HARDWARE	SOFTWARE

HARDWARE	SOFTWARE
Hardware is ani element of a computer that's physical this includes things like monitors Keyboards and also the insides of devices microchip and	Software is anything that tells hardware what to do and how to do it including computer programs and app on your phone. So Video Games , photo editors and Webbrowser
The hardware would be the physical phone itself	Software would be its operating systems and its apps
Hardware needs software to tell it what to do	Software also needs hardware in order to act out its
Hardware meaning there's no actual phone if all we have are the programs	Software we would just have a dead phone in out hand it wouldn't be able to make calls
