| **Período del Informe:** | 10 de Mayo de 2025 – 10 de Junio de 2025 |

## 2. Introducción

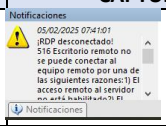

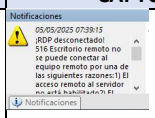

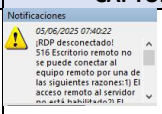

El presente informe tiene como propósito presentar de forma las actividades de monitoreo, soporte y mantenimiento realizadas sobre la infraestructura tecnológica que sustenta el funcionamiento del Visor Geográfico de Corantioquia, operado a través de la plataforma MapGIS. El periodo aquí evaluado corresponde al intervalo comprendido entre el 10 de Mayo y el 10 de Junio de 2025, coincidiendo con el segundo mes de ejecución contractual.

Durante este periodo se llevó a cabo un seguimiento continuo al comportamiento del sistema, con especial atención al desempeño del servidor, la disponibilidad de los servicios geográficos publicados (WMS, WFS, REST), el estado del Portal geográfico y la operatividad de los distintos módulos del visor. Este monitoreo permite anticipar fallas, responder oportunamente a incidencias y mantener la estabilidad del entorno de publicación.

Como parte de las tareas de soporte, se revisaron las funcionalidades clave del visor, incluyendo herramientas de búsqueda, consultas, visualización de tablas de atributos, identificación de elementos, administración de capas, ayudas contextuales y opciones de pantalla dividida. Asimismo, se realizó un control regular del uso de recursos del servidor (procesador, memoria y red), lo cual permite garantizar un funcionamiento fluido y sostenido.

El presente documento consolida los principales hallazgos del monitoreo, las acciones de mantenimiento ejecutadas y las observaciones técnicas relevantes. Constituye el consolidado de los registros de seguimiento, los cuales detallan el estado del sistema a lo largo del mes reportado. Esta información constituye una base fundamental para la toma de decisiones, la mejora continua de la plataforma y la garantía de disponibilidad del visor como herramienta de gestión ambiental y territorial.
