EDGE PAD

Our heavy-duty edge pad, made from rugged 24-oz #4 canvas protects ropes from abrasion and helps keep them clean, increasing their life. It also reduces the amount a rope digs into a soft edge, such as the berm of a road. Our improved design replaces metal grommets and uses strong integrated corner web loops that allow for anchoring in place when needed. The pads also feature a set of additional offset web loops, allowing overlap when joining two or more pads to extend coverage. Pads work well over most edges and also protects when wrapped around trees, rails and beams.
