de la etapa preliminar y constructiva.

7.3. IDENTIFICACIÓN DE IMPACTOS

Para la identificación de impactos, se elaboró una matriz simple, causa - efecto, donde se cruzan las actividades definidas con los posibles impactos para establecer su posible interacción. En el Anexo 1. se presenta la matriz de identificacion de impactos ambientales.

8. PLANES Y/PROGRAMAS DE ACCION

A continuación, se presentará los planes o programas para implementar como estrategias de manejo ambiental diseñadas durante la etapa de planeación y las demás que consideren oportunas, para cada uno de los recursos existentes en el área donde se desarrolle el proyecto.

En estos programas o planes se presentan las acciones de manejo ambiental propuestas para prevenir, controlar, mitigar y/o compensar los impactos que se pueden causar por la ejecución de las actividades de las etapas preliminares, construcción y operación del proyecto.

Estos programas tienen como objetivo principal, establecer los lineamentos generales que permitan un adecuado control de los efectos adversos sobre los elementos naturales en sus medios abióticos, bióticos y socio-económicos, durante las actividades que se ejecutarán.

8.1.CAPACITACIÓN AMBIENTAL AL PERSONAL DE OBRA

OBJETIVO DEL PROYECTO

- Capacitar a todo el personal de la obra en temas ambientales, de seguridad en el trabajo del proyecto.
- Prevenir y/o minimizar impactos sobre la salud de los trabajadores y sobre el ambiente.

TIPO DE MEDIDA

CONTROL		**PREVENCIÓN**	X	**MITIGACIÓN**	X	**COMPENSACIÓN**	

IMPACTOS A MANEJAR

Esta actividad involucra todos los impactos identificados en el proyecto.

ACCIONES PARA EJECUTAR

1. Capacitación ambiental al personal de la obra

Se realizarán inducciones al personal nuevo en temas como seguridad industrial, salud ocupacional y protección del medio ambiente, haciendo énfasis a las medidas de manejo ambiental, social y laboral contempladas en el presente PMA.

- El tema principal para abordar en la capacitación deberá referirse a los riesgos a los que están expuestos durante la ejecución de las diferentes obras y actividades del proyecto.

- También se brindarán capacitaciones en las medidas de protección de los recursos naturales, en el manejo de residuos, manejo de aguas y en general en buenas prácticas ambientales.

2. Programación de las Capacitaciones

- Debido a lo fluctuante de los trabajadores que participan en las labores, se capacitará a todo el personal que ingrese a la obra.
- Se establecerá el cronograma de capacitaciones en donde se indique la fecha, el tema a tratar y a quien va dirigida la capacitación.
- Se presentará el avance del cronograma.

3. A quién van dirigidas las Capacitaciones

- A todos los trabajadores de la obra.
- La capacitación ambiental se dará en forma de talleres.

4. Responsables de las Capacitaciones

- Profesional SISOMA
- ARL del Contratista de Obra.

5. Temas propuestos para Tratar

A continuación, se propone un listado de temas de capacitaciones, que debe ser revisado y actualizado si se requiere:

- Técnico: alcance técnico del proyecto (tipo de obra, especificaciones técnicas a aplicar, cantidades de obra y presupuesto de obra, etc.). Responsable: Director de Obra.

- Socialización del PMA. Responsable: Profesional SISOMA

- Ambientales: protección de fauna y flora; protección de cuerpos de agua; control de emisiones y ruido; manejo de materiales de construcción; manejo integral de residuos líquidos, escombros, residuos reciclables y basuras; manejo de señalización y de tráfico. Responsable: Profesional Ambiental.

- Seguridad: información de seguridad social (EPS, ARL y Pensión); plan de emergencias y contingencias; programa de salud ocupacional; notificación de riesgos según el panorama de riesgos; uso de elementos de protección personal;

procedimientos de trabajo seguros; manejo de maquinaria y equipos; entrenamiento en alturas, manejo de sustancias químicas., Responsable: Inspector en seguridad y salud en el trabajo (SST).

Dependiendo de la logística de la obra, las capacitaciones se pueden realizar en los frentes de obra, con el objetivo de garantizar que todo el personal recibe la capacitación. Estas capacitaciones deben estar dirigidas a todo el personal que ingrese, incluye operarios de maquinaria y equipos, obreros, maestros y ayudantes, como también personal profesional y de administración.

LUGAR DE APLICACIÓN				
Las capacitaciones se realizarán en los sitios de acopio temporal y en el frente de obra.				
RESPONSABLE DE LA EJECUCIÓN				
Director del proyecto/				
SEGUIMIENTO Y MONITOREO

8.2. PROGRAMA DE SEÑALIZACIÓN FRENTES DE OBRAS Y SITIOS TEMPORALES

OBJETIVO DEL PROYECTO

- Demarcar y aislar las áreas de trabajo para reducir las posibilidades de accidentes de las personas que circulen por las zonas de las obras, o ponga en riesgo equipos o materiales de la obra.
- Garantizar la seguridad de la población asentada en la zona de influencia indirecta del proyecto en la etapa de operación**.**

TIPO DE MEDIDA

CONTROL		**PREVENCIÓN**	X	**MITIGACIÓN**		**COMPENSACIÓN**	

IMPACTOS A MANEJAR

- Generación de residuos sólidos domésticos e industriales

- Generación de conflictos y expectativas
- Alteración de la movilidad peatonal y vehicular
- Afectación de la infraestructura vial
- Generación de accidentes
- Afectación de acceso a predios residenciales, comerciales y de servicios
- Cambios en la calidad físico-química y bacteriológica del agua
- Alteraciones en la capacidad de transporte del agua (acumulación de sedimentos)

ACCIONES PARA EJECUTAR

Medidas de señalización para el Manejo Ambiental:

- Durante todo el proyecto (jornadas diurna y nocturna), se señalizará totalmente el área con cinta o malla traslúcida, para evitar que personas ajenas al proyecto, ingresen y sufran lesiones.
- Los materiales de obra y los escombros se ubicarán en sitios que no interfieran con el tránsito peatonal. Además, se demarcarán y acordonarán con cinta de señalización de mínimo 12 cm de ancho con franjas amarillas y negras con una inclinación que oscile entre 30º y 45º (mínimo 2 líneas paralelas) y señalizadores tubulares.
- Los señalizadores tubulares o colombinas, que se instalen deben por lo menos tener un espaciamiento de 2 m.
- Todos los elementos de señalización deberán permanecer limpios y bien colocados durante las actividades del proyecto.
- Una vez finalice la jornada laboral diaria, se deberá dejar el frente de obra en las mejores condiciones de señalización, teniendo en cuenta que la cinta y malla cumplan con su función.
- No se podrá depositar o arrumar señalización en mal estado en el frente de obra o en sitios cercanos a ella.
- Se hará reposición o cambio de la señalización, malla y poli sombra cuando lo consideren necesario.
- En todas las áreas del frente de obra y los sitios de infraestructura temporal, como campamento, sitios de acopio, áreas de almacenamiento de herramientas se utilizarán señales informativas, preventivas según sea el caso.
- Dentro del campamento, se deberá instalar señalización que demarque cada una de las áreas en que se divide el campamento como son: oficinas, baños, áreas de acopio de materiales y lugares restringidos. Además, se contará con señales que indiquen el uso y ubicación del extintor, botiquín, rutas de evacuación y uso de EPP.
- En el campamento se señalizarán las rutas de evacuación interna del personal con avisos reflectivos.
- Las señales de seguridad deben estar diseñadas de acuerdo con los colores de seguridad y contraste y las formas geométricas y significados determinados en las normas técnicas NTC-1461 – Higiene y Seguridad, colores y señales de seguridad,

NTC 1931 – protección contra incendios – señales de seguridad y NTC 1937 – Señalización en la Industria de la Construcción.

- Solo deben permanecer en los frentes de obras las señales y dispositivos que sean aplicables o vigentes a las condiciones existentes y en consecuencia serán removidas o cubiertas las que no sean necesarias.

En caso de tener acopio de escombros se demarcará con cinta de señalización y párales tubulares.

Medidas de señalización para el tránsito peatonal

A fin de prevenir mayores traumatismos en la circulación de los peatones (Personal militar, residentes de la base o comunidad en general) en el área de influencia directa y sobre todo para evitar accidentes, se establecerán senderos para facilitar el tránsito peatonal y para personas con discapacidad de ser necesario. El ancho del sendero no debe ser inferior a 1.0 metro, tal y como se muestra en la siguiente figura:

Para los senderos peatonales se utilizará cinta de señalización que indique PELIGRO (en las 2 líneas horizontales) y malla fina sintética que demarque todo el perímetro del frente de trabajo. La cinta y la malla estarán apoyadas sobre señalizadores tubulares, estas permanecerán durante el transcurso de las obras. Así mismo se colocará señales informativas que indiquen SENDERO PEATONAL.

Aun cuando no esta considerado realizar excavaciones profundas, se incluye este numeral, en los casos que sea necesario realizar excavaciones profundas considerables, zanjas, pozos o cajas de inspección, deberán ser demarcados y señalizados con señales de prevención como se muestra en la siguiente figura, los cuales deben ubicarse mínimo con sesenta centímetros antes de la zona de intervención, como se muestra en la siguiente figura:

Igualmente, durante la todas las etapas del proyecto, se debe garantizar la señalización con el fin de no generar traumatismos al ingreso y salida a los mismos.

8.3. PROYECTO DE MANEJO Y DISPOSICIÓN FINAL DE RESIDUOS SÓLIDOS CONVENCIONALES Y ESPECIALES

OBJETIVO DEL PROYECTO							
Cumplir con la política de gestión integral de residuos sólidos (PGIRS) del contratista.							
TIPO DE MEDIDA							
CONTROL		**PREVENCIÓN**	X	**MITIGACIÓN**	X	**COMPENSACIÓN**	

IMPACTOS A MANEJAR

- Cambios en la calidad físico-química y bacteriológica del agua.
- Modificación en las propiedades fisicoquímicas y/o biológicas del suelo.
- Generación de residuos sólidos domésticos e industriales.
- Cambios en la percepción visual del paisaje.

ACCIONES PARA EJECUTAR

Para cumplir con el manejo integral de los residuos sólidos se debe ejecutar el siguiente procedimiento:

- ✓ Clasificar y reducir en la fuente.
- ✓ Recolectar y almacenar temporalmente.
- ✓ Disposición final —reutilización, reciclaje y tratamiento.

1. **Clasificación y reducción en la fuente:** De acuerdo con el tipo de residuo generado se realiza la clasificación en el origen, de la cual depende que el residuo se pueda reciclar o reutilizar. El contratista debe desde el inicio del proyecto, tener claro el tipo de residuo que generará y capacitar a su personal en la separación y clasificación de los mismos desde la fuente. Para el proceso de reducción de residuos, el contratista deberá contemplar las siguientes alternativas de acuerdo con la información de la tabla 5 en donde se muestra la clasificación, descripción y alternativa de reducción de los residuos sólidos que se podrán generar durante la ejecución del proyecto.

Tabla 5.. Características de los posibles tipos de residuos y su alternativa de reducción.

TIPO DE RESIDUO	CARACTERÍSTICAS	ALTERNATIVA DE REDUCCIÓN
Chatarra	Partes y piezas de equipos, residuos de varillas, tuberías, aceros etcétera, provenientes de las diferentes actividades constructivas. Se consideran residuos aprovechables.	Reincorporación a la operación. Las llantas usadas se deberán entregar en los puntos de recolección establecidos por los productores. Igualmente se podrán utilizar en la estabilización de taludes, muros de contención, conformación de diques, materas, parques infantiles; para los cuales se podrán realizar convenios con los interesados en la recepción y uso de tales elementos quienes los manejarán con el lleno de los requisitos técnicos y normativos.
Empaques, envases y embalajes.	Materiales diversos —metal, cartón, plástico y madera— relacionados con insumos y otras compras del proyecto. Son aprovechables siempre y cuando no provengan de elementos o sustancias identificadas como peligrosas.	Hacer convenios con la comunidad o con los recicladores autorizados para su reutilización o reciclaje; esto deberá contar con la aprobación de la Interventoría.
Residuos peligrosos.	Residuos de productos químicos: aceites, pinturas, envases de combustibles, lubricantes, solventes, cemento y pinturas. Residuos provenientes de enfermería atención primaria o botiquines. Materiales utilizados para contener o recoger derrames de combustibles —estopa— Otros elementos como: guantes, overoles y otros textiles contaminados.	Entregar al proveedor autorizado para la recolección y tratamiento de residuos peligrosos. De manera alternativa en tal caso de ser necesario establecer convenios con proveedores para devolución de baterías, tonners, cartuchos de impresoras, envases de combustible, filtros etc.

	Baterías secas utilizadas en equipos de comunicación o en aparatos electrónicos. Algunas contienen elementos pesados. Cintas de máquina, tóner de impresoras y fotocopiadoras. Filtros de aire, combustible o aceite, utilizados por vehículos y alguna maquinaria y equipo	
Residuos sólidos domésticos	Se refiere a los desperdicios orgánicos provenientes de los terrenos o zonas donde se lleven a cabo las obras, son considerados residuos aprovechables.	Una vez clasificado el material, se deben entregar a la Empresa Recicladora correspondiente, recicladores o la empresa de aseo de Bogotá

Fuente: Adaptado de MAVDT, 2007.

Luego de aplicar las medidas de clasificación y reducción, el material resultante debe tener un almacenamiento temporal y posteriormente será entregado al operador de aseo más cercano al frente de obra.

2. Almacenamiento temporal: Los residuos generados por el proyecto deben ser clasificados y almacenados temporalmente en contenedores claramente identificados y rotulados los cuales se encontrarán ubicados en el frente de obra y serán fácilmente identificables. Se instalará un (1) punto ecológico en la obra, de acuerdo con la clasificación de los residuos.

Esquema tipo de zona de almacenamiento de los residuos sólidos.

- ✓ Tipo 1, Residuos reciclables y reutilizables: Como se dijo anteriormente corresponden a este grupo materiales el vidrio, aluminio, papeles, metales, plásticos, cauchos, madera y chatarra, que deben ser recolectados y almacenados en un lugar que se encuentre protegido de los cambios climáticos, hasta que tengan un volumen considerable para que sean recolectados por organizaciones existentes en la zona del proyecto o en su defecto serán entregados al operador del servicio de aseo.

- ✓ Tipo 2. Residuos peligrosos o contaminados: Este tipo de residuo no puede ser mezclado con ningún otro, teniendo en cuenta sus características de peligrosidad, por tanto, el contratista, desde el momento de su producción, debe recolectarlos y colocarlos en un sitio diseñado para tal fin, puede ser una caneca en perfectas condiciones limpia y seca, la cual debe estar rotulada conforme lo establecen las normas de seguridad. Es decir, deberá contar con su respectiva hoja de seguridad, y características de peligrosidad. Así mismo estos recipientes deberán estar etiquetados y rotulados, de acuerdo con la normativa. Un ejemplo de esto se muestra en el siguiente cuadro identificación de residuos peligrosos. La periodicidad de la recolección se establecerá con las entidades autorizadas para esta labor

Tabla 6 Identificación de residuos peligrosos.

Código[2]	Tipo de residuo	PICTOGRAMA
Y8	Aceites usados	
Y31	Baterías	
A1030	Luminarias	

Decreto 4741 de 2005.

- ✓ Tipo 3. Residuos no aprovechables — basuras: Como su nombre lo indica son residuos que no tienen ningún valor y van normalmente a los rellenos sanitarios.

    - La recolección inicial debe hacerse en canecas (puntos ecológicos) ubicadas en el frente de obra, se dispondrán de bolsas de basura que diariamente se recogerán y se acopiarán en el campamento o en el sitio que se haya dispuesto para tal fin.
    - Durante esta etapa de recolección y almacenamiento, el contratista debe implementar el programa de capacitación sobre el manejo integral de residuos sólidos, de manera que se garantice el cumplimiento de la política integral de manejo de residuos sólidos, enfatizando sobre el principio de las “3 R”, es decir, Reutilizar, Reducir y Reciclar. Esta actividad es parte del programa de capacitación ambiental.

3. Disposición final: Tipo 2: Residuos peligrosos: deberán ser almacenados temporalmente en áreas adecuadas con el lleno de los requisitos normativos para cada tipo de residuo, para luego ser trasladados directamente por la empresa contratada a los sitios autorizados por las autoridades ambientales para ser tratados o incinerados:

[2] Decreto 4741 de 2005.

4. Operación de áreas de servicio: Teniendo en cuenta lo anterior se proponen las siguientes medidas de manejo para el sitio de almacenamiento temporal de residuos: Todo el personal que esté involucrado con la manipulación de residuos peligrosos deberá contar como mínimo con los siguientes elementos de protección personal:

- Tapabocas.
- Guantes de caucho.
- Bata u overol.
- Casco.
- Botas de caucho.

Los guantes deben ser reforzados en la palma y los dedos, para evitar cortes y punzadas. Estos deben colocarse por encima de la manga. Los residuos peligrosos deberán ser trasladados directamente por la empresa contratada por el contratista, a los sitios autorizados por las autoridades ambientales para ser tratados o incinerados.

Recolección de residuos Peligroso y/o Especiales

(Cantidad de residuos sólidos llevados a sitios autorizados (kg/mes) / cantidad de residuos sólidos domésticos generados (kg/mes)) * 100	Disposición final de residuos ordinarios	Indicador de cumplimiento	Mensual	Se deberá llevar un registro semanal de generación de residuos sólidos, para lo cual se puede llevar un formato que contenga por lo menos la siguiente información: Fecha, incluyendo el día del reporte, tipo de residuo (aprovechable, no aprovechable, peligroso), característica del tipo de residuo (inorgánico, orgánico, vidrio, plástico, papel cartón, chatarra, peligrosos, madera y escombros), sitios de recolección, volúmenes de cada uno de ellos.

8.4. PROGRAMA DE MANEJO CONSTRUCCIÒN Y DEMOLICIÒN

OBJETIVO DEL PROYECTO

- Minimizar y/o controlar los impactos que se producen sobre el medio ambiente, por la disposición de material sobrante.
- Cumplir con las normas legales vigentes para el manejo, transporte y disposición final de los materiales sobrantes de excavación y demolición

TIPO DE MEDIDA

CONTROL		**PREVENCIÓN**		**MITIGACIÓN**	X	**COMPENSACIÓN**	

IMPACTOS A MANEJAR

- Modificación en las propiedades físico químicas y/o biológicas del suelo.
- Cambios en la capacidad de uso del suelo.
- Generación de procesos erosivos o de remoción en masa.
- Cambios en la calidad del aire.
- Generación de material estéril y escombros.
- Alteración de las características geomorfológicas del suelo.
- Cambios en los niveles de presión sonora.
- Cambios en el uso del suelo.

- Afectación de la movilidad peatonal y vehicular.
- Afectación de la infraestructura vial.
- Generación de accidentes.
- Afectación de acceso a predios residenciales, comerciales y de servicios

ACCIONES A EJECUTAR

Es de anotar que una vez que se generen los materiales de construcción, estos serán separados con el fin reutilizar los que sean técnicamente viables y los sobrantes serán transportados al sitio de disposición final.

BUENAS PRACTICAS (BA) para los RCD:

- ✓ Los residuos sólidos provenientes de las actividades constructivas no se podrán disponer en el espacio público, ni en zonas verdes, de ronda hidráulica o zonas de manejo y preservación ambiental de los cuerpos de agua.

- ✓ Es necesario adecuar sitios para el almacenamiento temporal de residuos sólidos o de excavaciones en caso de realizarcen, se debe verificar cuales de estos residuos u escombros de excavaciones se pueden reutilizar, los cuales deben estar debidamente cubiertos con materiales que eviten la acción erosiva del agua y el viento. Estas zonas deben contar con canales perimetrales y sus respectivas estructuras de control de sedimentos.

- ✓ Este tipo de residuos se podrán reutilizar siempre y cuando no estén contaminados con materia orgánica, plásticos, maderas, papel, hierro o sustancias peligrosas.

- ✓ Está prohibida la reutilización in situ de RCD, sin su previa clasificación (ordinarios, especiales y peligrosos)

- ✓ Cuando se realice el transporte de materiales sobrantes por vías públicas en operación o en cercanías de centros poblados debe cumplir con lo establecido en la Resolución 541/94, por medio del cual se regula el cargue, descargue, transporte, almacenamiento y disposición final de escombros, materiales, elementos, concretos y agregados sueltos, de construcción, de demolición y capa orgánica, suelo y subsuelo de excavación

- ✓ En los sitios de recolección de material sobrante de excavación no se permitirá la presencia de residuos que puedan generar contaminación; se debe asegurar la limpieza total y permanente de los sitios de recolección.

- ✓ En caso de caída de residuos durante la recolección, es deber del recolector realizar inmediatamente la limpieza correspondiente.
- ✓ No se permite el almacenamiento temporal de material sobrante de excavación en zonas de circulación peatonal y/o vehicular, éste debe ser recogido en un periodo no superior a 2 días.
- ✓ No se permiten actividades de cargue, descargue o almacenamiento temporal de material sobrante de excavación en zonas verdes, arborizadas, reservas naturales, áreas de recreación, parques, rondas de ríos, quebradas, humedales o cualquier otro cuerpo de agua.
- ✓ El transporte de material se deberá realizar por vías autorizadas para el tránsito de volquetas sencillas, doble-troques o tracto-mulas y en el horario permitido por la autoridad competente.
- ✓ Las vías tanto para acceder a los predios donde se dispondrá, así como las vías internas dentro de estos debe estar señalizado y preverse un plan de recuperación y mantenimiento de estas vías que evite su daño por el impacto sobre estas por el tráfico de volquetas y maquinaria.
- ✓ Se debe prever las señalizaciones y medidas de seguridad (velocidad de rodamiento, sitios de parqueo y horarios) para mitigar el impacto por el aumento del tránsito de vehículos pesados en las vías de acceso.
- ✓ Inspecciones a volquetas y equipos de transporte de material sobrante
- ✓ La carga debe ser cubierta para el control de emisión de partículas de polvo y el derrame de material durante el transporte. La cobertura debe ser de material resistente y estar sujeta firmemente a las paredes exteriores del contenedor o platón, con una caída de por lo menos 30 cm. del borde superior del platón.
- ✓ Los vehículos no podrán arrastrar material adherido a sus llantas en áreas pavimentadas. Por tanto, se debe disponer de los elementos y el personal para limpiar el material adherido entre las llantas antes de salir a la vía pavimentada.
- ✓ El volumen de material de excavación no puede sobrepasar el nivel de los platones o volcos de los vehículos. Estas inspecciones tendrán frecuencia semanal a la salida de frentes de obra y a la llegada de la cantera.

8.5. PROGRAMA CONTROL DE EMISIONES ATMOSFÉRICAS

OBJETIVO

- Definir las medidas para controlar la generación de emisiones atmosféricas y el ruido en las áreas aledañas a las actividades constructivas.
- Controlar las emisiones atmosféricas por la operación de la maquinaria y equipo utilizado durante la obra

TIPO DE MEDIDA

CONTROL	**X**	**PREVENCIÓN**		**MITIGACIÓN**		**CORRECCIÓN**	

IMPACTOS A MANEJAR

- Cambios en los niveles de ruido
- Afectaciones a la salud
- Cambios en la calidad de aire

ACCIONES A EJECUTAR

Se implementará las siguientes medidas generales para prevenir o minimizar las emisiones atmosféricas, las Consideraciones generales

- ✓ Para tiempo seco (días de no lluvia), se deberá realizar humedecimientos de por lo menos 2 veces al día, sobre las áreas desprovistas de acabados, al igual que a los materiales tengan en el frente de obra y que sean susceptibles de generar material particulado.

- ✓ Se prohíben las quemas a cielo abierto en los lugares donde se adelantan las obras.

- ✓ Para la limpieza de áreas será necesario el barrido de la superficie, con cepillos tipo EDIS garantizando el retiro del particulado de mayor tamaño y se dará cumplimiento a los Programas manejo de materiales de construcción y de escombros.

- ✓ Se solicitará a todos los vehículos que laboren en el proyecto el registro de la revisión tecnicomecánica o en caso de que no lo requiera el certificado de emisión de gases expedido en un sitio autorizado por la autoridad competente. La velocidad de las volquetas en el frente de obra no deberá superar los 20 Km/h con el fin de evitar la generación de emisiones fugitivas**.**

- ✓ Para control de partículas en el momento de efectuar demoliciones, que generen afectaciones a los predios y a los peatones en general, se deberá colocar malla traslúcida o azul con una altura de mínimo 2 m, alrededor del área a intervenir.

Control del proceso de corte de material prefabricado

- ✓ Si se realiza el uso de adoquín este se comprara en presentación de medias unidades, para minimizar el corte.

- ✓ Se contará con una caneca con agua en donde se sumergirá el prefabricado antes de ser sometido a corte para minimizar las emisiones atmosféricas generadas en el proceso.

- ✓ Mantener toda la zona libre de material de residuos de ladrillos, adoquín o bloque de manera que el material no sea arrastrado por escorrentías generando obstrucción al sistema de alcantarillado.

- ✓ Se deberá limpiar el área de trabajo mínimo cada jornada, con pala y cepillo.

- ✓ No se debe trascender el material residuo del cubículo, para ello se debe realizar limpieza de manera constante.

Control de Ruido

- ✓ Las actividades de las cuales se generen ruido se realizarán durante la jornada diurna, para evitar problemas e inconvenientes con la comunidad.

- ✓ En caso de presentarse quejas de la comunidad por ruido, se debe suspender la actividad. Se debe analizar el problema y tomar las medidas correctivas para mitigar el ruido, estas deben ser presentadas a la Interventoría para su aprobación. Si la Interventoría, así lo considera, podrá solicitar al contratista la realización de un monitoreo de ruido para verificar el nivel de ruido que está produciendo la cortadora y de esa manera tomar las acciones correctiva.

- ✓ Se realizará continuamente mantenimiento del estado general de las volquetas, así como de los equipos y maquinaria.

- ✓ Las actividades que sobrepasen los niveles de ruido permitidos deben hacer con pausas cada dos horas con el fin de evitar conflictos con las comunidades. La persona que se encuentre recibiendo o dejando material y que esté expuesta al ruido de la cortadora debe colocarse el tapa oídos tipo copa, mientras permanezca en el área.

LUGAR DE APLICACION

- ✓ **Área de Ejecución desde su punto inicial a su punto final**

8.6.PROGRAMA PARA EL PAISAJE

OBJETIVO

- Mejorar la calidad paisajística producida por la ejecución en las obras en la Base Aerea
- Establecer los procedimientos básicos para el adecuado manejo paisajístico.

TIPO DE MEDIDA

CONTROL	X	PREVENCIÓN	X	MITIGACIÓN	X	CORRECCIÓN	

IMPACTOS A MANEJAR

- **Alteración del paisaje.**

ACCIONES PARA EJECUTAR

Durante el desarrollo del proyecto la afectación paisajística en los puntos que serán intervenidos por la presencia de maquinaria, volquetas, los materiales granulares y en general por las actividades para la terminación de la Fase II, para lograr la reducción de este impacto se propone las siguientes acciones:

- ✓ Se realizará el respectivo cerramiento con poli sombra con el fin de delimitar el área del proceso constructivo.

- ✓ Por lo anterior se dará instrucción a los trabajadores y operarios en cuanto a la organización de cada área y zona establecida para determinado fin, lo que permitirá la realización de obras en forma ordenada facilitando la movilidad en los frentes de trabajo y evitando la ocurrencia de accidentes al personal que labora y los usuarios de la base.

Si se cumplen las disposiciones del componente D en cuanto manejo y disposición de materiales de construcción y de escombros, el impacto sobre la calidad paisajística será minimizado.

LUGAR DE APLICACION

- ✓ **Área de Influencia Directa de ejecución de la Obra**

PERSONAL REQUERIDO

8.7.PROGRAMA MANEJO DE CAMPAMENTOS Y CENTROS DE ACOPIOS

OBJETIVO

Instaurar las medidas y acciones a ejecutar para manejar los impactos generados por la instalación y funcionamiento del campamento y almacén de depósito de materiales menores para mitigar cualquier afectación que se pueda generar a los Recursos naturales del sector.

TIPO DE MEDIDA

CONTROL	X	PREVENCIÓN	X	MITIGACIÓN		CORRECCIÓN	

IMPACTOS A MANEJAR

- Alteración calidad de aire
- Aumento niveles de ruido

ACCIONES PARA EJECUTAR

El campamento se instalará en el sitio autorizado por la supervisión de la entidad y la interventoria.

Por lo anterior, el centro usado para las actividades administrativas de la obra estará debidamente señalizado, y los espacios adaptados de tal forma que se eviten accidentes laborales.

Así mismo se debe proveer, según los protocolos de seguridad industrial, al campamento (centro) con equipos para control de incendios (extintores) y material de primeros auxilios como:

- ✓ Camilla
- ✓ Botiquín que contendrá por lo menos los siguientes elementos:
  - Agua destilada o solución salina.
  - Apósitos de diferente tamaño.
  - Gasa.
  - Guantes quirúrgicos.
  - Isodine espuma.
  - Isodine solución.
  - Copitos –aplicadores.
  - Vendas elásticas.
  - Microporo.
  - Curas.
  - Baja lenguas.
  - Agua oxigenada.
  - Tijeras.
  - Jabón desinfectante.
  - Linterna y todos demás elementos que sean necesarios.

- ✓ Se instalarán recipientes de diferentes colores (Negra, Verde, Rojo y Blanco) para la separación y recolección de residuos sólidos ordinarios y reciclables. Los residuos sólidos generados no reciclables serán evacuados por la empresa prestadora del servicio de aseo del sector y los residuos especiales como grasas, lubricantes, y/o sustancias químicas que se manejen durante la ejecución del proyecto se deben depositar en un recipiente resistente al efecto corrosivo.

- ✓ Se dotará con extintores tipo A-B-C, estos contarán con su hoja de seguridad en donde se especificará las fechas de llenado y caducidad y botiquín para atención de primeros auxilios.

- ✓ Las sustancias químicas que se utilicen durante el proyecto y que pueden reaccionar juntas y expeler emanaciones peligrosas o causar incendios o explosiones, se

almacenaran separadamente una de otras, de acuerdo con la NTC 1692 y NFPA 704 y la Matriz Guía de Almacenamiento Químico.

- ✓ Las sustancias inflamables que se empleen durante la ejecución del proyecto, estarán en lugares aislados. Los trapos o elementos que se encuentren impregnados de aceite, grasa u otra sustancia que pueda entrar fácilmente en combustión, se recogerán y se depositaran en un recipiente debidamente identificado.

- ✓ En el área o lugar donde se encuentren sustancias inflamables no se permitirá la realización de trabajos que generen chispas, ni ningún dispositivo de fuego, ni se permitirá fumar.

- ✓ Los recipientes de sustancias peligrosas (toxicas, explosivas, inflamables, oxidantes, corrosivas) deberán llevar etiquetas para su identificación según la norma NTC 1692. Las respectivas hojas de seguridad permanecerán en lugares visibles y cerca al lugar de almacenamiento de la sustancia.

- ✓ Se contará con una línea telefónica para comunicación permanente entre el personal.

- ✓ El reglamento de Higiene y Seguridad Industrial; las políticas exigidas en el Programa de Gestión SST, cualquier información referente a horarios de trabajo y utilización adecuada de la vivienda donde funciona el campamento, se instalará en un lugar visible.

- ✓ El campamento dispondrá de áreas para cambio de ropa y estarán en perfectas condiciones de orden y aseo, para el personal de obra se dispondrán los baños de las instalaciones del campamento.

- ✓ Siempre se contará en el campamento con la lista de teléfonos de emergencia y manual de primeros auxilios en caso de cualquier emergencia.

Todos los sitios de trabajo deberán mantenerse en buenas condiciones de higiene y limpieza. Por ningún motivo se permitirá la acumulación de polvo, basuras y desperdicios.

Sitios de acopio temporal

Para los sitios de acopio se tomarán las siguientes medidas:

- ✓ El piso será protegido con tableado o con plástico en el que se irá apilando el material por utilizar.

- ✓ Todo material que genere emisiones de partículas será cubierto con lonas o plásticos.

- ✓ Cuando sea necesario acopiar materiales granulares se aislará la zona con malla fina sintética.
- ✓ Los patios de almacenamiento deberán estar distantes de cuerpos de agua.
- ✓ Las zonas de materiales permanecerán señalizados y acordonados.
- ✓ En caso de contingencias o accidentes, se ejecutarán las labores de limpieza por parte de la brigada de Aseo y Limpieza de forma inmediata y se toman las acciones correctivas que correspondan.
- ✓ En los sitios temporales de acopio para el almacenamiento de los diferentes materiales de construcción, estos deben estar debidamente señalizados y acordonados.
- ✓ Una vez concluidas las obras se hará la recuperación ambiental de las áreas ocupadas, dejando los sitios limpios, libre de basuras y escombros.

LUGAR DE APLICACION

- ✓ Área de ejecución de la obra

8.8. PROGRAMA USO Y ALMACENAMIENTO ADECUADO DE MATERIALES DE CONSTRUCCIÓN

OBJETIVO

- Dar un manejo adecuado de tipo preventivo, de los materiales de construcción desde su comercialización, disposición y transporte, para evitar: uso inadecuado de recursos naturales, ocupación del espacio público, impactos negativos al entorno y generación de conflictos con la comunidad.

TIPO DE MEDIDA

CONTROL	**X**	**PREVENCIÓN**	**X**	**MITIGACIÓN**		**CORRECCIÓN**	

IMPACTOS A MANEJAR

- Cambios en la calidad del aire
- Cambios en los niveles de ruido
- Afectación de la cobertura vegetal a permanecer
- Alteración de la calidad visual
- Cambio en el aporte de sedimentos a las redes de alcantarillado.

ACCIONES PARA EJECUTAR

✓ Todos los materiales de construcción provendrán de fuentes legalmente constituidas y con todos los requerimientos ambientales actualizados ante la entidad ambiental competente. Los proveedores se iran presentando en los momentos de desarrollo de cada una de las actividades.

En el evento de requerirse el cambio y/o la utilización de otro proveedor de materiales no reportado en el PIPMA, se dará aviso escrito a la Interventoría con cinco (5) días de anticipación, para que sea reportado a la entidad (ICA).

✓ El transporte de los materiales cumplirán con la Resolución 541 de 1994 emitida por el hoy Ministerio de Medio Ambiente y Desarrollo sostenible, por lo tanto los vehículos utilizados no deben ser llenados por encima de su capacidad, se vigilara que la carga transportada este siempre bien cubierta, con el fin de evitar la dispersión de la misma o emisiones fugitivas, La cobertura será de un material resistente y en buen estado, esta se sujetará a las paredes exteriores del contenedor para cubrir toda la carga, los vehículos utilizados contaran con los distintivos como numero de contrato y número de placa para que sean identificados dentro del área del proyecto.

✓ <u>Medidas de manejo para obra de concreto</u>

✓ Las mezclas de concreto se realizarán sobre bases metálicas para evitar la contaminación del suelo y del agua que va a los cuerpos de agua y redes de alcantarillado.

- ✓ Si ocurre algún derrame de mezcla de concreto, ésta se recogerá inmediatamente. La zona donde se presente el derrame se limpiará, evitando dejar cualquier tipo de residuo.

- ✓ No se emplearán formaletas de madera para fundición de obras de concreto, solo para formas especiales (terminaciones circulares etc.), en caso de ser necesario, se solicitará a la Interventoría el visto bueno para realizar la fundición:

- ✓ No se hará lavado de mezcladoras de concreto en los frentes de obra.

Medidas de manejo de agregados pétreos: arenas y triturados

- ✓ Se deben manejar en el frente de obra los materiales de construcción necesarios para una jornada laboral de un día, no podrá dejarse acopio de materiales en los frentes de obra.

- ✓ Está prohibido el acopio de materiales en vías alternas.

- ✓ En caso de fuerza mayor (lluvias, disturbios o por exigencias legales) el material de construcción que se encuentre en el frente de obra que no se utilice y que sea imposible de retirar, se acordonará (como mínimo con señalizadores tubulares y cinta de señalización) y protegerá de la acción de las lluvias o el viento cubriéndolos con lonas o plástico, delimitándolos con barreras de contención como ladrillos y alejados de los drenajes superficiales de agua.

- ✓ Los vehículos de transporte de materiales deben cumplir con lo establecido en la Resolución 541 de 1994 del MAVDT sobre cargue, descargue, transporte, almacenamiento y disposición de materiales, concretos y agregados sueltos de construcción.

- ✓ Los sitos de acopio temporal estarán ubicados en áreas cerradas aprobadas por la Interventoría; el área se señalizará y demarcará.

- ✓ Para disminuir los impactos generados durante las actividades de cargue y descargue de materiales se debe considerar las siguientes acciones.

- ✓ Acciones previas

- ✓ Fijar los sectores y horarios de cargue y descargue los cuales deben garantizar la menor interferencia posible con el tráfico de vehículos y transeúntes.

- ✓ Adecuar los sitios de cargue o descargue antes de realizar esta actividad y Comunicar al almacenista la llegada del material.

- ✓ Garantizar que la zona se encuentre libre de personas y elementos que pueden obstaculizar o generar riesgo de accidente.

- ✓ El personal que se encuentre dentro de la zona de cargue y descargue debe verificar que la entrada y salida de los vehículos esté libre de elementos o agentes que signifiquen un riesgo.

- ✓ Se debe demarcar, señalizar y aislar las áreas en donde se realizarán las labores de cargue y descargue de materiales en frentes de obra y campamentos.

- ✓ Para realizar las maniobras de entrada y salida, cargue y descargue se debe contar con el personal encargado de manejar la señalización (paleteros).

- ✓ Queda prohibido el uso de zonas verdes y de espacio interno en la base Aerea o áreas aledañas a la torre de control como áreas temporales para el cargue y descargue de estos materiales.

Acciones durante el cargue y descargue:

- ✓ Identificar el material su volumen y el sitio de descargue, el responsable de la aplicación del presente procedimiento debe identificar el material, registrar el volumen, indicar el sitio de descarga y dar la orden de descargue.

- ✓ Asignar el personal que va a realizar la función, el cual debe contar con los EPP para dicha actividad.

- ✓ Ubicación del vehículo en zona de descargue, durante esta acción se debe verificar antes del descargue que el vehículo se encuentre parqueado de forma alineada en la zona delimitada como área de descarga, el vehículo no debe sobrepasar su capacidad de carga dando cumplimiento a la resolución 541 de 2004. El vehículo se debe parquear en reversa y se debe verificar que el volcó esté libre de materiales que puedan dañar el material a ser cargado.

- ✓ Recepción de la carga en el sitio indicado, verificar que el material se descargue adecuadamente en el sitio delimitado.
- ✓ Durante las labores de descargue, se debe verificar el estado, la cantidad y calidad del material descargado y diligenciar el formato señalado en el numeral de seguimiento.

- ✓ Dar aviso al almacenista que el descargue ha terminado, para lo cual se debe verificar que todo el material haya sido descargado.
- ✓ Recepción de la carga en el vehículo, se debe verificar que el material se cargue adecuadamente sin generar riesgos de accidente, por parte del almacenista y el operador del vehículo se debe verificar que las cantidades de materiales sean las que hayan sido solicitadas.
- ✓ Adecuación del vehículo para el desplazamiento y transporte del material cargado, se debe considerar que la carga quede debidamente asegurada para evitar accidentes y que el vehículo cuente con la señalización adecuada cuando vaya a transportar cargas largas y anchas.
- ✓ Orden de despacho, el transportador recibe la orden de despacho y se dispone a realizar el desplazamiento hacia el sitio de descarga, se debe contar con la orden de despacho.
- ✓ Desplazamiento del vehículo de transporte, el desplazamiento hacia el lugar de descarga se debe hacer por las rutas autorizadas para tal fin.

LUGAR DE APLICACION

- ✓ **Área de Ejecución desde su punto inicial a su punto final**

8.9. PROGRAMA DE MANEJO DE MAQUINARIA, EQUIPOS Y VEHÍCULOS

OBJETIVO DEL PROYECTO

Implementar las medidas necesarias para el correcto manejo de equipos de construcción presentes en la zona de obra, con el fin de prevenir, mitigar y controlar cada uno de los impactos ambientales originados de las actividades de construcción.

TIPO DE MEDIDA

CONTROL		**PREVENCIÓN**		**MITIGACIÓN**	**X**	**COMPENSACIÓN**	

IMPACTOS A MANEJAR

- Modificación en las propiedades fisicoquímicas y/o biológicas del suelo.
- Generación de residuos sólidos industriales.
- Cambios en la calidad del aire.
- Cambios en los niveles de presión sonora.

ACCIONES A EJECUTAR

1. Manejo de equipos:

Los equipos, maquinaria y vehículos se ubicarán de manera temporal en cada frente de obra que se establezca conforme avanza la misma, para esto se deberán tener en cuenta las siguientes medidas:

- ✓ Los equipos, maquinaria y vehículos, solo podrán ser manejados por el personal capacitado y formado para ello.
- ✓ El transporte de materiales y equipos debe realizarse con precaución ante otros automotores y peatones.
- ✓ Los vehículos destinados al transporte de material fino serán tapados con el fin de evitar arrastre de partículas por acción del viento.
- ✓ Operar la maquinaria y equipo de tal manera que no cause mayor deterioro a los suelos, vegetación y cursos de agua.
- ✓ Se prohíbe realizar cualquier actividad de mantenimiento de los equipos sobre las vías o lugares no autorizados.
- ✓ Todo vehículo o equipo que funcione con sistemas de combustión debe realizar el mantenimiento necesario que garantice reacciones de combustión completa en su funcionamiento. Es decir, se debe demostrar la debida sincronización y en el caso de los vehículos, presentar el certificado de la revisión técnico-mecánica y de gases como también la licencia de conducción y tarjeta de propiedad.

- ✓ El mantenimiento debe realizarse sólo por personal autorizado y especializado en el tema, deberá realizarse lejos de lugares de acopio de combustible o sustancias inflamables.
- ✓ Para el traslado de equipos pesados, deberá utilizarse un camión con remolque tipo “Cama baja” o similar. El conductor debe portar las licencias, seguros, certificados de gases y demás documentos requeridos por las autoridades para el efecto. Dicha “cama baja” debe movilizarse con las luces prendidas, con escoltas adelante y atrás, cuando lleve carga extra dimensional. No movilizar equipos en reversa por más de 500 metros. En zonas urbanas contar con ruta previamente revisada.
- ✓ Los vehículos deberán cumplir con los equipos de prevención y seguridad reglamentados como lo son: Un gato, una cruceta, dos señales de carretera, un botiquín de primeros auxilios, un extintor, dos tacos, una caja de herramienta básica, llanta de repuesto y linterna.
- ✓ Todos los operarios deberán contar con el certificado de manejo de maquinaria pesada.
- ✓ Para el traslado de maquinaria y equipo, se deberá tramitar un permiso interno (contratista y transportador), el cual garantizará el cumplimiento de la implementación de las medidas de movilización equipos y maquinaria pesada.
- ✓ La maquinaria que no se encuentre en operación debe apagarse con el fin de evitar la emisión de gases y partículas.
- ✓ En los vehículos diésel el tubo de escape debe estar a una altura mínima de 3 m.

2. Abastecimiento de combustible

El abastecimiento de combustible deberá hacerse preferiblemente en lugares autorizados, cuando se requiera hacer almacenamiento y/o abastecimiento de combustible en los frentes de obra se deberán seguir las siguientes acciones:

- ✓ El almacenamiento de combustible se debe hacer en zonas con buena ventilación preferiblemente con techos altos y en áreas usadas específicamente para este fin.
- ✓ No deberá almacenarse cerca o en sitios de almacenamiento de productos incompatibles con combustibles y lubricantes y se debe prohibir fumar, el uso de cámaras fotográficas y equipos de telefonía móvil.
- ✓ Deberá estar totalmente señalizado de acuerdo con la norma NFPA 30 o aquella que aplique –almacenamiento de sólidos, líquidos y gases inflamables–, y con el código de colores de seguridad.
- ✓ Se deberá mantener orden y aseo total en el área.
- ✓ Se deberá contar con las hojas de seguridad de los productos manejados y deberán estar a la mano del personal que lo manipula.

En los posibles casos que deba realizarse el abastecimiento se deberá poner sobre el suelo un material que no permita la contaminación de este en caso de derrame, y se deberá contar con un

material absorbente y disponerse adecuadamente de acuerdo con la Ficha de residuos sólidos domésticos, industriales y peligrosos.
Es importante tener en cuenta lo siguiente:

Dentro de las actividades puede llegar a ejecutarse la manipulación de equipos para cortes de material prefabricado, por tal motivo es de considerar las condiciones generales que se deben tener en cuenta para tal caso:

- ✓ Para realizar todo trabajo de corte de prefabricado se debe tener experiencia como cortador y el perfil laboral para el cargo.
- ✓ Se deben contar con condiciones locativas de trabajo en la cual se cuente con cerramiento alto con ventilación e iluminación, recubierto en poli sombra verde y azul.
- ✓ Contar con instalaciones eléctricas cerca de cajas de tacos principales donde quede al alcance del operario para que en caso de emergencia pueda des energizar el equipo, dicha caja debe colocarse evitando el contacto de agua durante el proceso de corte.
- ✓ La maquinaria estará en condiciones óptimas de trabajo, sistemas de gradación de altura de trabajo de acuerdo con el tipo de material y material de corte.
- ✓ Hacer el uso correspondiente de los equipos de protección personal (guantes de caucho, manga larga, overol, botas de caucho caña alta, gorro o pasamontañas, tapa bocas, tapa oídos)
- ✓ Mantener toda la zona libre de material residual de ladrillo, adoquín, bloque o cualquier material prefabricado, de manera que no sea arrastrado por escorrentía generando obstrucción en el sistema de alcantarillado.

(Lo anterior en caso de que se requiera realizar actividad de esta manera)

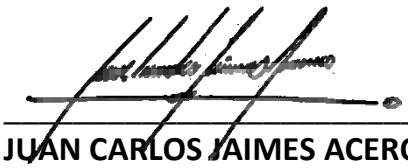
REFERENCIA: CONTRATO N° GGC-089- 2024 – "ADECUACIÓN DE LA OFICINA LOCAL ICA MAGANGUÉ Y MANTENIMIENTO DE LA OFICINA LOCAL ICA EN CARMEN DE BOLIVAR, DEPARTAMENTO DE BOLÍVAR"

ASUNTO: SOLICITUD DE APLICACIÓN DE MEDIDAS PREVENTIVAS

Cordial saludo,



Por medio de la presente me permito solicitar la implementación de las medidas necesarias para garantizar el correcto desarrollo de las actividades en obra que impliquen actividades criticas como lo es el trabajo en alturas y el manejo de material peligroso como el asbesto.

Lo anterior se manifiesta con el fin de evitar la ejecución de la actividad de desmonte de cubierta existente sin antes tener en cuenta lo siguiente:

- Teniendo en cuenta que es una actividad en alturas, se debe remitir el procedimiento de trabajo para dicha actividad, es decir, se debe documentar el paso a paso del desarrollo en alturas para esta labor en particular, describiendo los métodos de ascenso, los elementos de protección contra caídas a utilizar y certificación de los mismos, además de sebe incluir y/o especificar, quien será el personal que ejecute dicha actividad
- Además de lo anterior, cabe mencionar que el trabajo en alturas debe estar supervisado por un coordinador de alturas desde el inicio hasta su final, el cual deberá diligenciar los permisos de trabajo y activar el plan de rescate si es el caso
- Por otra parte, teniendo en cuenta que la actividad requiere un manejo de asbesto-cemento el cual es un mineral fibroso altamente nocivo para la salud, se solicita implementar los elementos de protección personal que garanticen la

seguridad del personal encargado de llevar a cabo esta actividad. Estos elementos deben proteger al trabajador del contacto directo con el material, evitando afectaciones de la salud.

Así lo expuesto, es importante mencionar que las actividades anteriormente descritas deben realizarse bajo supervisión continua y se sugiere ejecutarse dentro de los horarios establecidos sin exceder las horas semanales reglamentadas.

Asunto: Entrega observaciones a las hojas de vida en atención al oficio INT-ICA-BOL-008

Respetado arquitecto Juan Carlos.

Por medio del presente envío las observaciones y subsanaciones de las hojas de vida del personal mínimo requerido de la siguiente manera:

1. En cuanto al ingeniero electricista se adjuntan los soportes solicitados (certificados laborales, cedula, diploma y tarjeta profesional.)
2. En cuanto al SISOMA, una vez revisada la dedicación y teniendo en cuenta que es del 40% por cada uno de los frentes, se propone un profesional en salud ocupacional con las condiciones de experiencia solicitadas.
3. En cuanto a la residente 1 (MAIRA ANDREA ROMANI SIMANCA) se envía la hoja de vida básica, los soportes de grado y las dos (2) certificaciones de haber laborado en *"(…) dos (2) contratos de obra donde haya actuado como RESIDENTE DE OBRAS en obras civiles relacionadas con: construcción o adecuación o mejoramiento o ampliación o reparación o mantenimiento de edificaciones no residenciales. (…)"*
4. En cuanto a la residente 2 (KAREN ANDREA ARIAS GUERRA) se envía la vigencia de la matricula profesional y la certificación faltante para completar los *"(…) dos (2) contratos de obra donde haya actuado como RESIDENTE DE OBRAS en obras civiles relacionadas con: construcción o adecuación o mejoramiento o ampliación o reparación o mantenimiento de edificaciones no residenciales. (…)"*

De antemano agradecemos la atención prestada

ASUNTO: Solicitud acta de inicio y reiteración listado de personal de obra

Cordial saludo arquitecto,

Como es de su conocimiento, el 01 de noviembre se firmó el acta de inicio del contrato GGC-104-2024 entre la interventoría y la entidad, con el fin de darle inicio al contrato. Además, se recibió el listado del personal de la interventoría con sus afiliaciones, personal que serán autorizados para ingresar a las sedes.

Por otro lado, El mismo día, la entidad compartió el acta de inicio del contrato GGC-089-2024 para su revisión y aprobación entre las partes, documento que no se ha recibido aún. Solicito enviar el documento debidamente firmado para proceder con la publicación en el secop, y así poder iniciar el contrato de obra.

Adicionalmente, reitero la importancia de enviar el listado del personal de obra con las respectivas afiliaciones al sistema de seguridad social y riesgos laborales, con el fin de proceder con la autorización de ingresos a las sedes y darle inicio a la ejecución física del proyecto.

Dada la premura con la que se requiere el inicio de la obra, se otorga para efectos de aportar los documentos pendientes, un plazo improrrogable al 05 de noviembre.

Cordialmente,

KEIBER ALEXANDER COLORADO LANDAZURI
Coordinador Grupo de Gestión de Infraestructura Física y Mantenimiento

Referencia: CONTRATO GGC-089-2024 "ADECUACIÓN DE LA OFICINA LOCAL ICA MAGANGUÉ Y MANTENIMIENTO DE LA OFICINA LOCAL ICA EN CARMEN DE BOLIVAR, DEPARTAMENTO DE BOLÍVAR"

Asunto: Entrega del diagnóstico de la estructura metálica y cubierta existente de los dos frentes de trabajo, Carmen de Bolívar y Magangué.

Respetada arquitecta Liliana Quiroga.

Por medio del presente envío el diagnostico de la cubierta, con los siguientes elementos de diseño:

1. Modelación, análisis y obtención de las relaciones demanda capacidad de las cerchas seleccionadas. (Carmen de Bolívar y Magangué)
2. Elaboración de informe de resultados y diagnóstico
3. Elaboración de detalle de muro de cerramiento para la sede de Magangué-Bolívar.
4. Concepto del cálculo de cargas y dimensionamiento de los elementos del cerramiento.

Teniendo en cuenta lo anterior se concluye que no se requiere realizar el cambio de la estructura metálica, por lo tanto, se recomienda un mantenimiento, es decir, lijado, limpieza, anticorrosivo y pintura de la estructura metálica existente.

Cordialmente,

GILDARDO CASTILLO SÁNCHEZ

ASUNTO: Revisión y aprobación residente de interventoría

Cordial saludo Arquitecto,

El día 18 de noviembre, la entidad recibió vía correo electrónico la renuncia del residente de interventoría Alejandro Frasser Nuñez, encargado de la residencia de la sede Magangué. En dicho documento expresa que por motivos personales el profesional solo laboraría hasta el 18 de noviembre de 2024 para la empresa Equilátero Arquitectura e Ingeniera S.A.S.

Simultáneamente, compartieron los siguientes documentos de la Arquitecta Jennifer Lucia Torregrosa Hernández:

1. Formato Experiencia del profesional

2. Hoja de vida

3. Cédula de ciudadanía

4. Tarjeta profesional

5. Vigencia y antecedentes de matrícula

6. Diploma de arquitecta

7. Carta de disponibilidad y compromiso

8. Certificados de experiencia como residente de interventoría

9. Certificados de los contratos de interventoría

La entidad procedió a revisar la documentación relacionada verificando la experiencia e idoneidad de la profesional según lo exigido en el pliego de condiciones, y logró concluir que la profesional

cumple con todos los requisitos exigidos, motivo por el cual se aprueba su participación como residente de interventoría para la sede Magangué, a partir del 19 de noviembre de 2024.

Adicionalmente, para permitir el ingreso de la profesional a la sede, solicito compartir las afiliaciones al sistema de seguridad social y parafiscales, el cual debe tener como empleador la empresa Equilátero Arquitectura e Ingeniera S.A.S.

Cordialmente,

VICTOR CAMILO CLAVIJO MORENO

ASUNTO: Verificación cumplimiento de obligaciones y solicitud informe estado contrato

Cordial saludo,

Realizando una revisión de los documentos entregados por parte de la interventoría sobre los contratos GGC-104-2024 (interventoría) y GGC-089-2024 (obra) de las adecuaciones y mantenimiento de las oficinas locales ICA en Carmen de Bolívar y Magangué, Bolívar, la entidad encontró que a la fecha no se les ha dado cumplimiento a todas las obligaciones contractuales.

Se reitera la importancia de cumplir con los plazos establecidos y obligaciones plasmadas dentro del pliego de condiciones, contrato y anexo técnico, la entidad procedió a evaluar el cumplimiento de cada una de las obligaciones de ambos contratos, y determinó que, a hoy 19 de noviembre, 18 días después del inicio del contrato, no se ha logrado cumplir con todas las obligaciones.

CONTRATO GGC-089-2024

OBLIGACIÓN	OBSERVACIONES
Presentar al interventor del contrato dentro en un término máximo de cinco (5) días hábiles, contados a partir de la suscripción del contrato y previo a la suscripción del acta de inicio, el Análisis de Precios Unitarios (APU), en el cual se deberá discriminar como mínimo la cantidad y costo de materiales con su respectivo desperdicio, herramientas, equipos, mano de obra y transporte de materiales en general, requeridos para el desarrollo de cada una de las actividades que conforman el cuadro de presupuesto, los cuales deben cumplir con lo siguiente: i). Materiales y desperdicio: Los necesarios (especificar); ii). Herramientas y equipo: Los necesarios (especificar); iii). Mano de Obra: Cuadrilla o cuadrillas requeridas. Si el proponente omite uno o más insumos, equipo o herramienta en los análisis de precios unitarios, o no incluye los costos de movilización y transporte de materiales o equipo a utilizar, cuando así se requiera,	

estos costos deberán ser asumidos en obra y así cumplir con las especificaciones técnicas. Adicionalmente es necesario elaborar los siguientes cuadros complementarios: Cuadro de cuadrillas: El cuadro de cuadrillas se realizará según tipo (albañilería, carpintería en madera, pinturas, etc.), señalando su conformación (oficiales, ayudantes, etc.). Se indicará el valor del salario, éste y sus componentes deben ajustarse a lo establecido por la ley, el resultado deberá expresarse en jornal (la remuneración de un día de trabajo) y será trasladado a la casilla de mano de obra en los APU. Las cuadrillas tipo a utilizar deben estar de acuerdo con la actividad a desarrollar para cada actividad. Solo se aceptará una cuadrilla por especialidad en cada APU, es decir no pueden existir 2 o más cuadrillas iguales en un mismo APU, pero si es posible que un APU necesite el empleo de varias cuadrillas de distinto género. EL VALOR TOTAL DE CADA UNO DE LOS ANÁLISIS DE PRECIOS UNITARIOS (APU) DEBERÁ SER REDONDEADO A MÁXIMO DOS DECIMALES, ESTE VALOR DEBERÁ SER IGUAL AL PRESENTADO EN EL CUADRO DE PRESUPUESTO ADJUNTADO A LA PROPUESTA	- El contratista cumplió con la entrega de los APU - Se le dio plazo adicional al contratista para entregar el cuadro de cuadrillas, una vez se definiera la actividad de la cubierta, a la fecha no se ha entregado. Se solicita entregar el cuadro de cuadrillas de acuerdo a los APU aprobados por la interventoría.
Presentar cronograma detallado de obra a realizar por capítulos, a partir de los planos, documentos técnicos, las condiciones del sitio, utilizando una aplicación software tipo Project o similar en un diagrama de barra, discriminando en semanas, con el plazo máximo de ejecución establecido por la entidad y dentro de los parámetros propuestos; deberá incluir: la secuencia y duración de cada una de las actividades, indicadas en el formato de cantidades de la propuesta económica, ruta crítica, programación de los trabajos que incluya todas las actividades (capítulos, subcapítulos y los ítems en su totalidad) y programa detallado de personal por actividades. El cronograma de obra se entregará al interventor dentro en un término máximo de cinco (5) días hábiles, contados a partir de la suscripción del contrato previa suscripción del acta de inicio, para que posteriormente sea entregado y aprobado por parte de la interventoría.	- Este documento fue entregado por el contratista de obra y avalado por la interventoría. Sin embargo, se evidencia una falencia en el inicio, dado que la fecha del cronograma esta a partir del 01 de noviembre, y el acta de inicio del contrato es del 02 de noviembre, se solicita ajustar.
Destinar a la ejecución del contrato, en un porcentaje mínimo del 5%, sin perjuicio de que el contratista incorpore un porcentaje superior al definido por la Entidad, la provisión de bienes o servicios por parte de alguno o algunos de los siguientes sujetos de especial protección constitucional: población en pobreza extrema, desplazados por la violencia, personas en proceso de reintegración o reincorporación, víctimas de conflicto armado interno, mujeres cabeza de hogar, adultos mayores, personas en condición de discapacidad, así como la población de las comunidades indígena, negra, afrocolombiana, raizal, palanquera, Rrom o gitana, entre otros sujetos identificados por la Ley o la	

jurisprudencia de esta manera. El porcentaje de sujetos mencionados incorporados a la ejecución del contrato deberá mantenerse durante toda su vigencia en el porcentaje mínimo establecido en este numeral, so pena del incumplimiento contractual. El Supervisor hará el seguimiento y verificará que las personas vinculadas al inicio y durante la ejecución del contrato pertenezcan a los grupos poblacionales enunciados anteriormente. Para estos efectos, el contratista presentará la documentación respectiva que acredite la condición de los sujetos mencionados y la forma en la que participarán durante la ejecución del contrato. El cumplimiento de esta obligación deberá probarse ante al supervisor y/o interventor dentro de los tres (3) días hábiles siguientes contados a partir de la firma del acta de inicio. Para la acreditación de la condición de mujer cabeza de familia, personas en condición de discapacidad, adultos mayores, población de las comunidades indígena, negra, afrocolombiana, raizal, palanquera, Rrom o gitana, personas en proceso de reintegración o reincorporación, se aplicará en lo pertinente lo dispuesto en el artículo 2.2.1.2.4.2.17 del Decreto 1082 de 2015 o la norma que lo modifique, complemente o sustituya. Por su parte, la condición de población en pobreza extrema se constatará en las bases de datos del Sistema de Identificación de Potenciales Beneficiarios de Programas Sociales (Sisbén IV) y la condición de víctima de conflicto armado y de desplazados por la violencia deberá demostrarse con el certificado de inclusión en el Registro Único de Víctimas – RUV, en los términos del Decreto 1084 de 2015 o la norma que lo modifique, complemente o sustituya. La condición de los sujetos de especial protección constitucional que no se encuentre definida en esta cláusula deberá ser acreditada por el contratista de conformidad con lo determinado por la ley y la jurisprudencia en ausencia de norma aplicable.	- Esta actividad tenía como fecha de cumplimiento el 06 de noviembre, y 10 días después aún no se le ha dado cumplimiento. Se solicita demostrar el cumplimiento de esta obligación.
Presentar informe de cubierta donde se muestre el levantamiento actual de la estructura y se identifique si es necesario o no realizar un reforzamiento estructural. Este informe se deberá entregar al interventor dentro en un término máximo de cinco (5) días hábiles contados a partir de la suscripción del acta de inicio. El informe deberá cumplir con los requisitos exigidos en el ANEXO No. 01 – ANEXO TÉCNICO.	- La visita del estructural se realizó el 08 y 09 de noviembre, por lo que el informe de cubierta detallado tenía fecha máxima de entrega el 16 de noviembre, documento que aún no se ha entregado. - Cerramiento: no compartió memorias de cálculo, en la fecha establecida. - Cubierta: en comité se dio plazo máximo de entregar todo a la interventoría el 18 de noviembre y a la fecha no se ha entregado.
Presentar al interventor del contrato el listado del personal que laborará en el proyecto, la cual deberá contener: Nombre, cedula de ciudadanía, cargo; también debe aportar	- El contratista de obra ha cumplido parcialmente con esta actividad. Dado que se evidencia que a hoy 19 de noviembre, todavía no

las certificaciones de afiliación y de pago mes a mes de la seguridad social y durante el periodo del contrato (Pensión, EPS y ARL). Toda persona que labore dentro del proyecto debe estar vinculada a la empresa	cumple con los requisitos el equipo eléctrico. - Se solicita a la interventoría enviar el listado de todo el personal autorizado de obra con las afiliaciones.
Presentar al interventor informes quincenales del avance de obra, mensuales e informe final de obra en medio magnético. La información mínima que debe contener cada informe se encuentra especificado en el ANEXO No. 01 – ANEXO TÉCNICO	- El informe quincenal con fecha de corte al 16 de noviembre aún no se ha recibido por la entidad, se solicita enviarlo inmediatamente con la aprobación de la interventoría.
El Contratista se compromete a realizar una presentación en formato digital semanal ante los comités pertinentes, detallando el progreso de la obra en los aspectos financieros, administrativos, de seguridad y salud ocupacional (SST), así como en los temas ambientales. Esta presentación deberá incluir información fotográfica actualizada y detallada sobre el estado de avance en cada una de estas áreas, proporcionando a los comités una visión integral del desarrollo del proyecto	- El contratista de obra no cumplió con esta obligación en el primer comité, exigirle el cumplimiento para los comités que siguen.
Entregar al interventor las memorias de cálculo, los planos de diseño y los planos récord de obra el cual deberá ser adjunto al informe final y necesarios para la suscripción del acta de recibo	- Si bien se menciona que se deben entregar adjunto al informe final, a la fecha no ha cumplido con la entrega de los diseños estructurales: Cerramiento: no compartió memorias de cálculo. Cubierta: en comité se dio plazo máximo de entregar todo a la interventoría el 18 de noviembre y a la fecha no se ha entregado.
Efectuar la socialización con las partes interesadas del entorno del contrato (numeral 5.4 del anexo técnico).	- El contratista tenía la obligación de realizar una socialización del proyecto con las partes interesadas del entorno del contrato. A la fecha, no se ha compartido el acta de socialización y el registro fotográfico. Se solicita enviar dicha información.
Documentos de salud ocupacional: Carta de compromiso de cumplimiento como contratista y matriz de cumplimiento de requisitos en seguridad y salud en el trabajo (numeral 6.9 del anexo técnico).	- Estos documentos contaban con máximo 5 días hábiles y a la fecha no se han recibido. Se solicita enviarlos inmediatamente con la aprobación de la interventoría.
Plan detallado de trabajo (numeral 4.1 del Anexo Técnico)	- La entidad no ha recibido el plan detallado de trabajo exigido en el anexo técnico, numeral 4.1, solicitamos enviarlo de forma inmediata.

Adicionalmente, dentro del contrato se encuentran algunas obligaciones que, si bien son de cumplimiento durante toda la ejecución, la entidad solicita entregar avances previos:

OBLIGACIÓN	OBSERVACIONES
Proveer suficiente personal, herramienta, equipo y trabajar con los turnos necesarios para que el trabajo se realice de acuerdo con el programa de obra aprobado, cuando el contratista se atrase con respecto al programa de obra, el interventor le puede exigir por escrito un plan de contingencia en el que aumente el número de turnos y/o la	- Se evidencia atrasos en el cronograma de obra inicial, se le sugiere al interventor exigirle un plan de contingencia.

jornada de trabajo, sin costo adicional para el ICA.	
Llevar una memoria diaria o bitácora de obra de todos los acontecimientos, sucesos y decisiones tomadas en la ejecución de la obra, registrarse la visita de funcionarios que tengan que ver con el proyecto, y demás acontecimientos, debe permitir la comprensión general de la obra y desarrollo de las actividades de acuerdo con el cronograma de ejecución aprobado. Debe firmarse por el residente de obra y la interventoría del contrato. Esta bitácora deberá ser entregada previa suscripción del acta de recibo.	- Si bien esta actividad se le da cumplimiento al finalizar el contrato, solicito enviar cada semana con el informe semanal de interventoría la copia de la bitácora debidamente firmada por ambas partes.
Realizar y mantener actualizado el balance de obra, el cual debe contener las actividades, cantidades y valores de las condiciones de obra contratadas, condiciones actualizadas, mayores y menores cantidades de obra y cantidades finales ejecutadas; documento que tiene por objeto el control de los recursos contractuales. Éste deberá ser presentado a la interventoría con cada corte de obra o cuando esta lo requiera	- Presentar el balance del contrato en cada comité semanal.

CONTRATO GGC-184-2024

OBLIGACIÓN	OBSERVACIONES
Conocer las obligaciones a cargo del Contratista de obra, del Interventor y de la Entidad Contratante; los riesgos que asume cada parte dentro del contrato y verificar que se cumplan los objetivos generales y específicos de los mismos	- Si bien la interventoría esta cumpliendo con sus obligaciones en la obra, no se evidencia que se le haya exigido al contratista la entrega de toda la documentación faltante, alguna de esta tenía fecha máxima el 08 de noviembre y otra el 16 de noviembre, y ninguna se ha recibido por parte de la entidad.
Conocer a cabalidad todos los documentos referentes al proceso del contratista de obra, los estudios previos, el anexo 1 - anexo técnico, el pliego de condiciones, la propuesta, y demás documentos que hacen parte del proceso de selección, para realizar el seguimiento, vigilancia y control de forma eficiente	Solicito realizar una revisión a todos los documentos precontractuales y contractuales del contrato GGC-089-2024, con el fin de conocer cuales obligaciones a la fecha aún no se le ha exigido su cumplimiento.
Exigir al contratista la documentación requerida una vez se adjudique el contrato para su respectiva revisión y aprobación: documentación del equipo de trabajo, informe diagnóstico, análisis de precios unitarios, cronograma de trabajo, Plan de Manejo Ambiental, y seguridad y salud en el trabajo, cuadro de cuadrillas, informe de cubierta detallado, y plan detallado de trabajo	- Si bien enviaron una solicitud al inicio del contrato, no se evidencia reiteración sobre la entrega del cuadro de cuadrillas y el plan detallado de trabajo. - Estos documentos debieron entregarse a más tardar el 8 de noviembre. Se sugiere solicitar nuevamente, o en caso de haberse entregado, solicito enviarlo a la entidad con su aprobación.
Realizar la aprobación y velar por el cumplimiento del Plan de Manejo Ambiental de Obra y el Sistema de Gestión, Seguridad y Salud en el Trabajo (SG SST), elaborado por el contratista de obra	- La entidad el día de hoy compartió el plan SG-SST aprobado por ustedes el 01 de noviembre, esto indicia que a la fecha no se le ha realizado seguimiento. Solicito velar por el cumplimiento de forma inmediata.
Ante la evidencia de un posible incumplimiento, el interventor, informará de inmediato o a más tardar al día hábil siguiente de la ocurrencia, a través de informe técnico detallado, al	- La interventoría no ha enviado ningún informe de evidencia de posible incumplimiento informando a la entidad sobre los retrasos administrativos y los físicos de la obra.

ordenador del gasto, para que inicie las acciones correspondientes, contando para ello con el apoyo de quien cumple con el rol jurídico de la empresa y de la dependencia de la entidad	- Se solicita enviar informe donde se evidencie todos los incumplimientos que ha tenido el contratista de obra en sus obligaciones administrativas, además de informar sobre los retrasos físicos de la obra.
Efectuar la verificación del aporte mínimo dentro del rango de cinco por ciento (5 %) al diez por ciento (10%) que el Contratista incorpore en la provisión de bienes o servicios por parte de alguno o algunos de los siguientes sujetos de especial protección constitucional: población en pobreza extrema, desplazados por la violencia, personas en proceso de reintegración o reincorporación, víctimas de conflicto armado interno, mujeres cabeza de hogar, adultos mayores, personas en condición de discapacidad, así como la población de las comunidades indígena, negra, afrocolombiana, raizal, palanquera, Rrom o gitana, entre otros sujetos identificados por la Ley o la jurisprudencia de esta manera	- No se ha compartido con la entidad la verificación y/o afiliaciones del personal de especial protección exigido al contratista de obra. Se solicita enviar el cumplimiento de esta obligación. - En caso de que el contratista no haya cumplido, no se evidencia la solicitud de cumplimiento de esta actividad.
Analizar el avance contractual de los trabajos, con el fin de prever, con la suficiente anticipación, eventuales incumplimientos de plazos y sub-plazos, que hagan necesaria la toma de medidas con el contratista para prevenirlos, o para efectos de advertir y sugerir al Instituto Colombiano Agropecuario - ICA la imposición de las sanciones contractuales correspondientes.	- Si bien en los informes semanales se evidencia que hay un atraso en la ejecución de la obra y la entidad conoce que la mayoría se debe al tema estructural, no se evidencia solicitudes o informes donde demuestre el incumplimiento de las actividades administrativas respecto al informe de la cubierta detallada y a los diseños. - Se solicita enviar informe a la entidad donde se evidencie los retrasos que se tienen y donde se emita concepto si ve viable la implementación de un plan de contingencia o la posibilidad de un posible incumplimiento.
Requerir a los contratistas cuando incumplan obligaciones contractuales, informar de ello por escrito al Instituto Colombiano Agropecuario - ICA y, de resultar pertinente, avisar a la aseguradora.	- No se evidencia requerimiento al contratista de obra, ni informe a la entidad.

Teniendo en cuenta lo anterior, la entidad solicita de forma urgente el cumplimiento de todas las obligaciones contractuales mencionadas con un plazo máximo de 3 días. Los documentos que debe entregar el contratista de obra deberán estar avalados por la interventoría.

Adicionalmente, la entidad solicita a la interventoría realizar un informe detallado de los avances del contrato GGC-089-2024, donde se evidencia el cumplimiento o la falta de cumplimiento de las obligaciones contractuales tanto administrativas como técnicas, para ello recomiendo realizar la cronología del cumplimiento de las obligaciones. Además, en el informe se deberá emitir concepto, donde se recomiende acciones pertinentes a tomar para el cumplimiento de obligaciones faltantes, posibilidad de implementar un plan de contingencia o la posibilidad de adelantar un incumplimiento.

ASUNTO: Respuesta a radicado No. INT-ICA-2024-020 donde se solicita autorización para el desmonte de aires acondicionados y gabinete de internet en la sede Carmen de Bolívar.

Cordial saludo Arquitecto,

frente a su solicitud, la entidad informa que no se puede dar autorización para el retiro de los aparatos mencionados, debido a que no cumple con los requisitos exigidos en el pliego de condiciones.

Para ello se solicita a la Interventoría que dicha solicitud venga acompañada con su concepto técnico y visto bueno, teniendo presente la obligación no. 30 del pliego de condiciones del contrato GGC-089-2024, "*Cada vez que se realice alguna modificación a las cantidades de las actividades iniciales o se deba ejecutar una obra no prevista, se deberá diligenciar el formato de la entidad y ser aprobado tanto por el interventor como por la entidad*". Adicionalmente, se requiere anexar a dicha solicitud el balance de mayores y menores cantidades sin afectar el alcance del contrato y valor total del mismo.

Cordialmente,

VICTOR CAMILO CLAVIJO MORENO

EQUILATERO ARQUITECTURA E INGENIERÍA S.A.S
Bogotá D.C.

Referencia: CONTRATO GGC-089-2024 "ADECUACIÓN DE LA OFICINA LOCAL ICA MAGANGUÉ Y MANTENIMIENTO DE LA OFICINA LOCAL ICA EN CARMEN DE BOLIVAR, DEPARTAMENTO DE BOLÍVAR"

Asunto: Respuesta al oficio INT-ICA-2024-031 a lo referente con el presunto incumplimiento del contrato de referencia

Respetada arquitecta Liliana Quiroga.

Por medio del presente doy respuesta puntual a cada uno de los requerimientos solicitados en el oficio del asunto:

- No se ha remitido el cuadro de cuadrillas que debe cumplir con "realizará según tipo (albañilería, carpintería en madera, pinturas, etc.), señalando su conformación (oficiales, ayudantes, etc.). Se indicará el valor del salario, éste y sus componentes deben ajustarse a lo establecido por la ley, el resultado deberá expresarse en jornal (la remuneración de un día de trabajo) y será trasladado a la casilla de mano de obra en los APU. Las cuadrillas tipo a utilizar deben estar de acuerdo con la actividad a desarrollar para cada actividad. Solo se aceptará una cuadrilla por especialidad en cada APU, es decir no pueden existir 2 o más cuadrillas iguales en un mismo APU, pero si es posible que un APU necesite el empleo de varias cuadrillas de distinto género."

  RESPUESTA: El contratista si entrego el cuadro de cuadrillas que estaba destinado a la elaboración de los análisis de precios unitarios contractuales del contrato de referencia. Esto en el archivo denominado "FORMULARIO No. 01 - FORMULARIO OFERTA ECONOMICA" lo anteriormente requerido se encuentra descrito en el numeral "4.1. ACTIVIDADES A DESARROLLAR PREVIA EJECUCIÓN DE LA OBRA (…) Análisis de precios unitarios" lo cual efectivamente, era para el desarrollo de los APU´s anteriormente mencionados, de los cuales a la fecha no se recibieron observaciones y se recibieron a satisfacción por la presente interventoría. El

documento fue entregado desde el 23 de octubre del año 2024. Igualmente, con el presente oficio se reenvía el mismo y quedamos atentos a cualquier observación.

- La programación fue entregada por el contratista de obra y avalado por la interventoría. Sin embargo, se evidencia que el inicio del cronograma está a partir del 01 de noviembre, y el acta de inicio del contrato es del 02 de noviembre, se solicita ajustar.

  RESPUESTA: Efectivamente y tal como lo manifiesta la presente interventoría la programación fue entregada de acuerdo a lo requerido en el anexo técnico el día 30 de octubre de 2024, previo al inicio de obra. En consecuencia, en ese momento se tenia previsto tener el inicio de obra para el 1 de noviembre de 2024, por unas observaciones presentadas al personal mínimo requerido del contratista, la firma del acta de inicio se retraso un día, por lo anterior se presenta junto a este documento la actualización de la programación a partir del 2 de noviembre de 2024.

- No se han remitido los documentos que permitan verificar que se destinó para la ejecución del contrato, en un porcentaje mínimo del 5%, sin perjuicio de que el contratista incorpore un porcentaje superior al definido por la Entidad, la provisión de bienes o servicios por parte de alguno o algunos de los siguientes sujetos de especial protección constitucional: población en pobreza extrema, desplazados por la violencia, personas en proceso de reintegración o reincorporación, víctimas de conflicto armado interno, mujeres cabeza de hogar, adultos mayores, personas en condición de discapacidad, así como la población de las comunidades indígena, negra, afrocolombiana, raizal, palanquera, Rrom o gitana, entre otros sujetos identificados por la Ley o la jurisprudencia de esta manera. El porcentaje de sujetos mencionados incorporados a la ejecución del contrato deberá mantenerse durante toda

  RESPUESTA: Es importante aclarar que lo requerido es diferente al personal en condición de discapacidad presentado junto a la oferta, que lleva más de un año vinculado a la empresa GESTION RURAL Y URBANA SAS, el cual es un personal operativo quien hace parte del grupo de trabajo de GESTION RURAL Y URBANA SAS, y participa en las actividades del proyecto de referencia en la parte administrativa. Este personal se podrá verificar en el primer informe mensual cuando se presente la planilla de pago de GESTION RURAL Y URBANA SAS y se logre verificar que dicho personal se encuentra vigente. Ahora bien, en cuanto al requerimiento especifico de parte de ustedes, dicha verificación se pudo hacer desde la entrega de la documentación del personal operativo de obra, ya que, el trabajador **Aquilio Olea Martinez** se encuentra dentro del grupo poblacional de adulto mayor, y teniendo en cuenta el control de personal que manejan los

profesionales del sistema HSEQ, a la fecha no hay más de veinte (20) personas vinculadas directamente con la ejecución de la obra. De ser el caso de sobrepasar el número de veinte (20) personas se remitirá la información del personal operativo, mencionado anteriormente, que desarrolla actividades administrativas.

- No se han remitido al interventor informes quincenales del avance de obra, mensuales e informe final de obra en medio magnético. La información mínima que debe contener cada informe se encuentra especificado en el ANEXO No. 01 – ANEXO TÉCNICO.

  RESPUESTA: En cuanto al informe quincenal con fecha de corte del 19 de noviembre de 2024, se adjunta con el presente oficio.

- No se han remitido los documentos que permitan verificar que se realizó la socialización con las partes interesadas del entorno del contrato (numeral 5.4 del anexo técnico).

  RESPUESTA: En cuanto a lo solicitado en el anexo técnico en cuanto al numeral **"5.4 GESTIÓN SOCIAL"** Se aclara que desde la primera reunión con el ICA se mencionó que cualquier trámite o requerimiento debía ser directamente con los supervisores del contrato, de hecho se menciono la reunión preliminar que se tuvo con los encargados de las sedes a intervenir para la realización de las obras, adicional a esto, se dejo claro que no se podían atender los requerimientos por parte de los encargados de las sedes sin previa autorización de la interventoría del contrato. En este sentido, y teniendo en cuenta que no hay población colindante a la ejecución de la obra, solicitamos respetuosamente a la interventoría, aclararnos ante que partes interesadas en el proyecto, se debe hacer dicha socialización y procederemos a hacerla.

- No se han remitido los documentos de salud ocupacional: Carta de compromiso de cumplimiento como contratista y matriz de cumplimiento de requisitos en seguridad y salud en el trabajo (numeral 6.9 del anexo técnico).

  RESPUESTA: Con el presente documentos, se presentará la carta de compromiso por parte del contratista y se adjunta dentro del informe quincenal, un apartado independiente para dar cumplimiento a los requisitos de la matriz de seguridad y salud en el trabajo.

- No se ha recibido el plan detallado de trabajo exigido en el Plan detallado de trabajo (numeral 4.1 del Anexo Técnico)

RESPUESTA: Es importante aclarar, que dentro del alcance del desarrollo del contrato la entidad planteo el cambio completo de la estructura metálica, lo cual no es necesario, toda vez que las dos estructuras existentes, están en condiciones optimas y solo requieren un mantenimiento. En ese sentido el desarrollo del contrato y el alcance del mismo tiene un cambio sustancial, por lo tanto, los documentos contractuales solicitados tendrán cambios abruptos al momento de definir dicho alcance. Sin embargo, en aras de dar cumplimiento a lo solicitado se anexa el plan detallado de trabajo de cada uno de los frentes de obra.

Igualmente, en respuesta de la complementación del plan de seguridad y salud en el trabajo y ambiental, del sistema HSEQ se adjunta un apartado puntual de plan ambiental para subsanar el requerimiento solicitado.

Cordialmente,

GILDARDO CASTILLO SÁNCHEZ

ASUNTO: Aprobación especialista estructural

Cordial saludo Arquitecto,

El día 20 de noviembre, la entidad recibió vía correo electrónico la solicitud de cambio del profesional Especialista en Estructuras, debido a que el profesional anteriormente aprobado, Luis Carlos Calderón, no cuenta con la disponibilidad requerida para continuar dentro del proyecto.

Es así, como la entidad ha venido revisando la documentación entregada del profesional, Carlos Mauricio Torres, y solo hasta hoy se evidencia el cumplimiento de todos los requisitos exigidos en el pliego de condiciones del contrato GGC-104-2024.

Los documentos revisados y aprobados por la entidad fueron los siguientes:

1. Formato Experiencia del profesional

2. Hoja de vida

3. Cédula de ciudadanía

4. Tarjeta profesional

5. Vigencia y antecedentes de matrícula

6. Diploma de arquitecta

7. Carta de disponibilidad y compromiso

8. Certificados de experiencia como residente de interventoría

9. Certificados de los contratos de interventoría

La aprobación del profesional, se da a partir de hoy 22 de noviembre de 2024, sin embargo, el profesional no podrá participar en el proyecto hasta que no se cuenten con las afiliaciones al sistema de seguridad social y parafiscales, solicito compartir las afiliaciones requeridas.

Cordialmente

VICTOR CAMILO CLAVIJO MORENO
Coordinador Grupo de Gestión de Infraestructura Física y Mantenimiento

GRU S.A.
GESTIÓN RURAL Y URBANA S.A.S

GRU-GGC-089-2024-15-24

Bogotá, 25 de noviembre de 2024

Arquitecto
LILIANA QUIROGA
Directora de obra
EQUILATERO ARQUITECTURA E INGENIERÍA S.A.S
Bogotá D.C.

Referencia: CONTRATO GGC-089-2024 "ADECUACIÓN DE LA OFICINA LOCAL ICA MAGANGUÉ Y MANTENIMIENTO DE LA OFICINA LOCAL ICA EN CARMEN DE BOLIVAR, DEPARTAMENTO DE BOLÍVAR"

Asunto: Solicitud de cambio de especificación técnica de la teja tipo sándwich.

Respetada arquitecta Liliana Quiroga.

Por medio del presente solicitamos respetuosamente el cambio de la especificación técnica del item *"Suministro, transporte e instalación de cubierta (Teja Termoacústica kingroof ECO-panel tipo sándwich con aislante en polisocianurato PIRSAFE e:30mm Blanco o verde, calibre28, lámina interna Foil Vinil Color natural o similar con las mismas características o mejores). Incluye los caballetes y remates requeridos, además de los accesorios para su debida instalación, y recubrimiento de color"* teniendo en cuenta que existen condiciones técnicas que no permiten la correcta instalación y el perfecto funcionamiento para lo cual es requerida dicha cubierta; es decir que no cumple con las condiciones de empalme e impermeabilización teniendo en cuenta que se debe instalar continua a una teja existente que se encuentra en comodato y que no se puede intervenir.

Adicionalmente, por la geometría y la configuración de la cubierta, se deberían instalar elementos adicionales para poner el set de fijación que recomienda el fabricante, por lo tanto, se debería realizar nuevamente una validación con el estructural.

Por otro lado, estos tipos de empalme con tejas de otra tipología diferente a la propuesta, en la experiencia del contratista, han resultado inoficiosos y permeables.

Ahora bien, ahondando en el tema, este tipo de teja es diferente al que se viene usando institucionalmente en los procesos desarrollados por el ICA, que es, la teja termoacústica Ecoroof UPVC de diferentes calibres.

En consecuencia, solicitamos incluir el item "*Suministro, transporte e instalación de cubierta (Teja Termoacústica Ecoroof UPVC 2.0 mm color blanco o similar con las mismas*

*características o mejores). Incluye los caballetes y remates requeridos, además de los accesorios para su debida instalación" c*on un valor de **$114.724** el cual es menor al precio actual de cubierta, lo cual permite tener un recurso adicional para realizar otras actividades que requiere la sede y mantener las especificaciones de calidad de la intervención.

Tenga en cuenta que con el presente tipo de cubierta se solucionan los problemas de impermeabilización y empalme mencionados en los informes anexos a la presente comunicación.

Cordialmente,

GILDARDO CASTILLO SÁNCHEZ
Representante legal

Leonardo Salgado González	Apoyo a la supervisión / Contratista del Grupo de Infraestructura Física y Mantenimiento
Andrés Albeiro Otero Fajardo	Profesional Universitario

AGENDA – DESARROLLO

Se inicia la reunión con una presentación de todos los asistentes, donde se menciona el cargo y la empresa por la cual se encuentran en el proceso.

Se continúa mencionando el objetivo de la reunión, la cual se realiza para socializar las actividades a ejecutarse en las sedes Magangué y Carmen de Bolívar.

La profesional Katherine comienza con la socialización de la sede Carmen de Bolívar, primero se muestra su localización mediante la herramienta Google maps, se explica que la edificación que se va a intervenir comparte sus instalaciones con Agrosavia, dando claridad que la intervención solo se realizará en el bloque que es utilizado por el ICA, los espacios que están en comodato con Agrosavia no se pueden intervenir.

Se muestra en el plano cuales son las áreas que se van a intervenir y se informa que las actividades a realizarse

son las instalaciones de la red eléctrica y el cambio de teja, con el cambio de los elementos metálicos que se requieran.

Ante esto, el ingeniero Felipe, por parte del contratista de obra, hace una observación respecto a la cantidad de estructura metálica incluida dentro del proyecto, la cual es bastante y es posible que no se requiera dentro del proyecto. El ingeniero consulta que, en caso de no requerirse toda la cantidad, en que se va a ejecutar el recurso restante.

La profesional Katherine menciona que en las sedes tanto en Carmen de Bolívar como en Magangué se deben ejecutar otras actividades no contempladas dentro del presupuesto del proyecto, actividades que tuvieron que ser eliminadas del presupuesto inicial debido al recorte presupuestal que realizó el gobierno nacional.

El Arquitecto Keiber añade que lo importante es ejecutar las actividades que se requieren en cada sede, motivo por el cual, si de la estructura metálica no se ejecuta toda la cantidad, mediante no previstos se podrá ejecutar el recurso adicional.

Luego, se continua la socialización de la sede Carmen de Bolívar por parte del ingeniero electricista Leonardo, el cual menciona de forma global las actividades a ejecutarse del componente eléctrico y hace énfasis en la instalación de un medidor interno.

El Arquitecto Juan Jaimes, representante legal de la interventoría, consulta si la entidad ya adelanto el tramite con la empresa de servicios públicos de la zona, debido al corto tiempo que se tienen para la ejecución del proyecto y los tiempos que pueden tomar estos permisos.

El Ingeniero Leonardo aclara que actualmente la sede solo cuenta con un medidor, desconociendo el consumo real del ICA, motivo por el cual se requiere instalar medidor mediante el cual la entidad conozca su consumo. Sin embargo, resalta que este medidor es solo para conocimiento interno de la entidad, no se independizaran los servicios, motivo por el cual no se requiere realizar el trámite con la empresa de servicios públicos.

Antes de la socialización del proyecto en Magangué, se habla sobre la programación de la visita a las sedes para coordinar con todas las partes.

Días previos a la reunión, la ingeniera Katherine consulta con la interventoría y el contratista de obra sobre la posibilidad de realizar la comisión los días 10 y 11 de octubre, quienes expresan que prefieren realizar la comisión días posteriores con el fin de que asistan los profesionales que estarán durante la ejecución de la obra. Motivo por el cual, se menciona que se programará la comisión para los días 17 y 18 de octubre, y todas las partes están de acuerdo.

El arquitecto Keiber menciona que la ingeniera Katherine no podrá asistir a la visita inicial debido a que se le cruzan con otras actividades, informando que la comisión la realizarán el ingeniero Leonardo y el arquitecto Andrés Otero.

En este momento, se le informa al arquitecto Andrés sobre la visita que se debe realizar y se le indica que posterior a la reunión se le explicará de forma detallada todas las actividades que se deben ejecutar en cada una de las sedes.

Luego, se menciona sobre las posibles modificaciones que se deben realizar a los contratos tanto de obra y de

interventoría.

El arquitecto Keiber menciona que es posible que se requiera la modificación al plazo y la forma de pago, con el fin de darle un mayor flujo de caja, no amarrar ningún porcentaje a la liquidación del contrato y poder ejecutar el recurso en esta vigencia, con el fin de no incurrir en una reserva presupuestal. Situación con la que estuvieron de acuerdo ambos contratistas.

Luego se continua con la socialización de la segunda sede, la ingeniera Katherine menciona que se va a intervenir la cubierta, el tema eléctrico, el cerramiento, baños, cocinas y mantenimiento general (pintura).

El ingeniero Felipe consulta si la sede es compartida a lo que la entidad responde que no, que la sede solo esta a cargo del Ica.

La ingeniera Katherine informa que se les van a compartir los planos de las sedes y del diseño eléctrico, y menciona que el diseñador fue el Ingeniero Leonardo el cual esta presto a colaborar en caso de surgir dudas o inquietudes.

El arquitecto Kieber procede a preguntar si tienen alguna inquietud con el alcance del proyecto o con las actividades que están contempladas dentro del proyecto.

El ingeniero Felipe menciona que es importante revisar el tema de la estructura de metálica y las especificaciones técnicas porque no está claro que incluye el item.

El arquitecto Keiber consulta a la ingeniera Katherine si el contrato tiene ofrecimiento adicional, plan de calidad, y ensayos. A lo anterior, la ingeniera responde que si incluye el suministro e instalación de dos aires acondicionados, el plan de calidad lo debe presentar el contratista de obra, y en el presupuesto de interventoría se dejo una cantidad pequeña para ensayos, pero por el alcance del proyecto es posible que no se requiera.

El arquitecto Juan Jaimes consulta cómo será el modo de entrega de los espacios a intervenir, si se van a desocupar todas las áreas o el contratista deberá trabar por tramos.

La ingeniera Katherine menciona que en Magangué si se debe realizar por zonas, debido a que se debe ir trasladando al personal de la sede.

Se muestra en el plano, los bloques o tramos en los cuales se pueden ir realizando la intervención.

Aquí el ingeniero Leonardo menciona que el laboratorio no se va a intervenir, a lo que se aclara que la cubierta si se debe intervenir.

El arquitecto Keiber indica que se debe avisar en la sede la intervención para coordinar con el laboratorio las fechas en las cuales se va a realizar dicha intervención.

Continua la ingeniera Katherine mencionado que en la sede de Carmen de Bolívar si se puede realizar la intervención del bloque completo, y se reitera que en la sede e Magangué se trabajaría por bloques completos para facilitar la ejecución.

Se informa, además, que los encargados de la sede y el gerente ya están enterados del tema y están a la espera del inicio de la obra.

El arquitecto Juan Jaimes solicita apoyo a la entidad para la socialización del proyecto con los encargados de la sede, el gerente de la seccional para que se realice el desocupe de todos los espacios. Resalta la importancia de dejar las áreas libres porque es muy complejo que el contratista ejecute las actividades con los puestos de trabajo.

El ingeniero Felipe menciona que preferiblemente los movimientos de los equipos de trabajo los realice los encargados de la sede, porque se corre el riesgo con los equipos electrónicos que se dañen, y con el tema de garantías se tendrían algunas implicaciones.

El arquitecto Keiber indica que se debe coordinar con el gerente y el profesional en sistemas de la seccional para realizar el traslado de los equipos de cómputo.

La ingeniera Katherine menciona que los equipos de cómputo no se incluyeron dentro del presupuesto. Además, se indica que el gerente tiene claridad sobre las obras y que ellos serán los encargados del traslado.

Se informa, además, que todos los cambios o modificaciones en las actividades de obra se realizan desde la supervisión de las oficinas nacionales.

El arquitecto Keiber menciona que nosotros somos quienes conocemos el alcance del contrato, indicando que en ocasiones los encargados o gerentes seccionales les solicitan algunas actividades a los contratistas que afectan el objeto del contrato y el presupuesto oficial, por lo cual se advierte al contratista que todas las modificaciones deben ir aprobadas por la interventoría y luego por la entidad (supervisión).

La ingeniera Katherine informa sobre el correo que envió al contratista de obra solicitando adelantar todos los trámites administrativos requeridos previa firma de acta de inicio. Además, se indica a la interventoría que se enviará un correo posterior a la firma del contrato, solicitando las hojas de vida de los profesionales.

El arquitecto Juan Jaimes solicita el contacto del contratista de obra para que tengan canal de comunicación e indica que empezará a revisar los documentos una vez sean enviados por el contratista.

Adicionalmente, el arquitecto menciona que las demás dudas se pueden resolver en la visita a las sedes y que es importante la asistencia del ingeniero eléctrico debido a que ve que el alcance de los dos frentes tiene un gran componente eléctrico.

La recomendación del arquitecto Keiber al contratista de la obra es adelantar todos los temas logísticos de la obra, ubicar la fuente de los materiales, que no se esperen hasta firmar acta de inicio porque se presentarían retrasos en la obra.

El ingeniero Felipe indica que entregará las hojas de vida y los APU antes de la visita, y una vez se realice la comisión realizará entrega de los demás documentos.

AGENDA – DESARROLLO

Se inicia la reunión por parte de la entidad, indicando que el objetivo es conocer el avance de la documentación requerida previa firma de acta de inicio.

El arquitecto Juan Jaimes menciona que están trabajando en la subsanación de los documentos requeridos de la Directora y la profesional SST, indicando que es complicado recopilar la certificación de los contratos de interventoría.

Adicionalmente, solicita evaluar la hoja de vida del ingeniero electromecánico, teniendo en cuenta que cuenta con una amplia experiencia laboral en la instalación de redes eléctricas, y enfatizando que dicha profesión si esta autorizada para llevar a cabo las actividades necesarias dentro del proyecto.

El ingeniero Leonardo, solicita enviar la hoja de vida completa del ingeniero con toda su experiencia y formación académica, con el fin de verificar el pesum académico donde estudio el profesional, la idoneidad y experiencia en los trabajos de redes eléctricas.

La ingeniera Katherine informa, además, que se validará el pliego de condiciones para verificar que si se permita otro perfil diferente al eléctrico o electricista.

Luego se le da la palabra al ingeniero Felipe, quien nos comenta lo siguiente:

1. Documentos para el inicio de obra: no se pueden entregar todos hasta darle inicio al contrato.

2. Espacios o áreas a intervenir: de qué manera se van a entregar los espacios, y la disposición de los mismos. Con el fin de lograr determinar el cuadro de cuadrillas y el cronograma de obra. Menciona que sin esa información concisa, no se puede determinar el cronograma de trabajo, toda vez que podrá variar de acuerdo a la entrega de los espacios.
3. Balance inicial: considero que se entregaría una vez iniciada la obra, después de realizar el replanteo de las actividades.
4. Estructura metálica: revisando la generalidad de la estructura metálica aparentemente se encuentra en condiciones óptimas para reutilizarlas, sin embargo, se espera a la visita del ingeniero estructural para determinar si requiere un reforzamiento y no en cambio completo. Sin embargo, se quiere poner a consideración de la entidad, porque siendo así se debe invertir el recurso en otras actividades que al parecer se requiere en las sedes, especialmente en Carmen de bolívar, donde no hay mantenimiento de fachadas.
5. Tipo de teja: se solicita el cambio de teja debido a que el empalme entre una y otra teja no sería el mas adecuado en cuanto el tema de escorrentía y la parte visual, teniendo en cuenta que la sede es compartida con Agrosavia.
6. Inquietudes sobre el modificatorio del contrato, el cual tiene implicaciones jurídicas que nos preocupan, indicando que no se pueden comprometer a ejecutar el contrato en dos meses, debido al tema constructivo y la época del año.
7. En cuanto a los requerimientos administrativos se esta trabajando en el informe diagnóstico, se tiene los análisis de precios unitarios, se analizó el tema eléctrico del cual no se tiene dudas, los documentos de los profesionales y se tiene dificultad del tema estructural, el cual se está resolviendo para entregar toda esta documentación en el transcurso de la semana. Quedaría pendiente el cuadro de cuadrillas, cronograma, plan ambiental y SST que depende de la ejecución de la obra y determinación de los espacios.
8. En la parte eléctrica no se tiene ningún problema, hay un tema de mayores y menores cantidades mínimo.
9. De la parte civil se tienen varias inquietudes que se van a evidenciar en otro si y en unos no previsto, que la entidad no quiere hacerlos.

La ingeniera Katherine procede a darle respuesta a cada uno de las inquietudes generadas por el contratista de obra, previamente resalta la importancia de proceder con la entrega de los documentos iniciales para darle inicio a los contratos.

Se debe avanzar en los documentos para darle inicio al contrato, se conoce que la obra no se ejecuta en 2 meses, pero ello no significa que pueda postergar el inicio para noviembre o diciembre.

1. Espacios o áreas a intervenir: se reitera la información dada en la primera reunión, en Carmen de Bolívar se va a desocupar todo el bloque del ICA, y en Magangué se va a trabajar por tramos divididos en bloques completos. Se indica que dentro del contrato de obra se incluyó el traslado de archivos y escritorios, lo único que no deben trasladar es los equipos tecnológicos, por tanto, el cronograma debe incluir todas las actividades preliminares.

El ingeniero Felipe menciona que el tema se entendió, en Carmen de Bolívar no hay problema, pero que en la visita se indicó que se debe hablar con la encargada del laboratorio para verificar cuando van a realizar el traslado de los equipos internos de dicha área. Además, menciona que el cronograma de obra esta supeditado a si se cambia o no la estructura, consultando si pasa el cronograma con las actividades iniciales y una vez se defina lo de la estructura, se hará su modificación.

La ingeniera Katherine indica que la idea de los documentos iniciales, diagnóstico, balance y cronograma se

deben trabajar con la información levantada en la visita del diagnóstico. El informe de diagnóstico inicial, como ya se había acordado iba a quedar con la misma cantidad de estructura metálica y de teja, y cuando se de inicio a la obra, se retire el cielo raso y se contrate al estructural, se realizará las modificaciones pertinentes.

Se indica que la entidad no esta en contra de las obras no prevista, porque pueden surgir, pero estas se deben presentar una vez se de inicio a la obra y se tenga claridad completa de lo que se requiere en la estructura.

El arquitecto Andrés Otero realizó consulta en la visita y encontró que el laboratorio no pertenece al Ica, pues se encuentra en comodato con Fedearroz, indicando que se debe verificar el estado del comodato y si se puede o no intervenir.

La ingeniera Katherine continua con su intervención:

1. Respecto a los espacios, iniciar en Magangué por los bloques administrativos, y dejar por último la intervención del área de laboratorios, mientras la entidad realiza las respectivas consultas sobre el posible contrato de comodato. Se da indicaciones de realizar el cronograma con todo el espacio libre en Carmen de Bolívar y la intervención por tramo en Magangué iniciando en el área administrativa.
2. Balance inicial: sería lo mismo con las actividades iniciales contempladas, se reitera que durante la ejecución el balance si irá actualizando.

El ingeniero Felipe indica que se presentará el balance original y que una vez se realicen las actividades preliminares, se avanzará en la modificación del balance.

La ingeniera Katherine continua con su intervención, reiterando que la entidad no puede exigir que se tengan trabajadores sin firmar el acta de inicio, por eso se tiene urgencia en iniciar el contrato.

1. Estructura metálica: la definición de la cantidad de estructura metálica solo la podemos conocer iniciado el contrato, reiterando no te puedo exigir que contrates al estructural o la mano de obra para el retiro del cielo raso sin ni siquiera firmar el acta de inicio, entonces una vez se tenga todo listo, se realicen las preliminares y se evalúe la estructura, se podrá realizar un balance más acertado y así determinar que obras no previstas se deben incluir dentro del proyecto.

2. Tipo de teja: nos deben compartir el tipo de teja que ustedes proponen para realizar la evaluación en la entidad y verificar si se aprueba el cambio. Se consulta al contratista si ya se tiene alguna propuesta en mente para el cambio de teja.

El ingeniero Felipe menciona que aún no se a verificado el tema, que fue algo que se mencionó en la visita.
Además, solicita plazo hasta el viernes para entregar toda la documentación que falta para darle inicio al contrato.

El arquitecto Juan Jaimes solicita que a medida que se tengan los documentos, los vayan compartiendo con el fin de ellos avanzar en la revisión.

La ingeniera Katherine propone hacer otra reunión con los abogados de las partes para analizar el tema del posible modificatorio.

Adicionalmente, reitera la urgencia de empezar con la ejecución el contrato de obra, resaltando que el tema

del modificatorio se puede validar una vez se inicie el contrato, por el momento es fundamental entregar todos los documentos requeridos.

El ingeniero Felipe consulta si la interventoría puede entregar todos los documentos en el transcurso de la semana, con el fin de poder darle inicio al contrato el día 28 de octubre.

EL arquitecto Juan Jaime indica que a más tardar el día 22 de octubre enviará todos los documentos para que esta semana queden subsanadas las hojas de vida.

La ingeniera Katherine solicita al contratista de obra agilizar todos los documentos debido a que estos deben estar revisados y aprobados por la interventoría previa firma del acta de inicio.

El ingeniero Leonardo solicita a la interventoría la justificación sobre la hoja de vida del ingeniero electromecánico, donde se indique que el profesional puede realizar las actividades de un ingeniero eléctrico.

Se finaliza la reunión con el compromiso de entregar toda la documentación aprobada el lunes 28 de octubre y ese mismo día firmar el acta de inicio.

AGENDA – DESARROLLO

Se inicia la reunión con la presentación de todos los asistentes.

El arquitecto Keiber comienza la reunión solicitando al contratista indicar las dudas que se tienen respecto al plazo y forma de pago, aclarando que ese tema ya se había tratado en la primera reunión.

El ingeniero Felipe toma la palabra, expresando que se encuentran preocupados por el plazo del contrato, el cual quedo hasta el 31 de diciembre, y según se evidencio en la visita a las sedes, el plazo para ejecutar la obra no es suficiente, considerando la época en la que nos encontramos.

El arquitecto Keiber consulta al contratista si posible de aquí a diciembre ejecutar todas las actividades, teniendo en cuenta que el contrato implica actividades de mantenimiento.

El ingeniero Felipe expresa que, una vez realizada la visita a las sedes, se evidencia que para finalizar las actividades al 100%, ellos requieren de 3 meses, teniendo en cuenta la dinámica de diciembre.

Respecto a la estructura, pudimos verificar puntos específicos donde se evidencia que está bien. Sin embargo, vamos a esperar a nuestro especialista que nos dé el concepto técnico.

El tema que nos preocupa es el tiempo de diciembre, en especial Magangué donde se debe ejecutar el cerramiento, el cual es un poco dispendioso de hacer.

¿El abogado Alexander consulta cómo está la forma de pago del contrato?

El arquitecto Keiber menciona que se pretende realizar un modificatorio para aumentar el flujo de caja y evitar la constitución de reservas presupuestales.

EL abogado Alexander resalta que, debido a las vicisitudes del proceso, se nos corrieron los plazos, y se entiende que el plazo inicial era de 4 meses. Resalta que es un tema que se va evaluando a medida que avance la ejecución del contrato, y según los contratiempos que se tengan, pero que a la fecha no se puede generar una prórroga si no se ha dado inicio aún.

El arquitecto Keiber resalta la importancia de la modificación en la forma de pago, y la premura que se tiene para darle inicio al contrato, con el fin de lograr que la menor cantidad de recurso posible quede como reserva.

El ingeniero Felipe expresa que les preocupa el hecho de no poder terminar las obras a tiempo y que la entidad proceda a realizar un proceso de incumplimiento.

El abogado Alexander da un parte de tranquilidad al contratista, indicándole que mientras se evidencia ejecución de obra, avance en las actividades eso no va a pasar. Reitera que lo importante es darle inicio al contrato y demostrar que, si se está ejecutando, en caso de requerirse una prórroga, esta se realizará con la debida justificación.

El representante Gildardo, consulta que, si existe alguna posibilidad en la modificación del pago, de incluir algún anticipo.

El abogado Oliver le explica que para la entidad jurídicamente es imposible acceder a esa solicitud.

El abogado Luis realiza una invitación a darle inicio a la obra y poder avanzar.

El abogado alexander indica que, al ser dos frentes de obra, pueden avanzar simultáneamente en cada frente e ir cobrando lo que se vaya ejecutando.

El arquitecto Keiber informa al contratista que el recurso que pase como reserva, debe ser solicitado al ministerio de Hacienda, por lo cual el recurso se habilita después de febrero.

El ingeniero Felipe menciona que como contratistas tienen la meta de ejecutar lo máximo posible en la presente vigencia.

El abogado Luis indica que es importante que el apoyo de la supervisión explique cuales son los pendientes para el tema del inicio de obra, porque queremos arrancar ya.

El arquitecto Keiber menciona que vio la cronología del contrato y se evidencia que desde que se realizó la firma ya ha pasado un mes.

La ingeniera Katherine explica que inicialmente se perdió algunos días debido a que la interventoría se firmó el 09 de octubre, posteriormente se realizaron los trámites de aprobación de pólizas, y visitas a las sedes.
Resalta que el tiempo que le preocupa a la entidad es el que se ha perdido después de la visita, teniendo en cuenta que ya va para dos semanas y aún no se ha recibido la documentación.

El ingeniero Felipe indica que la semana pasada le compartió una información a la interventoría, esta semana he compartido las hojas de vida y el informe diagnóstico, y aún me falta el cronograma que lo envío el día de hoy, y el plan SST que espero compartirlo el día de mañana.

El abogado Alexander consulta si ya se tiene todo listo de la interventoría.

La ingeniera Katherine resalta que, la interventoría ya cumplió con todos los requisitos, que la idea era darle inicio al contrato, pero se está a la espera del contrato de obra.

El ingeniero Felipe menciona que la intención de ellos es iniciar lo más pronto posible, por lo que propone iniciar el viernes 01 de noviembre, para ir desmontando el cielo raso y que el estructural la otra semana pueda realizar su inspección.

El representante Gildardo, consulta si el contratista debe pasar alguna solicitud para el tema del modificatorio?

El arquitecto Keiber responde que si es necesario que envíen una solicitud a la interventoría, quienes aprobarán y enviaran la solicitud a la entidad.

El abogado Luis pregunta que si la interventoría está conectada y puede ser garante de lo que pasa en la reunión.

El arquitecto juan indica que ellos están prestos para iniciar, que ya cuenta con los profesionales aprobados por la entidad. Respecto al contratista de obra falta que nos presenten el cronograma y el plan SST.
Nosotros estamos dispuestos a iniciar el 01 de noviembre, y entendemos que el personal no va a ingresar personal hasta el próximo martes.

El arquitecto Keiber indica que si se puede iniciar las actividades preliminares.

El arquitecto Juan responde que por la interventoría no hay problema, cuyo personal estará desde el 01 de noviembre en el sitio para dar inicio.

El arquitecto Keiber pregunta que se pudo averiguar respecto al comodato que se tiene en la sede Magangué.

La ingeniera Katherine indica que se revisó el expediente que tiene la entidad y aparece el comodato vencido. Se informa que dentro del comodato se estipulaba que el comodatario es el responsable de realizar el mantenimiento y cualquier tipo de adecuación. Se indica que se elevó la consulta al gerente sobre el estado actual del comodato.

EL arquitecto Keiber menciona que se puede ir trabajando en las demás áreas mientras se define el tema del comodato.

El abogado Luis sugiere que el apoyo a la supervisión debería ir diligenciando el formato de modificación del contrato para ir avanzando en el tema.

La ingeniera Katherine informa que se adelantará el tema.

AGENDA – DESARROLLO

Instituto Colombiano Agropecuario

Se da inicio a la reunión con la presentación de todos los asistentes.

La ingeniera Katherine Patiño, apoyo a la supervisión, indica que el orden del día consistirá en la exposición de los avances de obra de cada uno de los frentes de trabajo, seguido de la socialización de inconvenientes y novedades presentados durante la semana.

Toma la palabra la arquitecta Karen Arias, residente de obra de la sede Magangué, quien informa los avances realizados en esta locación, dentro de los cuales se encuentra el desmonte de cerramiento en alambre de púa y lona verde, desmonte de ventanas, trazado y excavación para muro de cerramiento, desmonte de aparatos e instalaciones sanitarias, además del desmonte de puertas y una porción del cielo raso.

Por su parte, la arquitecta Maira Romani, residente de obra de la sede Carmen de Bolívar, indica que se realizaron actividades de desmonte del cielo raso en madera, se realizó el cerramiento y acopio temporal de los materiales de residuo.

La arquitecta Liliana Quiroga, directora de interventoría, comenta que la información expuesta por las residentes de obra es consecuente con lo evidenciado en obra y los reportes recibidos por parte de la dirección de obra. Así mismo, indica que es necesario dar claridad a varios temas tanto administrativos como técnicos. Se inicia por reportar los porcentajes de avance de la sede Carmen de Bolívar, con una ejecución del 1.73%, contra una programación del 2.13%, sin embargo se han adelantado varios temas de logística que no aportan al porcentaje de avance de obra, pero que son fundamentales para dar continuidad a las actividades en obra; como lo es la visita del especialista estructural del contratista de obra en las dos sedes del proyecto. Se indica que, para el frente de trabajo de Magangué, se tiene una duda con respecto al cerramiento, dado que la descripción de los materiales de este ítem no corresponde con lo que se evidenció en el sitio de la obra.

Así mismo, el ingeniero Javier Castillo, director de obra, comenta que, por su parte como contratistas de obra, cuentan con diversas dudas en cuanto al proceder en la programación de obra, dado que no se tiene claridad con respecto a la estructura metálica de cubierta. De acuerdo con la programación de obra, se tiene previsto el desmonte de las tejas de las cubiertas de ambas sedes; sin embargo, esta actividad no se puede realizar hasta no contar con el concepto del especialista estructural con la aprobación de la supervisión y la interventoría. Así mismo, advierte que se deberá hacer una reprogramación para modificar la ruta crítica y adelantar actividades que no dependan de la intervención de las cubiertas, ya que, de no ser así, se presentará un atraso de obra considerable debido al peso que tienen las actividades de cubierta dentro del presupuesto. Por otra parte, con respecto al cerramiento de Magangué, se solicita autorización para su intervención según las recomendaciones del especialista estructural de Obra, dado que no se cuenta con los diseños de este elemento; esto con el fin de presentar avances en actividades diferentes a la intervención de cubierta.

Con respecto al seguimiento del cronograma, aclara que una vez se tenga el concepto estructural, se generarán modificaciones en el balance de obra y en la programación, por lo tanto, es muy importante dar claridad al tipo de intervención que requieren las cubiertas para que esa sea la base de la nueva programación.

Toma la palabra el ingeniero Clímaco Hernández, especialista estructural del contratista de obra, presentando registro fotográfico de las condiciones iniciales de las estructuras en cada una de las sedes. El día sábado 09 de noviembre se visitó la sede de Magangué, encontrando que la cubierta se encuentra soportada por unas cerchas metálicas dispuestas longitudinalmente, separadas cada 1 metro y apoyadas en los sobre unas vigas cintas de concreto y mampostería. Preliminarmente, el ingeniero considera que la estructura existente es lo suficientemente robusta para soportar las cargas de viento y el peso de las nuevas tejas que se instalarán, sin embargo, realizará el respectivo modelamiento de la estructura y hallará la relación demanda/capacidad. Dadas las condiciones, advierte que es posible que en algunas zonas se deban reemplazar los elementos de apoyo para garantizar el anclaje de la estructura de la cubierta. Por otra parte, el cerramiento para esta sede consiste en un antepecho de concreto con tuberías metálicas, y se plantea una propuesta preliminar asumiendo una capacidad portante del suelo de 5 Ton/m2, teniendo en cuenta que no se tiene información de un estudio de suelos reciente.

Para la sede en Carmen de Bolívar, el ingeniero indica que se encontró una estructura de cubierta muy robusta que resistirá completamente las nuevas solicitaciones, ya que se encuentra conformada por cerchas dispuestas longitudinalmente y separadas aproximadamente cada 1.6 metros, y se apoyan en los extremos sobre cerchas conformadas por perfiles angulares de 1" x 4mm de espesor, que transmiten las cargas a las columnas. Para ambas sedes se remitirá un informe detallado con la evaluación de las estructuras y las recomendaciones finales, el cual será entregado con fecha límite al día lunes 18 de noviembre para su revisión y aprobación por parte de la interventoría.

La ingeniera Katherine Patiño solicita a la interventoría agilizar el proceso de revisión por parte de la interventoría una vez le sea remitido el informe estructural. Adicionalmente, comenta que, según lo visto, para las actividades de cubierta sobrarán cantidades considerables, por lo tanto, se deberá establecer cuáles otras actividades se van a realizar en ambas sedes.

El ingeniero Javier Castillo propone realizar una mesa de trabajo el día viernes 15 de noviembre con el fin de agilizar el aval del análisis y propuesta final para el tema estructural por parte de la interventoría y evitar las revisiones y correcciones redundantes.

La ingeniera Katherine Patiño consulta al especialista estructural de obra si es posible tener lista para la semana en curso, la propuesta para el cerramiento de la sede Magangué, para avanzar en las labores de obra, teniendo en cuenta que las actividades en cubierta dependen del análisis detallado que se entregará a la interventoría la siguiente semana.

El ingeniero Clímaco Hernández, indica que es viable adelantar las revisiones para la viga del cerramiento y realiza un diseño preliminar para el cerramiento, el cual consiste en zapatas aisladas de 1x1x0.3m a 1m de profundidad, con columnas de sección transversal de 0.30x0.30m y unidas por una viga de concreto reforzado de la misma sección transversal, y el muro de antepecho se realizará en mampostería, sin embargo este planteamiento se hace sin tener un diseño de suelos.

El ingeniero Hugo Vargas, geotecnista del grupo de infraestructura del ICA, comenta que para la propuesta del cerramiento se debe tener en cuenta que el perfil geológico de la zona se encuentra compuesto principalmente por depósitos sedimentarios paludales, y la preocupación se origina, por la posibilidad de que se presente el fenómeno de licuación por la presencia de arenas marinas y limos en caso de contar con un nivel freático alto. Por este motivo, se consulta con el personal en obra si se ha evidenciado presencia de nivel freático alto luego de las excavaciones realizadas en la zona. Pese a dicha

advertencia, el ingeniero Hugo indica que este tipo de suelos en estado seco presentan una capacidad portante incluso superior a las 5 Ton/m2 que se proponen, por lo tanto, no se tendría ningún inconveniente adicional al fenómeno de licuación que produciría asentamientos en los elementos, lo cual se puede prevenir con la instalación de filtros con material granular o drenes verticales con geotextil.

El ingeniero Alejandro Frasser, indica que se realizaron excavaciones con profundidad de 0.7m sin evidencia de nivel freático.

El ingeniero Clímaco Hernández comenta que se contemplará la instalación del filtro sugerido por el ingeniero Hugo Vargas y se incluirá dentro del detalle de la cimentación del cerramiento.

La ingeniera Katherine Patiño solicita al contratista de obra y a la interventoría realizar un apique de 1x1x1m y hacerle seguimiento durante 5 días para evaluar el comportamiento del nivel freático y poder definir si se requiere o no el filtro y/o los drenajes.

Por otra parte, el ingeniero Javier Castillo manifiesta una inquietud que tiene el equipo de trabajo de Carmen de Bolívar con respecto al desmonte y reinstalación de la fibra óptica, ya que esta actividad no se encuentra contemplada dentro del presupuesto, pero es necesaria para la intervención de la cubierta.

La ingeniera Katherine Patiño consulta si es estrictamente necesario el desmonte de esta red, además de los aires acondicionados, y en caso de requerirse, se deberá crear un ítem no previsto, aprovechando los recursos sobrantes de la estructura metálica de la cubierta.

El ingeniero Javier Castillo comenta que no sería necesario crear un nuevo ítem no previsto, ya que esta actividad sí está contemplada para la sede de Magangué, por lo que únicamente se deberá agregar al presupuesto de Carmen de Bolívar.

La ingeniera Katherine Patiño indica que, debido a que son dos rubros presupuestales diferentes, no es posible utilizar los ítems contractuales de una sede en otra sede. Internamente en el ICA, los recursos se disponen para sedes específicas y deben ser tratados como obras independientes, a pesar de ser parte de un único contrato.

El ingeniero Javier Castillo aclara que no se trata de combinar los rubros presupuestales, ya que los recursos destinados para cada sede se emplearán en las sedes especificadas; lo que se intenta hacer es utilizar uno de los ítems que ya existe contractualmente para una sede, y adoptarlo en la otra.

La ingeniera Katherine Patiño comenta que, al haber dispuesto el presupuesto como parte de las cláusulas del contrato, cualquier tipo de modificación implicaría la utilización del recurso de modificatorio, por lo tanto, de todas formas se tendría que copiar el ítem de la sede de Magangué y agregarlo como un No Previsto en la sede de Carmen de Bolívar, por medio de un modificatorio.

El ingeniero Javier Castillo propone que una vez realizada la reunión con los especialistas estructurales y se haya definido el proceder con respecto a la cubierta, identificar los ítems adicionales que surjan y realizar un solo procedimiento modificatorio. Adicionalmente, consulta si para el ítem que se va a copiar es necesario presentar todos los soportes que se adjuntarían para la propuesta de ítems no previstos (APUs, cotizaciones, especificaciones técnicas), teniendo en cuenta que esa información ya se tiene contractualmente.

La ingeniera Katherine Patiño indica, que en el caso de ítems que ya cuentan con un valor contractual no es necesario adjuntar esos soportes porque ya existen; así mismo, considera pertinente la propuesta del ingeniero Javier Castillo, ya que este tipo de procedimientos administrativos suelen tomar tiempo, por lo que sería conveniente realizar solamente 1 o 2 modificaciones al contrato. Para los ítems nuevos que surjan, sí se requiere hacer todo el proceso de adjuntar los soportes como APUs, cotizaciones y especificaciones técnicas.

El ingeniero Javier Castillo cuestiona sobre la frecuencia en que se presentarán los informes de avance, ya que el contrato de obra establece la entrega de informes quincenales.

La ingeniera Katherine Patiño aclara que para el contratista de obra son informes quincenales y para la interventoría son informes semanales. Sin embargo, el contratista de obra deberá tener presente la información de avance semana a semana para exponerlo en los comités que se realizarán los días martes por consenso de todas las partes. Adicionalmente, solicita al contratista de obra y a la interventoría indicar la fecha estimada de remisión del acta de cobro parcial para programar la gestión de este proceso pues previo a la aceptación de este trámite se debe realizar ejercicios de visita y verificación en campo. Para finalizar, en caso de presentarse inconvenientes y/o dudas que se deban solucionar de manera oportuna, debe haber comunicación interna entre las partes y no necesariamente esperar cada semana el comité para exponer las situaciones presentadas.

Las partes coordinan y acuerdan mantener un día fijo para los comités técnicos del proyecto para los martes a las 2:00 p.m.

AGENDA – DESARROLLO
Se inicia la reunión con la presentación de todos los asistentes. La ingeniera Katherine Patiño, apoyo a la supervisión, solicita información al contratista de obra sobre las entregas y subsanaciones pendientes (documentación de trabajo en alturas del equipo eléctrico, la entrega del plan detallado de trabajo, el plan de seguridad y salud en el trabajo, el plan detallado de cubierta), además del concepto estructural que soporta el diseño del cerramiento de la sede Magangué, y finalmente los avances de la semana en cada uno de los frentes de trabajo. El ingeniero Felipe Castillo, director de Obra, indica que ya se encuentran en proceso de recopilación de la documentación requerida para la autorización del trabajo en alturas del equipo de instalaciones eléctricas, así mismo, ya se tienen listos los planes detallados de trabajo para ambos frentes de obra, sin embargo, dichos planes se tendrán que ajustar, de acuerdo con el análisis realizado a la estructura de las cubiertas en ambas sedes, ya que estas cumplen con la capacidad de carga requerida, por lo tanto, no requieren de un reforzamiento estructural, no obstante, sí se requiere realizar el mantenimiento de los perfiles y se deberán instalar unos perfiles adicionales para la instalación de la nueva cubierta. Con respecto al plan SST, se realizó una presentación para la aprobación y firma del acta de inicio, sin embargo, estarán dispuestos a atender cualquier observación o requerimiento adicional. Así mismo, el plan detallado de cubierta no se había remitido debido a que aún no se contaba con el concepto del especialista del especialista estructural. Para el cerramiento, se recibieron algunas observaciones con respecto a las cargas horizontales que ejerce el terreno sobre la viga de cimentación; ya se tiene listo el oficio para dar respuesta a esa observación, sin embargo, el comité pasado se acordó asumir una capacidad portante del terreno que garantiza un correcto funcionamiento de los elementos, teniendo en cuenta que no existe un estudio de suelos reciente. Dentro de las obligaciones contractuales no se encuentra el diseño del cerramiento, pero de todas formas el contratista de obra no tuvo problema en realizar y presentar los planos de detalle. Así mismo, el contratista de obra expone en el comité el informe técnico que da respuesta a la observación realizada por la interventoría con respecto al cerramiento; describiendo todo el proceso de cálculo y diseño preliminar basado en criterios conservadores y las respectivas verificaciones. Esa información será remitida a la interventoría para la revisión y aprobación por parte de su especialista estructural. Por otra parte, también se muestra el informe detallado del análisis realizado a las estructuras de cubierta en cada una de las sedes, en donde se evidencia que la estructura de la sede Carmen de Bolívar es la más robusta y la que menos preocupaciones genera, sin embargo, ambas estructuras

cumplen con los requisitos de carga. Toda esta información será remitida a la interventoría tan pronto se tengan las recomendaciones constructivas por parte del especialista estructural de obra.

Con respecto al avance en obra, para la sede de Carmen de Bolívar el avance ha sido limitado, ya que no hay tantas actividades de obra civil, sin embargo, el día de hoy se recibió cerca del 70% del material para los trabajos eléctricos, por esta razón, se deberá ajustar el plan detallado de trabajo para iniciar por las actividades eléctricas y mientras se da solución y aprobación al tema de cubiertas. Las actividades preliminares ya se completaron en su mayoría.

Toma la palabra la arquitecta Maira Romaní, residente de obra de la sede Carmen de Bolívar, indicando que se han ejecutado las actividades de localización, trazado y replanteo del tejado y las cantidades fueron verificadas junto con el residente de interventoría, observando que las diferencias con las cantidades contractuales no son representativas. Se realizó el cerramiento en lona verde, excavaciones manuales, traslado de mobiliario, desmonte de cielo raso en madera, y trabajos de limpieza de la estructura de la cubierta. Adicionalmente, se iniciaron las actividades eléctricas, iniciando por el descargue del material recibido, el retiro de las luminarias y su cableado. El porcentaje ejecutado corresponde al 1.86%, contra un 2.86% programado; este atraso se debe a la espera del dictamen del especialista estructural para iniciar la intervención en la cubierta.

Por su parte, la arquitecta Karen Arias, residente de obra de la sede Magangué, informa que hasta el momento ya se han completado al 100% actividades preliminares como las excavaciones manuales, la instalación del cerramiento en lona verde, el desmonte de puertas, ventanas, cortinas, persianas, rocería, desmonte de aparatos sanitarios, divisiones de baños, y parcialmente la localización y replanteo. El porcentaje de avance ejecutado corresponde al 1.77%.

El ingeniero Felipe Castillo solicita realizar una videollamada el día de mañana con la profesional residente de obra de la sede Magangué, ya que durante las actividades de localización y replanteo se observó que varias cantidades contractuales no coinciden con lo evidenciado en campo para el cerramiento. Por ejemplo, existe un ítem de desmonte de ventanas, que inicialmente era de 4m^2 pasó a ser de aproximadamente 42m^2. La residente de obra de esa sede tiene varias dudas con respecto al lugar en donde se ejecutarán esas actividades, para poder realizar el respectivo balance soportado por actas de mayores y menores cantidades. Así mismo, se está a la espera de las indicaciones por parte de la entidad para el uso del presupuesto destinado inicialmente a la estructura de la cubierta y que no se empleará para tal fin debido a que la evaluación del especialista estructural indica que las estructuras existentes son perfectamente funcionales; todo esto con el fin de verificar en campo las cantidades requeridas para los nuevos ítems y realizar todos los trámites administrativos correspondientes.

Toma la palabra la arquitecta Liliana Quiroga, directora de interventoría comenta que para el componente SST y ambiental se remitió un oficio indicando que en ambas sedes del proyecto se debe realizar una manipulación y disposición especial para unas tejas de asbesto cemento, las cuales no están contempladas en el PMA. Adicionalmente, solicita al contratista de obra realizar la entrega oportuna de todos los requerimientos para lograr un seguimiento adecuado por parte de la interventoría. Así mismo, le solicita al contratista de obra remitir la documentación para ingreso del personal en obra con suficiente tiempo de antelación para realizar la respectiva gestión, de lo contrario no sería posible autorizar los ingresos de manera oportuna. Con respecto al cerramiento y la cubierta, la información remitida a la

interventoría debe ser amplia y suficiente para que cualquier persona ajena al proyecto la pueda leer y comprender, se solicita también celeridad en la entrega del tema de cubierta y todos los demás requerimientos, ya que, a hoy, se está trabajando bajo las condiciones iniciales del contrato, cuya terminación es el 31 de diciembre de 2024. Para efectos de la exposición de los avances, la interventoría presentará las actividades ejecutadas durante la última semana y no de manera acumulada. Para la sede de Magangué, pese a que aún no se cuenta con el concepto de viabilidad del cerramiento, el ejecutor inició actividades de figurado de acero para los elementos estructurales del mismo, también se iniciaron las actividades eléctricas. El porcentaje de ejecución a corte de hoy es del 1.8%. Para la sede Carmen de Bolívar, las actividades realizadas son principalmente del sistema eléctrico, completando un porcentaje de avance de 1.33%.

Toma la palabra el ingeniero Rafael Santos, residente de interventoría para la sede Carmen de Bolívar. Comentando que el día de ayer se realizaron labores administrativas ya que aún no se cuenta con la autorización para ejecutar actividades en cubierta. Se realizó un recorrido en la sede y se identificaron varios puntos a considerar como el desmonte de los aires acondicionados que no está contemplado en el presupuesto. Se evidenció también que el andén perimetral de la sede se encuentra en mal estado. Con respecto al avance, la programación no indica mayores avances debido a que las actividades de cubierta son las que tienen mayor peso.

Por su parte, la arquitecta Jennifer Torregrosa, residente de interventoría para la sede Magangué, indica que se realizó una revisión en conjunto con la arquitecta residente de obra, y se evidenciaron varias diferencias en las cantidades a ejecutar, como la cantidad de aires acondicionados a desmontar, las medidas de los mesones que se deben demoler, la cantidad de ventanas.

La arquitecta Liliana, solicita al contratista de obra informar de manera oportuna las dudas que se tengan sobre la ejecución de las actividades y se siga el conducto regular para dales manejo y rápida solución. En este punto del proyecto todas las dudas deberían estar resueltas, sin embargo, si aún persisten, se les solicita remitir el respectivo listado de puntos para resolver lo antes posible.

La ingeniera Katherine Patiño manifiesta sorpresa respecto a las inconsistencias presentadas en las cantidades, ya que el director de obra, se reunió con el ingeniero Leonardo Salgado, y otros profesionales y realizaron unas visitas de obra en cada una de las sedes durante el mes de octubre, con el fin de identificar las áreas a intervenir, pero según lo visto, ni el ejecutor ni la interventoría tienen claridad de las intervenciones que se deben realizar. Me gustaría conocer cuales son las actividades y cantidades específicas porque veo que no se tiene claro cuales son las obras que se están realizando. Por esta razón, solicita al contratista de obra remitir la información de los ítems que presentan inconsistencias en las cantidades de obra, para su revisión detallada. Se propone realizar un comité en sitio solo para revisar todas las inconsistencias y definir las actividades a priorizar de acuerdo con el resultado de la cubierta. Así mismo, consulta a la interventoría si sería posible contar con la revisión y el aval de su parte, para la estructura de la cubierta.

La arquitecta Liliana indica que, de ser recibida la información el día de hoy, se podría contar con el visto bueno y el concepto del especialista estructural de la interventoría antes de finalizar la semana.

La ingeniera Katherine indica que se programará visita para la próxima semana, para el lunes realizar el recorrido en sitio y poder aclarar todas las inconsistencias que se tienen.

El ingeniero Felipe Castillo comenta que se comenzarán a evaluar las actividades que se podrían cubrir e incluir en el alcance, teniendo en cuenta el rubro sobrante de la estructura de la cubierta. Durante esta semana se avanzará con los APUs de los ítems no previstos.

La ingeniera Katherine comenta que compartirá con las demás partes un diagnóstico realizado por la entidad para priorizar las actividades en las que se utilizará el rubro de la estructura metálica de la cubierta, ya que, por ejemplo, en la sede Carmen de Bolívar, se requiere intervenir la cocina, y solicita al contratista de obra tenerlo en cuenta en la proyección a realizar.

En cumplimiento de los compromisos del comité anterior, el contratista de obra realizó la excavación solicitada por la supervisión para verificar el nivel freático y tomar decisiones con respecto al cerramiento perimetral de la sede Magangué. Así mismo, se deja constancia del incumplimiento del compromiso de la mesa de trabajo programada para definir el tema del cerramiento y la estructura de las cubiertas.

La ingeniera Katherine reitera las obligaciones que se deben cumplir; en primer lugar, se debe ajustar el cronograma de obra, de acuerdo con el acta de inicio del contrato; la entrega del plan detallado de trabajo bajo las condiciones actuales de contrato, ya que no es posible esperar a realizar todas las modificaciones que se requieren; así mismo, se solicita el cuadro de cuadrillas, el cual debía ser entregado junto con los APUs. Por otra parte, contractualmente, el 5% del personal del contratista de obra debe ser de protección especial, y hasta la fecha no se han entregado los soportes respectivos para validar esa información. También se encuentra pendiente la entrega del informe quincenal de obra. Se solicita la asistencia de los profesionales a los comités, teniendo en cuenta que el especialista estructural de obra no estuvo presente y se requería de su participación durante el comité.

La supervisión le solicita a la interventoría ser específico con las observaciones realizadas al plan SST del contratista de obra para que este las pueda subsanar oportunamente y se eviten retrocesos en el avance.

Por último, la supervisión le recuerda tanto a la interventoría como al ejecutor, revisar las obligaciones descritas en el anexo técnico para dar cumplimiento a las mismas, dado que allí se evidencia que todos los componente estructurales y eléctricos del proyecto deben ser atendidos por el contratista.

La profesional SST del contratista de obra, comenta que se le está dando cumplimiento al requerimiento de vincular el 5% de personal de protección especial, ya que se cuenta con un adulto mayor laborando. En horas de la tarde se remitirá a la interventoría toda la información y soportes requeridos.

La supervisión solicita al contratista de obra dar celeridad a todos los trámites administrativos para verificar el cumplimiento de las obligaciones contractuales.

AGENDA – DESARROLLO

Hace presencia en la sede del Carmen la supervisión encabezada por la ingeniera Katherine Patiño el director de obra Felipe castillo y la directora interventoría Liliana quiero que Sepúlveda para iniciar el recorrido de comisión para los frentes de El Carmen de Bolívar y Magangué dando inicio por la sede del Carmen.

Ingresando a la se evidencia el punto administrativo y la ubicación del campamento para las partes se observan los avances en los trabajos de retiro de cielo raso actividades eléctricas y retiro de equipos varios, así como las áreas completamente desocupadas para intervención.

Se evidencia la mala practica realizada por la cuadrilla eléctrica, ya que en el avance de sus actividades elctricas pues se observa el picado leve en una de las vigas aéreas de las oficinas y el picado total de una

sección de la viga área de la recepción, los dos elementos deben ser atendidos de manera correcta, para garantizar su estabilidad y funcionalidad a futuro, además a cuenta y costo del ejecutor, ejecutándose de la siguiente manera; la viga será recalzada haciendo cortes a 45 grados en ambos extremos con su de vino debido resane el resane deberá tener epóxico para garantizar la unión de los dos concretos además la tubería deberá pasar por el muro de la cocina y continuará por un muro falso de 15 cm o lo que se requiera para garantizar su buen funcionamiento así mismo deberá atenderse la actividad en el muro interno.

El recorrido continúa para establecer prioridades en las actividades atender e incluso las no previstas tales como son la atención:

- Atención de muros para resanes y estucos
- Aplicación de pinturas
- Atención de puertas la intervención de cocina
- Reemplazos y reposiciones de vidrios de ventanería
- Mantenimiento de juntas de piso

La atención de estas actividades es en el estricto orden que se redactó.

Además de lo anterior debe remitirse el esquema de la tubería faltante para el componente eléctrico, las puertas deben ser atendidas e instaladas en un material metálico teniendo en cuenta la humedad y las afectaciones que pueden tener por distintas plagas por el clima de la zona, sin embargo, debe conservar la estética de las existentes.

Se debe hacer la socialización con los involucrados entiéndase Agrosavia e ICA en la cual se deben manifestar e informar los tiempos y el alcance de la obra, y esta solicitud aplica para los dos frentes

Se deben entregar los NPS el día 29 de noviembre del 2024.

Se programa mesa de trabajo con los estructurales pues a la fecha continua pendiente para los dos frentes la entrega del levantamiento de la estructura de cubierta, en consecuencia, de las especificación técnica para cada frente.

Para la sede Magangué se inicia el recorrido sobre las 9 de la mañana verificando inicialmente las actividades realizadas y se desarrollan el recorrido con el fin de resolver las dudas que el contratista presenta respecto al presupuesto inicial dejando los siguientes compromisos y aclaraciones, que el balance presupuestal tiene como prioridad máxima las actividades que se relacionan a continuación la atención y correcta ejecución:

- Atención de marcos para puertas teniendo en cuenta las afectaciones que presentan los actuales.
- Retirar el mesón de laboratorio e instalar uno en acero inoxidable incluido la poceta.
- Instalar solo un lavamanos en el baño de hombres e incluir la división para las duchas además se debe aumentar la altura del enchape hasta la ventana en uno de sus muros y en el otro muro hasta superar la salida de la ducha, para este espacio se contempla solo un orinal.
- Se debe incluir una reja de protección para la oficina de archivos que se encuentra ubicada en la parte posterior de la edificación y que en la actualidad no tiene ningún elemento de seguridad adicional.
- El retiro de todas las unidades de aire acondicionado y su posterior instalación.
- Adicionar otro punto de desagüe para el patio interno.

- Reubicar la planta eléctrica al lado del auditorio sobre un nivel y las demás especificaciones que se requiera
- Construir el mesón de cocina de acuerdo con la ubicación y dimensión al que se tenía anteriormente
- Se debe energizar alguna de las zonas ya que actualmente la gran mayoría de las sedes se encuentra sin fluido eléctrico y pueden presentarse problemas de seguridad esta actividad no representa pago para el ejecutor.
- Es necesario cuantificar las áreas afectadas por comején y presentar un NP para esta actividad ya que se requiere un proceso de inmunización en algunas zonas muy puntuales
- Se debe presentar una propuesta para incluir vidrio en la recepción y manejar un espacio completamente cerrado conservando varias de las puertas que se tienen en este lugar e instalando una puerta de vidrio adicional.
- Es necesario redimensionar la ventana de atención de la secretaría para ampliar a dos secciones su hoja corrediza y tener una mayor área de apertura.
- Es necesario ubicar una poceta de aseo prefabricada en el patio interno para trabajos de aseo.

Cerrando el recorrido la interventoría y la supervisión le hacen un llamado de atención al ejecutor, ya que en la sede no se encuentra personal realizando ningún tipo de actividades y es evidente que podrían estarse realizando actividades que no es en concentradas en el cerramiento y en la cubierta, por lo tanto, se le recuerda que la ejecución de la obra es simultánea en los dos frentes.

La interventoría también le requiere al contratista de obra información de cómo va a atender subsanar y cerrar su informe de cubierta ya que si bien es cierto a las fechas se han realizado algunos trabajos para atender la misma no han sido cerrados de manera satisfactoria por lo tanto se considera que la actividad no se ha atendido al 100%.

El director de obra expone que teniendo en cuenta el desarrollo de la mesa de trabajo virtual realizada en horas de la tarde el día de ayer le es imposible continuar con el especialista que actualmente tiene aprobado para la atención de la cubierta teniendo en cuenta que este manifiesta que sus entregables cumplen amplia y suficientemente con lo requerido por lo tanto solicita un plazo hasta el 6 de diciembre para presentar nuevamente el informe y un cambio estructural que atienda específicamente esta actividad.

La supervisión señala que le parece excesivo el plazo y que se requiere de manera urgente e inmediata la atención de la actividad.

La interventoría desde su dirección señala que si viene el plazo es excesivo es la única manera que se tiene para cumplir con dichas actividades de manera satisfactoria sin embargo el hecho que a la fecha no se tenga cerrado dicho informe implica un presunto incumplimiento de sus obligaciones ni fundamentado en los tiempos dados en sus documentos contractuales junto con las fechas anteriormente tomadas para su realización y recibo satisfacción.

El comité se cierra tomando como compromiso tanto de la interventoría como de la obra la elaboración del balance para los dos frentes y las solicitudes de los otros sí que apliquen para ajustar los documentos y presupuestos iniciales en consecuencia a la visita realizada.

TEMAS TRATAR

- Informe de cubierta para las sedes de El Carmen y Magangué
-Intervención de la estructura

En atención al estado actual que presenta la información entregada por el contratista de obra para atender la actividad del informe estructural para el diagnóstico actual de la cubierta, la interventoría y la supervisión asisten a una mesa de trabajo solicitada por ejecutor, dónde se busca a través de este ejercicio brindar a las partes un escenario de concertación más rápido eficaz teniendo en cuenta los trámites realizados anteriormente y la premura por dar cierre a los pendientes que se tienen en dicha actividad.

La interventoría realiza una introducción rápida de la finalidad del ejercicio y por lo tanto cede la palabra al especialista estructural del ejecutor Ing. Clímaco Hernández especialista estructural para que inicie su intervención.

El Ing. Clímaco Hernández inicia con la exposición de cómo realizó sus ejercicios tanto en El Carmen de Bolívar como en Magangué, expone que realizó en los dos frentes una inspección visual y el levantamiento junto con la inspección especial de los elementos que están plasmados en los informes, y que en los mismos informes señala su concepto de no ser necesario el reemplazo ni el reforzamiento total o parcial de las estructuras que actualmente se encuentran en las sedes. También manifiesta que como ya lo ha expuesto en comités varios, las estructuras actualmente cuentan con las condiciones técnicas para continuar en uso pero que sin embargo es necesario realizar un mantenimiento previo a la instalación de las nuevas cubiertas.

La directora interventoría nuevamente toma la palabra y de manera general expone lo solicitado por el especialista estructural de la interventoría, ya que el Ing. Torres, especialista en la interventoría, tiene unas solicitudes muy específicas previo a continuar con la conceptualización de la interventoría.

El Ing. Carlos Torres inicia su exposición manifestando que en efecto en la información remitida por el ejecutor se evidencia las visitas y las inspecciones realizadas en las sedes como lo manifiesta el Ing. Clímaco Hernández, sin embargo, todo lo que él expone no se encuentra fundamentado ni especificado en los documentos remitidos para revisión y conceptualización del estado actual de la estructura de la cubierta, ya que se muestran verificaciones y análisis

puntuales que no permiten evidenciar el estado general de la estructura actual dificultando la revisión del elemento como un todo ósea una estructura completa.

El especialista estructural del ejecutor nuevamente toma la palabra y expone que sus cálculos se realizaron basados en la selección de forma aleatoria de varios de los elementos que poseen las cubiertas, ya que desde su experticia no es necesario realizar el levantamiento total de los elementos para conceptualizar del estado actual de la estructura de cubierta y que los resultados de sus revisiones son concluyentes con la información entregada hasta la fecha.

El especialista estructural de la interventoría interviene y señala que lo solicitado por la interventoría se mantiene, qué como primera medida deben entregarse informes completamente separados para cada uno de las sedes que además es necesario conocer el estado de los elementos de manera individual para entender el comportamiento general de la estructura y que si bien desde el equipo interventoría siempre se ha estado abierto al diálogo y mesas de trabajo, hay actividades mínimas que se requieren para la correcta ejecución de las actividades, que deben realizarse. Por lo tanto, reitera que se necesita todo el levantamiento de las dos estructuras para su correcto análisis y conceptualización, junto con el ajuste documental solicitado.

La directora interventoría solicita la palabra e indica, además, que el alcance del informe independientemente de lo señalado por el Ing. Torres debe entregar el levantamiento de la estructura actual para poder dar su recibo a satisfacción de la actividad de localización y replanteo.

La supervisión del contrato en cabeza de la Ing. Patiño, señala que además dentro de las especificaciones técnicas de las actividades, dentro de las obligaciones contractuales se describe ampliamente cómo debe ser atendida la actividad para considerarse recibidas satisfacción y poder dar correcto cierre, señala además al ejecutor que los tiempos inicialmente dados para finalizar de forma correcta esta actividad está considerablemente vencidos y le requiere al director de obra su intervención.

El Ing. Castillo director de obra, señala que se deben atender las indicaciones recibidas, sin embargo, también indica que no posee los medios en ese momento para tomar nuevos compromisos pues es necesario coordinar de manera interna con su especialista estructural para realizar los ajustes solicitados y tomar así nuevas fechas y compromisos.

El Ing. Hernández nuevamente toma la palabra y manifiesta que con la información entregada se debería dar por cerrado su informe, que no se requieren datos complementarios y de ser nuevamente requeridos necesitaría nuevos recursos y tiempos con los que en la actualidad no cuenta.

El Ing. Torres nuevamente toma la palabra y reitera la solicitud de la interventoría, haciendo salvedad para todas las partes que de no subsanarse lo requerido el tema, continuará sin cierre y se concentrará en un ejercicio de intercambio documental que no llevarán a un reciba satisfacción que finalmente es lo que requieren todas las partes.

La interventoría y la supervisión solicitan al ejecutor informe y/o manifieste cuándo se realizará la atención de lo solicitado por la interventoría, que incluye el levantamiento actual de la estructura no solo por ser un elemento fundamental para verificar su tesis de mantenimiento actual de la estructura de cada una de las sedes, sino que además es de estricto cumplimiento para atender de manera adecuada con las obligaciones del contrato

El Ing. Castillo informa que dará atención a lo solicitado, sin embargo, manifiesta que requiere un plazo adicional para dialogar con su especialista estructural y poder fijar fechas y tiempos de entrega por lo tanto en el ejercicio el día de hoy se abstiene de informar plazos de entrega para lo solicitado.

Con esta intervención se da por finalizado el comité y se le requiere al contratista de obra que el día de mañana en medio del comité de Magangué tenga claro las fechas de atención de ese compromiso para que queden consignados en el acta de comité.
