SUSTAINA-BLE PRACTICES

1. RENEWABLE ENERGY

Companies can use clean energy like solar, wind, or water power instead of coal or gas.

Why it is good:

- It reduces pollution.
- It can save money in the future.
- It helps the planet.

2. REDUCE WASTE

Companies should try to produce less trash.

How they can do it:

- Use less plastic.
- Recycle materials.
- Reuse products.
- Compost food waste.

3. SAVE WATER

Water is very important, so companies should use less water.

Ways to save water:

- Use low-flow faucets.
- Collect rainwater.
- Improve factory processes.

4. SUSTAINABLE TRANSPORTATION

Transportation creates pollution. Companies can promote clean transportation.

Examples:

- Encourage bicycles.
- Support public transportation.
- Use electric cars.

5. SUSTAINABLE MATERIALS

Companies can choose materials that are better for the planet.

Examples:

- Recycled paper or plastic
- Biodegradable packaging
- Natural materials like bamboo or organic cotton

6. SUSTAINABILITY CULTURE

Companies should teach employees to care about the environment.

They can:

- Give training.
- Share information.
- Reward employees who help the planet.

7. CIRCULAR ECONOMY

A circular economy means reuse, repair, and recycle products instead of throwing them away.

Companies can:

- Design products that are easy to recycle.
- Reuse materials.
- Accept used products for recycling.

8. USE LESS ENERGY

Companies should try to save electricity and energy.

Simple actions:

- Use LED lights.
- Use smart temperature systems.
- Turn off machines when they are not used.

9. WORK WITH SUSTAINABLE SUPPLIERS

Companies should choose suppliers that protect the environment.

They can:

- Select responsible suppliers.
- Work together to improve sustainability.
- Communicate environmental goals.

10. MEASURE ENVIRONMENTAL IMPACT

Companies should check how they affect the environment.

They can:

- Do environmental audits.
- Get environmental certifications.
- Publish sustainability reports.
