INTRODUCCION

Este informe corresponde a la ejecución del estudio topográfico sobre la quebrada el sábalo y amarre de poligonal 1, poligonal 2, poligonal 3, con las cuales se calculó la nube de puntos para el levantamiento tramo 1, levantamiento tramo 2, y el levantamiento tramo 3 en zona urbana y expresada en kilómetros lineales, para un total de 1.740m, EL LEVANTAMIENTO DETALLADO DEL CAUCE, Y 1.740m. EN POLIGONAL DE AMARRE, que comprende los barrios, **Sabalito, Heliconias, Libertad 2, Las Palmas, las Rosas, Divino Niño, Villa del Carmen, que por localización de tramos comprende el tramo # 1; comprende los barrios SABALITO – HELICONIAS, tramo # 2 comprende los barrios LIBERTAD 2 – LAS PALMAS – LAS ROSAS, y tramo # 3 comprende los barrios DIVINO NIÑO - VILLA DEL CARMEN**. Correspondiente al proyecto de descolmatación, donde se realizaron las actividades de levantamiento topográfico con Curvas de Nivel, objeto de la contratación.

Inicialmente se realiza el amarre GPS (Utilizar coordenadas de alta precisión y cota conocidas para dar referencias al resto de los puntos sobre el área a intervenir) al sistema de coordenadas Magna-Sirgas del I.G.A.C., por el sistema de Posicionamiento GNSS, A partir de nuestra línea base de salida se empezaron a realizar las actividades del levantamiento topográfico con curvas de nivel con la estación total y se adelantó la toma de detalles iniciales de los elementos relevantes y existentes.

Dado que el GPS calcula la altura orto métrica del lugar y que esta contiene una pequeña diferencia con la altura geométrica debido al geoide, se partió de la cota que obtuvimos de la lectura obtenida por GPS, punto de señal y partida azimutal.

INFORME DE OBRA

ANTECEDENTES Y ASPECTOS GENERALES

- Localización General:

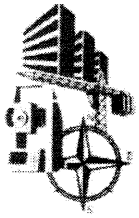

La ejecución total de las obras se realizó en el Municipio de Orito. Departamento del Putumayo.

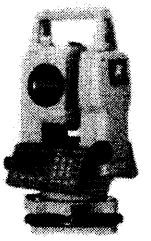

Coordenadas de Puntos Georreferenciados y Puntos base:

OBJETIVOS.

El principal objetivo es obtener planos topográficos veraces y fidedignos, mientras que el objetivo secundario es obtener Bench Marks o puntos de control en cantidad suficiente a fin de poder obtener planos precisos, para identificar a detalle la topografía del terreno y Área a intervenir con sus cotas y curvas detallando principalmente, estructuras existentes, Vías Proyectadas, cercos, esquinas, acequias, humedales, quebradas, bermas, reservorio, desagües, etc. Y así poder tener puntos de referencia con coordenadas geografías y cotas precisas para replantear los futuros trabajos, diseños e intervenciones de las obras a realizar.

- Realizar el levantamiento topográfico en forma clara y detallada de todos los elementos existentes, acorde a los lineamientos exigidos por contratista y requerimientos civiles y arquitectónicos, en cuanto a utilización de equipos, precisiones, calidades, formatos, toma de información, etc.
- Obtener una cartografía clara y precisa que describa las condiciones actuales del terreno a nivel planimétrico y altimétrico y sea la base suficiente para los diseños y construcciones futuras.

CONTROL Y SEGUIMIENTO DE LAS OBRAS

ZONAS DE TRABAJO: El proyecto se desarrolló con una comisión topográfica que se encontraba en constante comunicación, con funciones y actividades específicas a realizar. Cada uno de los integrantes de dicha comisión, mantuvo una actitud responsable y estuvo encargado del correcto desarrollo de las actividades planificadas, quienes informarían a su superior o a quien correspondiera alguna novedad, si llegara a ocurrir.

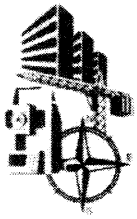

CALIDAD DE LAS OBRAS: La calidad de cada una de las actividades realizadas esta soportada por los equipos de última generación que proporcionan una alta precisión y mayor rendimiento en campo, así como las competencias y aptitudes de cada uno de los trabajadores que conforman la comisión de intervención topográfica.

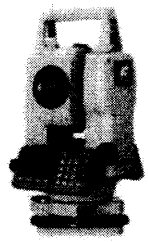

BITÁCORA DE PRODUCCIÓN, PROGRAMACIÓN, PROCEDIMIENTOS Y DOCUMENTACIÓN:

- Programación: Cada una de las actividades y labores que se desarrollaron, se encuentran contempladas en el cronograma y están previamente analizadas para dar culminación según lo esperado. Cabe de notar que durante el tiempo de intervención, a la hora de apertura, se recordó a los trabajadores la meta y los objetivos que se pretendían alcanzar durante la jornada laboral.

- Procedimientos: Dando cumplimiento y correcto desarrollo de las actividades según el cronograma presentado, se llevó estricto registro de cada procedimiento y actividad realizada durante el tiempo de intervención y ejecución del proyecto, con el fin de evaluar detalladamente el rendimiento obtenido, analizar los problemas o dificultades que se presentaran si las hubiese, para realizar el debido control y recuperar el atraso que pudiera llegar a presentarse.

- Registro de Obra y Documentación: el registro y Documentación de cada uno de los Procedimientos y actividades realizadas durante la ejecución del proyecto se llevó a cabo en el mes de mayo de 2021, mes en que se iniciaron las actividades de ubicación, reconocimiento del terreno y levantamiento topográfico.

LEVANTAMIENTO TOPOGRAFICO

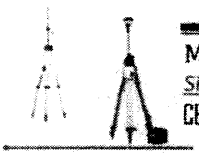

PUNTO DE INICIO DE INICIO DE OBRA

El reconocimiento de campo es importante para tener claro el objeto principal por el cual se realiza el estudio topográfico, donde se saca conclusiones e ideas claras para obtener desde la toma de información directa, un análisis claro y preciso para el desarrollo del proyecto a elaborar.

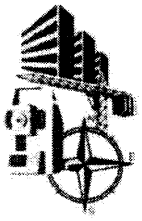

El levantamiento topográfico se refiere al establecimiento y lectura de puntos de control horizontal y vertical.

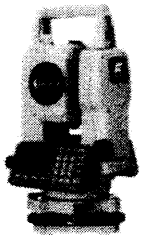

En efecto, se requiere por una parte una cantidad suficiente de puntos de control vertical e igualmente suficientes puntos de control horizontal para los casos de levantamiento, estudio, diseño, verificación y replanteo en el desarrollo del proyecto y para su posterior intervención y construcción.

Se han establecido **PUNTOS DE CONTROL HORIZONTAL Y VERTICAL** a lo largo y ancho del cauce de la Quebrada el Sábalo, específicamente en tres tramos identificados como críticos, para facilitar el recorrido, el manejo de la poligonal, el amarre a coordenadas con sus respectivas cotas, como también la localización de puntos auxiliares para el barrido de las radiaciones.

Trabajos de Campo Realizados en el Levantamiento:

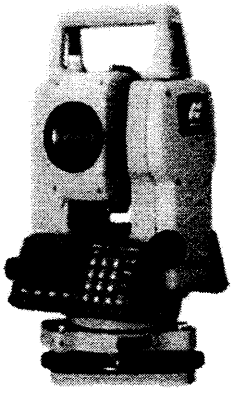

En función a la importancia de los estudios a ejecutarse, y dar cumplimiento de lo requerido en los términos de referencia; se han empleado equipos electrónicos de alta precisión como son las estaciones totales, en las que se han almacenado información codificada que luego es convertida en datos que se suministran a programas de cómputo para la elaboración de planos sectorizados en Sistema CAD.

Para el caso de las radiaciones de control se realizó con un equipo de estación total, básicamente para poder obtener niveles de error mínimos. Para ello, se tomaron lecturas de distancia repetida y en modo fino del instrumento lo que significa que en un intervalo de tiempo de 2,5 segundos por visada, utilizando de este tiempo el promedio de lecturas computarizadas, cada una de ellas, medidas con rayos infrarrojos de onda corta, el cual se afecta principalmente por la posición y el número de prismas utilizados. Además, se realizaron los ajustes por temperatura y la metodología resumida fue la siguiente:

Se ejecutó una poligonal abierta con medida directa, utilizándose para ello una estación total marca Topcom GTS 235w, de aproximación 5" con colector interno de información, cada medida se realizó en modo fino, en series de 2 visadas cada una, de las cuales el software de cálculo tomo el promedio final, de esta manera se reduce al mínimo el error del operador y logrando errores de cierre dentro de lo permitido por los términos de referencia los cuales son importantes a la hora de trasportar coordenadas y cotas.

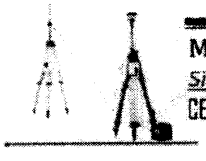

EQUIPO, HERRAMIENTAS Y PERSONAL DE TOPOGRAFIA UTILIZADO

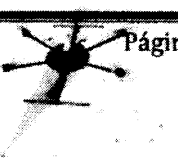

- ✓ Estación total marca, TOPCOM GTS 235W
- ✓ 2 porta prismas
- ✓ 2 miras telescópicas
- ✓ 1 trípodes
- ✓ 1 Plomada de 16 oz

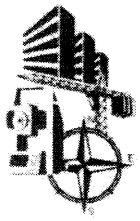

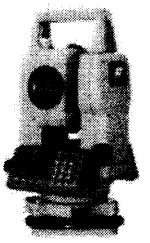

Herramientas y Equipo Auxiliar:

- ✓ Maceta
- ✓ Martillo
- ✓ Pintura
- ✓ Sombrilla
- ✓ Bote
- ✓ Neumático flotante
- ✓ Cinta de Señalización
- ✓ Botiquín de Primeros Auxilios
- ✓ Capas Impermeables (Protección de Equipos Principales)

- Personal de Apoyo en el Trabajo de Levantamiento Topográfico: La Descripción de las tareas, Funciones y Características del trabajo, fueron impartidas a cada una de las personas que laboró. Se utilizó el siguiente personal:

  - ✓ 1 topógrafo: Operadores de equipo topográfico
  - ✓ 3 Cadeneros

TRABAJO DE OFICINA

Procesamiento de la Información de Campo

Toda la información obtenida en campo se ha procesado empleando programas con un software de cálculo y trasmitida a la computadora a través del programa TOPCON LINK.

Esta información ha sido procesada por el módulo básico haciendo posible tener un archivo de radiaciones sin errores de cálculo, con su respectiva codificación de acuerdo a la ubicación de puntos.

Los puntos de las coordenadas al igual que la nube de puntos utilizada con la nomenclatura de TOP (topos), se procedió a modelar las superficies topográficas para finalmente obtener las curvas de nivel.

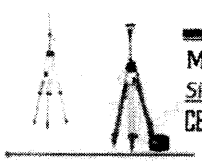

Estos trazos que generan los planos, han sido procesados en dibujos sectorizados en AutoCAD CIVILCAD, los archivos están en unidades métricas los puntos son incluidos como bloques en capas para poder identificar con facilidad los detalles de las radiaciones y controlarlas en tres tipos de información básica (número de punto norte, este, elevación, y descripción).

Se utilizó una hoja de cálculo que hizo posible utilizar el programa Excel y AutoCAD LAN, GLOBAL MAPPER Y GOOGLE EARTH.

COMPENSACIÓN

Debido al error de cierre lineal, las coordenadas calculadas deben corregirse mediante una compensación angular, que consiste en distribuir ese error proporcionalmente a la longitud de cada lado. Se usó la siguiente formula:

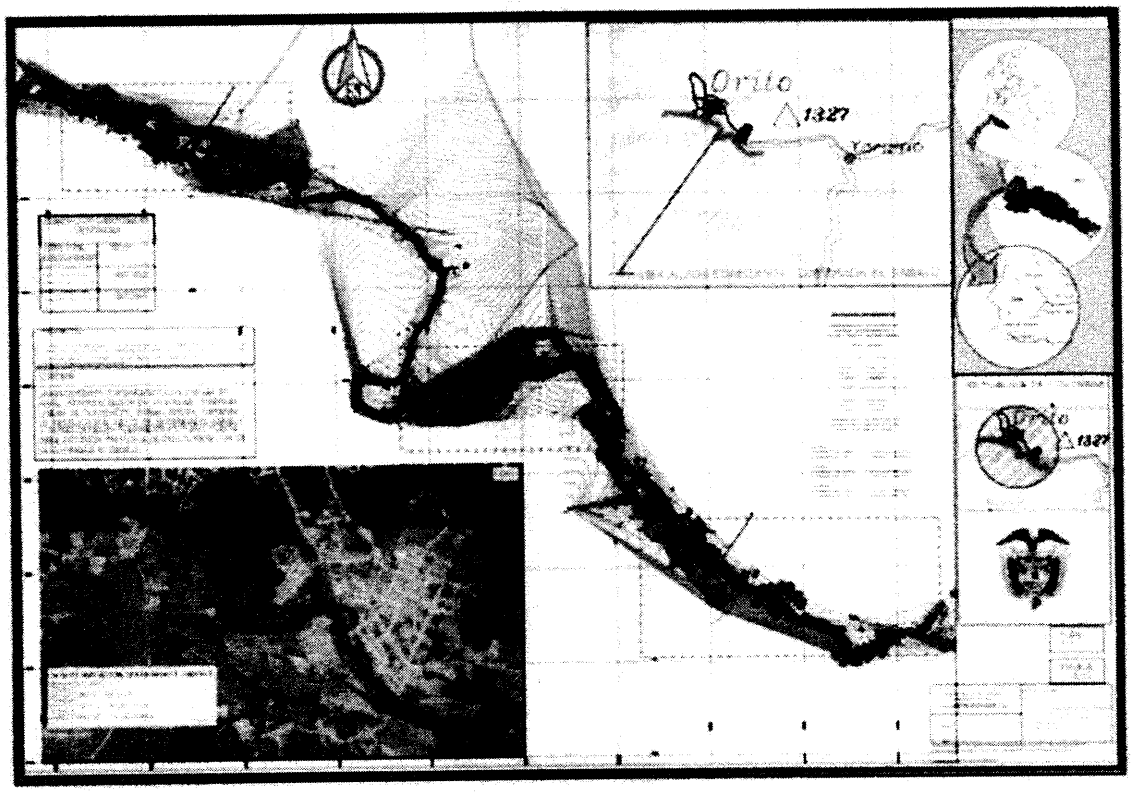

C= D/Sd x En o Ee
Donde:
D= Distancia de un Lado
Sd= Suma de las distancias o longitud poligonal
eN= Incremento o desplazamiento del Norte
eE= Incremento o desplazamiento del Este

PLANOS

Concluidos los cálculos se procedió a importar las poligonales con sus respectivas radiaciones y coordenadas corregidas para digitalizar en AutoCAD. Se presentan las láminas con el levantamiento topográfico que se ha utilizado.

Los planos presentados se encuentran por tramos definidos, identificando como:

TRAMO # 1: SECTOR SABALITO - HELICONIAS

Longitud de estudio: 620m

Volumen estimado de remoción: 6305.49m3

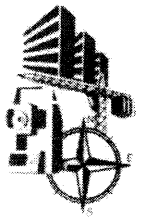

Volumen estimado de terraplenes: 6305.49m3

TRAMO # 2: SECTOR LIBERTAD 2 – LAS PALMAS – LAS ROSAS

Longitud de estudio: 750m

Volumen estimado de remoción en corte: 4957.46m3

Volumen estimado de terraplenes: 4957.46m3

Estos tramos se encuentran distribuidos por sectores por el grado de riesgo que tiene su cauce en los barrios mencionados, tanto por su concavidad, baja profundidad y por las cantidades de sedimentos, lo cual causa desbordamientos e inundaciones en época invernal.

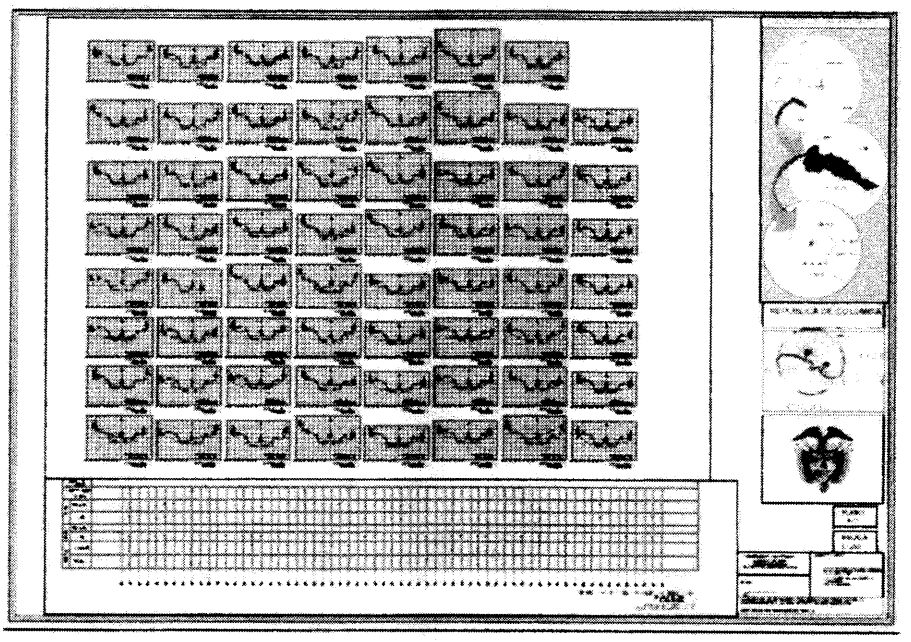

Estos tramos están debidamente referenciados teniendo:

Con base a estos datos obtuvimos los planos finales, secciones de cada tramo como los modelos siguientes.

ANEXOS 1. PDF Planos topográfico con curvas de nivel y secciones transversales

Cálculos de volúmenes de la descolmatación.

Los reportes de volúmenes de descolmatación se presentan como anexos al final del informe, al igual que las imágenes de localización y la cartera de puntos geométricos de la topografía. En ellos se evidencia el cálculo por sección transversal y diferencia de áreas por longitud para la descolmatación de cada uno de los tramos del proyecto, dándonos el valor neto en metros cúbicos para la elaboración de nuestro proyecto.
