WORKSHOP

1. Complete using present simple form

Sam is a student in the ADSO program at SENA. He loves (1. love) software development. Every morning, he opens (2. open) his IDE and writes (3. write) code for the backend. He works (4. work) with Java and databases. He creates (5. create) SQL queries to get information from the server, but he doesn't like (6. not / like) to write documentation! His teammate, Laura, is the frontend developer. She designs (7. design) the user interface with CSS and React. She understands (8. understand) the logic of the API, but she doesn't manipulate (9. not / manipulate) the database. That isn't (10. not / be) her job. Laura and Sam use (11. use) Git for version control. They commit (12. commit) their changes every day. However, they don't push (13. not / push) broken code to the repository. Before a deploy, the team test (14. test) the application. They want (15. want) a perfect app, so they don't deploy (16. not / deploy) on Fridays. They need (17. need) to rest on weekends!
