UltraPure™ Guanidine Hydrochloride is a strong protein denaturant. In a highly concentrated (5 to 6 M) guanidine hydrochloride solution, many proteins unfold and separate into their constituent polypeptide chains. Guanidine hydrochloride is widely used to purify nucleic acids from cell extracts. It is useful as an RNase inhibitor during the isolation of mRNA from mammalian cells.

For Research Use Only. Not for use in diagnostic procedures.

Specifications

For Use With (Application)	RNA Extraction
Packaging Type	Bottle
Product Line	UltraPure
Product Type	Guanidine Hydrochloride
Purity	DNase-Free, RNase-Free
Quantity	500 g
Shipping Condition	Approved for shipment at Room Temperature or on Wet Ice
Form	Powder
Unit Size	Each

Contents & Storage

Store at room temperature.
