TITANIUM RESCUE LITTER

Tapered with StratLoad™ Attachment Points

Amazingly strong and light, lift our ultra-lightweight Titanium Litter with one hand and you'll have to have one. Built to the same specifications and dimensions as our stainless litters, the titanium model is lighter by 18 pounds. Like the stainless steel models, the titanium models have Durathene™ netting, molded high-density polyethylene back support and come with four litter straps.

UL Classified to NFPA Standards – Litter
Vertical Breaking Strength: 24.9 kN (5,598 LBF)
Horizontal Breaking Strength: 13.7 kN (3,080 LBF)

Rescue Litter Specifications:

Length: 212 cm (83.5 in)
Width: 58 cm (23 in)
Depth: 18 cm (7.25 in)
Load Rating: 11 kN (2,473 lbf)

StratLoad™ Attachment Points
The patented StratLoad Attachment Points for our litters allow any size carabiner to be used to attach a lifting bridle while keeping both the carabiners and the lifting bridle on the inside of the litter's top rail. This provides protection from abrasion along cliff faces and building walls. The StratLoad feature also prevents cross gate and side loading of carabiners and orients the direction of pull along the spine of the carabiner, where it is strongest. StratLoads are 1/4 in (6mm) thick with a fullround radius on the inside edge, allowing the option of a soft attachment, which is then protected by the top railing. StratLoads are now standard on all stainless and titanium litters.

Flat Rate Shipping Charges
For shipping within the contiguous US, there is a $250 flat rate shipping fee per item. For shipping to Alaska or Hawaii, there is a $430 flat rate shipping fee per item. Please allow additional time for delivery.
