Introduction to Deploying Liferay DXP

Liferay DXP is one of the most flexible applications on the market today with respect to database and application server support. Liferay DXP supports a wide variety of databases and application servers, freeing you to use the ones you think are best. Liferay DXP also scales very well. You can install Liferay DXP on a shared hosting account, on a multi-node cluster running a commercial application server, or on anything in between. In fact, Liferay DXP is used successfully in all of these scenarios every day. Some features, such as clustering, are only available with Liferay's Digital Experience Platform.

You'll find that because Liferay DXP is extremely flexible in its deployment options, it is also easy to install. If you already have an application server, you can use your application server's deployment tools to install Liferay DXP. If you don't already have an application server, Liferay provides several application server bundles from which to choose. These are pre-configured application servers with Liferay DXP already installed on them. They're easy to install and with a small amount of configuration can be made into production-ready systems.

Read on to learn how you can prepare to install Liferay DXP.
